FEDERAL PUBLIC SERVICE COMMISSION

COMPETITIVE EXAMINATION FOR RECRUITMENT TO POSTS IN BS-17 UNDER THE FEDERAL GOVERNMENT, 2013

Roll Number

GEOLOGY, PAPER-I

TIM	E ALLO	OWED:	(PART-I	MCQs)	30 MINUTES		MAXIM	UM MARKS: 20
	EE HO		(PART-II)		2 HOURS & 30	MINUTES	MAXIM	UM MARKS: 80
NOT	E: (i)	First a	ttempt PAR	T-I (MCQ	s) on separate O	MR Answer Shee	et which sh	all be taken back
		after 30	minutes.		-			
	(ii)	Overw	riting/cuttir	ng of the op	tions/answers wi	ll not be given cre	edit.	
				PART-I	((MCQs) (CO	MPULSORY)		
0.1. ((i) Sele	ct the be	st option/ans	swer and fill	in the appropriat	e Circle on the (OMR Ansv	ver Sheet. (20x1=2
_			-			eet, shall not be co		`
	•	Ū	•					
1.			principle of u		mism: have operated in th	a nact		
				•	at the same rate as	•		
					rm solar nebula	incy do today		
					magma ocean	(e) None of the	se	
2.						` '		" of a metamorphic
	rock?	•	C			<i>3</i> 31	•	1
	(a) Se	dimentary	y (b) I	gneous (c) Metamorphic	(d) All of these	(e)	None of these
3.					ospheric plate move			
			timetres per y	,) Several centime	¥ •		
			timetres per h	our (d) Several centime	tres per second	(e)	None of these
4.	Minera		1:C		(I-) A	1'.1- (-) II		
						e solids (c) Have a occurs naturally		
5.		•			as folig as that state s include all except	•	(e) Nolle of	uiese
٥.					eans (b) Distribu			
			of earthquak) Distribution of 1		(e)	All are correct
6.			arth is current	ly thought to	be:	-	. ,	
) years old	(b) About 6 billion	years old (c) Abo	out 4,500,000) years old
	(d) At	out 4,500),000,000 yea	rs old (e	None of these			•
7.					following types of			
		_	plate boundar	, ,	0 1	ndaries (c) Trai	nsform fault	plate boundaries
0			nd Converger	nt plate bound	daries (e)	None of these		
8.		ic rock is:		amantation o	of tuon an autod ausin	~		
			ned from evap		of transported grain	s Transformed by hea	t into limast	one
			d by pressure			None of these	t into innesti	one
9.			• •		l a conglomerate:	t tone of these		
					omerates are fine g	rained		
	(b) Co	onglomera	ates are coarse	e grained and	breccias are fine g	rained		
				•	•	e angular fragments		
						rounded fragments	(e) None of these
10.	-		_		creased temperature	-	·	
	` '		usive heat sou			Impact metamorphis	sm	
			_		easing depth of buri			
11.			ease rate of ra		etamorphism of a s	None of these		
11.			•		ay minerals breakd			
			-	_	rain size of the min			
			sing metamor	_		0-00 011111101		
					mount of water dec	reases. (e) Non	ne of these	
12.						edimentary bedding?		
	(a) Se	dimentary	y bedding is re	equired in or	der for a rock to de	velop metamorphic f	foliation	
						terms for the same p	henomenon	
		-	-	_	c foliation are gene			() >
	(d) Th	iere is no i	regular relation	onship betwe	en sedimentary bed	ding and metamorpl	nic toliation	(e) None of these

GEOLOGY, PAPER-I

13.		isconformity is A rock unit that does not contain fossils											
		An erosional surface between igneous and metamorphic rocks											
		An erosional surface between horizontal sedimentary rocks											
14.		An erosional surface between different rock types (e) None of these at is the name for an erosion surface that separates two sets of sedimentary layers with non-parallel bedd	ling										
	plane	nes?	0										
		Cross bedding (b) Formation (c) Fault unconformity Angular unconformity (e) None of these											
15.		w do rock particles move during the passage of a P-wave through the rock?											
	(a)	Back and forth parallel to the direction of wave travel											
		Perpendicular to the direction of wave travel (c) In a rolling elliptical motion (a) Name of these											
16.		In a rolling circular motion (e) None of these ich of the following statement is false:											
	(a)	Most earthquakes occur at plate boundaries											
		The time and location of most major earthquakes can be predicted several days in advance											
		Earthquakes can be caused by normal, reverse and strike-slip faulting P-waves travel faster than both S-waves and Surface waves (e) None of these											
17.		ich of the following statement about rock deformation is false?											
		Deep crustal rocks are more likely to deform ductily than shallow crustal rocks											
		Hotter rocks are more likely to deform ductily than cooler rocks Most sedimentary rocks are more deformable than igneous rocks											
		Rocks under low confining pressure are more likely to deform ductily than rocks under high confin	iing										
10		pressure (e) None of these	~ ~ £										
18.	II the	ne sedimentary rocks on a geologic map form a zigzag pattern, the underlying structure probably consists	s O1										
		Horizontal anticlines and synclines (b) Plunging anticlines and synclines											
19.	. ,	Domes and basin (d) Strike slip faults (e) None of these	oult										
17.		ault plane strikes north-south and dips steeply to the west. Geologic observations indicate that most of the favement was vertical and that Mesozoic rocks occur east of the fault and Paleozoic rocks occur west of											
	fault.	t. What type of fault is this?											
		Normal (b) A right lateral strike slip (c) Reverse All of these (e) None of these											
20.		ich of the following types of tectonic forces tends to push two sides of a body in opposite directions so t	that										
	they	slide horizontally past one another?											
	(a)	Tensional forces (b) Shearing forces (c) Compressive forces (d) None of these											
		<u>PART-II</u>											
NOTE	. ,	Part-II is to be attempted on the separate Answer Book.											
	. ,												
		Attempt ONLY FOUR questions from PART-II. ALL questions carry EQUAL marks. Extra attempt of any question or any part of the attempted question will not be considered.											
	(21)	2 Entire enterprise any question of any part of the entempted question will not be considered.											
Q. No	2.	Discuss three types of collision of Plate boundaries with reference to Plate system of											
			20)										
Q. No	0.3.	How the Earthquake is located? How the destruction was made by earthquake in 2005 in Pakistan? Discuss briefly.	20)										
Q. No).4.	Differentiate Structural Geology and Tectonics. Enlist classification of fault based on Slip and attitude of fault and attitude of strata with brief description and diagrams.	20)										
Q. No	5. 5.	Describe the tertiary succession of lower Indus Basin. (2	20)										
Q. No		How minerals are classified? Discuss and enlist the classification of minerals other											
		than silicate.	20)										
Q. No	5.7.	What do you understand by Sedimentary Environment? Discuss in details the Marine											
	•		20)										
Q. No). 8 .		20)										
		 (a) Present is key to the past (b) Stages of deformation (c) Stratigraphy of Khewra Gorge (d) Kinds of unconformities 											
		(e) Mechanism of metamorphism (f) Hardness of the minerals and scale
