A UNIVERSITY
GRAMMAR OF ENGLISH

RANDOLPH QUIRK University of London
SIDNEY GREENBAUM University of London

Based on A Grammar of Contemporary English
by Randolph Quirk, Sidney Greenbaum,
Geoffrey Leech, Jan Svartvik
fresh headway can be made. We have indeed precisely this double relation with *A Grammar of Contemporary English*: as well as producing an epitome of the larger work, we have taken the opportunity to improve the description in numerous respects. In this way, we have made the labour of the present enterprise as fruitful and stimulating to ourselves as we hope it will be rewarding to our students.

June 1973

PREFACE TO FIFTH IMPRESSION

For the hundreds of improvements incorporated since the first impression, we are in large measure indebted to colleagues all over the world who have presented us with detailed comments, whether in published reviews or in private communications. In particular, we should like to express our gratitude to Broder Carstensen, D. Crystal, R. Dirven, V. Fried, G. Guntram, R. R. K. Hartmann, R. A. Hudson, Y. Ikegami, R. Ilson, S. Jacobson, H. V. King, R. B. Long, André Moulin, Y. Murata, N. E. Osselton, M. Rensky, M. L. Samuels, Irène Simon, B. M. H. Strang, Gabriele Stein, M. Swan, J. Taglicht, and R. W. Zandvoort.

SYMBOLS AND TECHNICAL CONVENTIONS

Since our use of symbols, abbreviations, and the like follows standard practice, all that we need here is a visual summary of the main conventions, with a brief explanation or a reference to where fuller information is given.

4.37; App I.12:
Cross-references are given by chapter (or appendix) and section number.

AmE, BrE:
American English, British English (cf 1.6).

S, V, O, A, O, etc.:
See 2.5 ff; when italicized, strings of these symbols refer to the clause types explained in 7.2.

A better Grammar:
Capitals in examples indicate nuclear syllables, accents indicate the intonation, raised verticals indicate stress, and long verticals tone unit boundaries: see App II.2 ff, 7 ff.

*A more better one:
A preceding asterisk indicates an unacceptable structure.

?they seem fools:
A preceding question mark indicates doubtful acceptability; combined with an asterisk it suggests virtual unacceptability.

Help me (to) write:
Parentheses indicate optional items.

Bolinger (1971):
References at the end of a chapter are expanded in the Bibliography, pp 462 ff.

He came {to} London
{from} New York
Curved braces indicate free alternatives.

Symbols and technical conventions

[He] does [his] best:
Square brackets indicate contingent alternatives: eg selection of the top one in the first pair entails selection of the top one in the second also.

{His [expensive (house insurance)]}:
Contrasts in bracketing give a linear indication of hierarchical structure.

/æ/, /ɔ/, /ʌ/:
Slants enclose phonemic transcriptions, usually of inflections. The symbols have widely familiar values: /æ/ as in bid, /ɔ/ as in beat, /ʌ/ as in zip, /ʌ/ as in the first syllable of alone, etc.
1.1 Variety classes
There are numerous varieties of the English language, and what we ordinarily mean by 'English' is a common core or nucleus which is realized only in the different forms of the language that we actually hear or read. We can distinguish six kinds of varieties ranged as below and interrelated in ways we shall attempt to explain.

**THE COMMON CORE OF ENGLISH**

The fact that in this figure the 'common core' dominates all the varieties means that, however esoteric or remote a variety may be, it has running through it a set of grammatical and other characteristics that are common to all. From this initial point onwards, it is claimed by the sets
of braces that each variety class is related equally and at all points to
each of the other variety classes. We shall however return and make
qualifications to this claim. The classes themselves are arranged in a
meaningful order and the justification will become clear in what
follows.

Regional variation
1.2
Varieties according to region have a well-established label both in popu-
lar and technical use: 'dialects'. Geographical dispersion is in fact the
classic basis for linguistic variation, and in the course of time, with poor
communications and relative remoteness, such dispersion results in dia-
lects becoming so distinct that we regard them as different languages.
This latter stage was long ago reached with the Germanic dialects that
are now Dutch, English, German, Swedish, etc, but it has not been
reached (and may not necessarily ever be reached, given the modern ease
of communication) with the dialects of English that have resulted from
the regional separation of English-speaking communities both within
the British Isles and throughout the world.

Regional variation seems to be realized predominantly in phonology.
That is, we generally recognize a different dialect from a speaker's pro-
nunciation before we notice that his vocabulary (or lexicon) is also
distinctive. Grammatical variation tends to be less extensive and cer-
tainly less obtrusive. But all types of linguistic organization can readily
enough be involved.

1.3
It is pointless to ask how many dialects of English there are: there are
indefinitely many, depending solely on how detailed we wish to be in our
observations. But they are of course more obviously numerous in the
long-settled Britain than in the more recently settled North America or
in the still more recently settled Australia and New Zealand. The degree
of generality in our observation depends crucially upon our standpoint
as well as upon our experience. An Englishman will hear an American
Southerner primarily as an American and only as a Southerner in addition
if further subclassification is called for and if his experience of American
English dialects enables him to make it. To an American the same spea-
ker will be heard first as a Southerner and then (subject to similar con-
ditions) as, say, a Virginian, and then perhaps as a Piedmont Virginian.
One might suggest some broad dialectal divisions which are rather
generally recognized: Within North America, most people would be able
to distinguish Canadian, New England, Midland, and Southern varieties
of English. Within the British Isles, Irish, Scots, Northern, Midland,

1.5 Standard English
Welsh, South-western, and London varieties would be recognized with
similar generality. Some of these – Irish and Scots for example – would
be recognized as such by many Americans and Australians too, while in
Britain many people could make subdivisions: Ulster and Southern
might be distinguished within Irish, for example, and Yorkshire picked
out as a subdivision of northern speech. British people can also, of
course, distinguish North Americans from all others (though not usually
Canadians from Americans), South Africans from Australians and
New Zealanders (though mistakes are frequent), but not usually
Australians from New Zealanders.

1.4 Education and social standing
Within each of the dialect areas, there is considerable variation in speech
according to education and social standing. There is an important
polarity of uneducated and educated speech in which the former can be
identified with the regional dialect most completely and the latter moves
away from dialectal usage to a form of English that cuts across dialectal
boundaries. On the other hand, there is no simple equation of dialectal
and uneducated English. Just as educated English cuts across dialectal
boundaries, so do many features of uneducated use: a prominent exa-
ample is the double negative as in I don't want no cake, which has been
outlawed from all educated English by the prescriptive grammar trad-
ition for hundreds of years but which continues to thrive in uneducated
speech wherever English is spoken.

Educated speech – by definition the language of education – naturally
tends to be given the additional prestige of government agencies, the
teaching professions, the political parties, the press, the law court and the
pulpit – any institution which must attempt to address itself to a public
beyond the smallest dialectal community. The general acceptance of
'BBC English' for this purpose over almost half a century is paralleled
by a similar designation for general educated idiom in the United States,
'network English'. By reason of the fact that educated English is thus
accorded implicit social and political sanction, it comes to be referred to
as Standard English, and provided we remember that this does not mean
an English that has been formally standardized by official action, as
weights and measures are standardized, the term is useful and appro-
priate. In contrast with Standard English, forms that are especially asso-
ciated with uneducated (rather than dialectal) use are often called
'substandard'.

1.5 Standard English
The degree of acceptance of a single standard of English throughout the
world, across the multiplicity of political and social systems, is a truly remarkable phenomenon: the more so since the extent of the uniformity involved has, if anything, increased in the present century. Uniformity is greatest in what is from most viewpoints the relatively unimportant matter of spelling. Although printing houses in all English-speaking countries retain a tiny area of individual decision (some preferring -ise and others -ize in words like realise; some preferring judgment and others judgement; etc), there is basically a single system, with two minor subsystems. The one is the subsystem with British orientation (used in all English-speaking countries except the United States) with distinctive forms in only a small class of words, colour, centre, levelled, etc. The other is the American subsystem: color, center, leveled, etc. In Canada, the British subsystem is used for the most part, but some publishers (especially of popular material) follow the American subsystem and some a mixture (color but centre). In the American Mid-West, some newspaper publishers (but not book publishers) use a few additional separate spellings such as thru for through.

In grammar and vocabulary, Standard English presents somewhat less of a monolithic character, but even so the world-wide agreement is extraordinary and — as has been suggested earlier — seems actually to be increasing under the impact of closer world communication and the spread of identical culture, both material and non-material. The uniformity is especially close in neutral or formal styles (1.12) of written English (1.11) on subject matter (1.10) not of obviously localized interest: in such circumstances one can frequently go on for page after page without encountering a feature which would identify the English as belonging to one of the national standards.

National standards of English
1.6
British and American English

There are two national standards that are overwhelmingly predominant both in the number of distinctive usages and in the degree to which these distinctions are "institutionalized": American English and British English. Grammatical differences are few and the most conspicuous are widely known; the fact that AmE has two past participles for get and BrE only one (3.14), for example, and that in BrE the indefinite pronoun one is repeated in co-reference where AmE uses he as in

One cannot succeed at this unless he tries hard

Lexical examples are far more numerous, but many of these are familiar to users of both standards: for example, railway (BrE), railroad (AmE); tap (BrE), faucet (AmE); autumn (BrE), fall (AmE). More recent lexical innovations in either area tend to spread rapidly to the other. Thus while radio sets have had valves in BrE but tubes in AmE, television sets have cathode ray tubes in both, and transistors are likewise used in both standards.

1.7
Scotland, Ireland, Canada

Scots, with ancient national and educational institutions, is perhaps nearest to the self-confident independence of BrE and AmE, though the differences in grammar and vocabulary are rather few. Irish (or Hiberno-) English should also be regarded as a national standard, for though we lack descriptions of this long-standing variety of English it is consciously and explicitly regarded as independent of BrE by educational and broadcasting services. The proximity of Britain, the easy movement of population, and like factors mean however that there is little room for the assertion and development of separate grammar and vocabulary.

Canadian English is in a similar position in relation to AmE. Close economic, social, and intellectual links along a 4000-mile frontier have naturally caused the larger community to have an enormous influence on the smaller, not least in language. Though in many respects Canadian English follows British rather than United States practice, in many other respects it has approximated to AmE and seems likely to continue in this direction.

1.8
South Africa, Australia, New Zealand

South Africa, Australia and New Zealand are in a very different position, remote from the direct day-to-day impact of either BrE or AmE. While in orthography and grammar the South African English in educated use is virtually identical with BrE, rather considerable differences in vocabulary have developed.

New Zealand English is more like BrE than any other non-European variety, though it now feels the powerful influence of Australia and — to no small degree — of the United States. Australian English is undoubtedly the dominant form of English in the Antipodes, and it is even exerting an influence in the northern hemisphere, particularly in Britain, though much of what is distinctive in Australian English is confined to familiar use.

1.9
Pronunciation and Standard English

This list does not exhaust the regional or national variants that approximate to the status of a standard (the Caribbean might be mentioned, for
example), but the important point to stress is that all of them are remarkable primarily in the trivial extent to which even the most firmly established, BrE and AmE, differ from each other in vocabulary, grammar, and spelling. We have been careful, however, not to mention pronunciation in this connection. Pronunciation distinguishes one national standard from another most immediately and completely, and links in a most obvious way the national standards to the regional varieties.

In BrE, one type of pronunciation comes close to enjoying the status of ‘standard’: ‘Received Pronunciation’ or ‘RP’. Because this has been largely associated with a private education system based upon boarding schools insulated from the locality in which they happen to have been situated, it is significantly non-regional and of considerable prestige. But RP no longer has the unique authority it had in the first half of the twentieth century.

1.10 Varieties according to subject matter

Varieties according to the subject matter involved in a discourse are sometimes referred to as ‘registers’. While one does not exclude the possibility that a given speaker may choose to speak in a national standard at one moment and in a regional dialect use next — and possibly even switch from one national standard to another — the presumption has been that an individual adopts one of the varieties so far discussed as his permanent form of English. With varieties according to subject matter, on the other hand, the presumption is rather that the same speaker has a repertoire of varieties and habitually switches to the appropriate one as occasion arises. Most typically, perhaps, the switch involves nothing more than turning to the particular set of lexical items habitually used for handling the subject in question: law, cookery, engineering, football.

Although in principle the type of language required by a particular subject matter would be roughly constant against the variables already discussed (dialect, national standard), the use of a specific variety of one class frequently presupposes the use of a specific variety of another. A well-formed legal sentence, for example, presupposes an educated variety of English.

1.11 Varieties according to medium

The only varieties according to medium that we need to consider are those conditioned by speaking and writing respectively. Most of the differences involved arise from two sources. One is situational: the use of a written medium normally presumes the absence of the person(s) to whom the piece of language is addressed. This imposes the necessity of a far greater explicitness: the careful and precise completion of a sentence, rather than the odd word, supported by gesture, and terminating when the speaker is assured by word or look that his hearer has understood.

The second source of difference is that many of the devices we use to transmit language by speech (stress, rhythm, intonation, tempo, for example) are impossible to represent with the crudely simple repertoire of conventional orthography. They are difficult enough to represent even with a special prosodic notation: cf App II. This means that the writer has often to reformulate his sentences if he is to convey fully and successfully what he wants to express within the orthographic system.

1.12 Varieties according to attitude

Varieties according to attitude are often called ‘stylistic’, but ‘style’ like ‘register’ is a term which is used with several different meanings. We are here concerned with the choice of linguistic form that proceeds from our attitude to the sender (or reader), to the subject matter, or to the purpose of our communication. And we postulate that the essential aspect of the non-linguistic component (that is, the attitude) is the gradient between stiff, formal, cold, impersonal on the one hand and relaxed, informal, warm, friendly on the other. It is useful to pursue the notion of the ‘common core’ (1.1) here, so that we can acknowledge a neutral or unmarked variety of English, bearing no obvious colouring that has been induced by attitude. On each side of this, we can then distinguish sentences containing features that are markedly formal or informal. In this book, we shall for the most part confine ourselves to this three-term distinction, leaving the middle one unlabelled and specifying only usages that are relatively formal or informal:

(rigid~) formal ~(neutral) informal (~familiar)

1.13 Varieties according to interference

Varieties according to interference should be seen as being on a very different basis from the other types of variety discussed. In this case, we refer to the trace left by someone’s native language upon the foreign language he has acquired. Thus, the Frenchman who says ‘I am here since Thursday’ is imposing a French grammatical usage on English; the Russian who says ‘There are four assistants in our chair of mathematics’ is imposing a Russian lexico-semantic usage on the English word ‘chair’. But there are interference varieties that are so widespread
Varieties of English

in a community and of such long standing that they may be thought stable and adequate enough to be regarded as varieties of English in their own right rather than stages on the way to a more native-like English. There is active debate on these issues in India, Pakistan and several African countries, where efficient and fairly stable varieties of English are prominent in educated use at the highest political and professional level.

1.14
Relationship between variety classes
In presenting the table of varieties in a schematic relationship (1.1), reference was made to each stratum of varieties being equally related to all others. But, as we have seen, there are limitations to this. Since writing is an educated art, we shall not expect to find other than educated English of one or other national standard in this medium. Indeed, when we try on occasion to represent regional or uneducated English in writing, we realize how narrowly geared to Standard English are our graphic conventions. For the same reason there are some subjects that can scarcely be handled in writing and others (eg legal statutes) that can scarcely be handled in speech.

Attitudinal varieties have a great deal of independence in relation to other varieties: it is possible to be formal or informal on biochemistry or politics in AmE or BrE, for example. But informal or casual language across an ‘authority gap’ or ‘seniority gap’ (a student talking to an archbishop) presents difficulties, and on certain topics (funerals) it would be unthinkably distasteful. An attempt at formal or rigid language when the subject is courtship or football would seem comic at best.

Our approach in this book is to keep our sights firmly fixed on the common core which constitutes the major part of any variety of English, however specialized, and without which fluency in any variety at a higher than parrot level is impossible. Only at points where a grammatical form is being discussed which is associated with a specific variety will mention be made of the fact that the form is no longer of the common core. The varieties chiefly involved on such occasions will be AmE and BrE; speech and writing; formal and informal.

1.15
Varieties within a variety
Two final points need to be made. First, the various conditioning factors (region, medium, attitude, for example) have no absolute effect: one should not expect a consistent all-or-nothing response to the demands of informality or whatever the factor may be. The conditioning is real but relative and variable. Secondly, when we have done all we can to account for the choice of one rather than another linguistic form, we are still left with a margin of variation that cannot with certainty be explained in terms of the parameters set forth in 1.1 and discussed in subsequent paragraphs.

For example, we can say (or write)

He stayed a week  or  He stayed for a week
Two fishes  or  Two fish
Had I known  or  If I had known

without either member of such pairs being necessarily linked to any of the varieties that we have specified. We may sometimes have a clear impression that one member seems rarer than another, or relatively old-fashioned, but although a rare or archaic form is likelier in relatively formal rather than in relatively informal English, we cannot always make such an identification. All societies are constantly changing their languages with the result that there are always coexistent forms, the one relatively new, the other relatively old; and some members of a society will be temperamentally disposed to use the new (perhaps by their youth) while others are comparatively inclined to the old (perhaps by their age). But many of us will not be consistent either in our choice or in our temperamental disposition. Perhaps English may give rise to such fluctuation more than some other languages because of its patently mixed nature: a basic Germanic wordstock, stress pattern, word-formation, inflection and syntax overlaid with a classical and Romance wordstock, stress pattern, word-formation – and even inflection and syntax. The extent to which even highly educated people will treat the Latin and Greek plurals in data and criteri as singulars or will use different to and averse to rather than different from and averse from – and face objections from other native speakers of English – testifies to the variable acknowledgment that classical patterns of inflection and syntax (Latin differre ab, ‘to differ from’; averse from) apply within English grammar. It is one of the senses in which English is to be regarded as the most international of languages and it adds noticeably to the variation in English usage with which a grammar must come to terms.

Bibliographical Note
On varieties of English, see Crystal and Davy (1969); McDavid-Menken (1963); Quirk (1972); Turner (1973).
The purpose of this chapter is to explore certain outstanding features of English structure in such a way as to provide, as it were, a small-scale map of areas that will be viewed in much greater detail in later chapters. As with any small-scale map, a great many features will be ignored and complicated contours will be smoothed out. The reader’s attention will not be distracted even by forward references to the parts of the book in which the focus will allow such complication to become visible. But to compensate for the disadvantages in this degree of oversimplification, we have hoped to achieve the advantages of the geographical analogue as well. In other words, we have tried to provide enough broad information to enable the reader to understand—and place in a wider context—the more detailed discussion that subsequent chapters involve.

### Parts of a sentence

#### 2.2 Subject and predicate

In order to state general rules about the construction of sentences, it is constantly necessary to refer to smaller units than the sentence itself. Our first task must therefore be to explain what these smaller units are that we need to distinguish, confining our attention for the present to a few sentences which, though showing considerable variety, are all of fairly elementary structure.

Traditionally, there is a primary distinction between **subject** and **predicate**:

- **John** carefully searched the room  
- **The girl** is now a student at a large university  
- **His brother** grew happier gradually  
- **It** rained steadily all day  
- **He** had given the girl an apple  
- **They** make him the chairman every year

#### 2.3 Operator, auxiliary, and predication

Although such a division obviously results in parts which are (in these examples) very unequal in size and dissimilar in content, it is of course by no means arbitrary. The subject of the sentence has a close general relation to ‘what is being discussed’, the ‘theme’ of the sentence, with the normal implication that something new (the predicate) is being said about a ‘subject’ that has already been introduced in an earlier sentence. This is of course a general characteristic and not a defining feature: it is patently absurd in relation to sentence [4], for example. Another point is that the subject determines concord. That is, those parts of the verb that permit a distinction between singular and plural, the form selected depends on whether the subject is singular as in [2], _the girl is_, or plural as in [6], _they make_.

Furthermore, the subject is the part of the sentence that changes its position as we go from statement to question:

Had he given the girl an apple?  

In contrast with the subject, there are few generalizations that we can usefully make about the predicate since—as our examples have illustrated—it tends to be a more complex and heterogeneous unit. We need to subdivide it into its elements or constituents. One division has already been suggested; this distinguishes **auxiliary** as operator (as in [5q]) from what we may call the **predication**. The distinctions may be illustrated as follows:

- **sentence**
  - **subject**
  - **predicate**
    - **auxiliary** as operator
      - **He** had given the girl an apple
    - **predication**
      - **had**

This particular division of the sentence helps us to understand, for example, how interrogative and negative sentences are formed, how certain adjuncts are positioned, and how certain types of emphasis are achieved.

2.4

Range of operators
The verb expression may have several auxiliaries; eg

He should have been questioned by the police

In such cases, it is the first auxiliary that acts as operator:

Should he have been questioned by the police?
No, he shouldn't have been questioned by the police.
Yes, he should.

Where the verb expression has no auxiliary in the positive declarative sentence, do is introduced when an operator is required:

It rained steadily all day.
Did it rain steadily all day?
No, it didn’t.

The verb be can act as operator whether it is an auxiliary, as in

John is searching the room ~ Is John searching...?
or not, as in

The girl is now a student ~ Is the girl now...?

The same is true to some extent (especially in BrE) for have:

He has a degree ~ Has he a degree?

2.5

Sentence elements
A sentence may alternatively be seen as comprising five units called elements of sentence (or, as we shall see below, clause) structure: subject, verb, complement, object, adverbial, here abbreviated as S, V, C, O, A:

John (S) carefully (A) searched (V) the room (O) [1]
The girl (S) is (V) now (A) a student (C) at a large university (A) [2]
His brother (S) grew (V) happier (C) gradually (A) [3]
It (S) rained (V) steadily (A) all day (A) [4]
He (S) had given (V) the girl (O) an apple (O) [5]
They (S) make (V) him (O) the chairman (C) every year (A) [6]

We shall see in 2.11 that considerable variety is possible in realizing each element of structure. Indeed S, O, and A can themselves readily have the internal constituents of sentences:

She (S) saw (V) that it (S) rained (V) all day (A) (O) [7]
His brother (S) grew (V) happier (C) when his friend (S) arrived (V) (O) [8]

2.6

Complements and objects
That [she (S) answered (V) the question (O) correctly (A)] (S) pleased (V) him (O) enormously (A) [9]
The italicizing is intended to emphasize the similarity between subordinate (or dependent) clauses and independent sentences. At the same time this and the bracketing can interestingly suggest that when in [8] and that in [7] and [9] operate as A, O, and S respectively (though this is only partly true) while more importantly being themselves “expanded” by the dependent clauses.

2.6

Complements and objects
The relation between the room in illustration [1] and the other elements in that sentence is very different from the relation between the girl in [5] and its fellow elements, though both are labelled ‘object’. Even more obviously, perhaps, the two elements labelled ‘object’ in [5] play sharply distinct roles in this sentence. We need in fact to distinguish two types of object and two types of complement in the sentences so far illustrated:

object { direct object (O_d) [1] } indirect object (O_i) [5]
complement { subject complement (C_s) [2] } object complement (C_o) [3]

The direct object is illustrated in

John carefully searched the room (O_d) [1]
He had given the girl an apple (O_i) [5]

The direct object is by far the more frequent kind of object, and (with certain outstanding exceptions) it must always be present if there is an indirect object in the sentence:

He had given the girl (O_i) an apple [5]

As here, the indirect object almost always precedes the direct object; it is characteristically (though by no means always) a noun referring to a person, and the semantic relationship is often such that it is appropriate to use the term ‘recipient’. Loosely, one might say in most cases that something (the direct object) tends to be done for (or received by) the indirect object.

Turning to complements, we may illustrate first the subject complement:

The girl is now a student (C_s) at a large university [2]
His brother grew happier (C_o) gradually [3]
Here the complements have a straightforward relation to the subjects of their respective sentences such that the subject of [2] is understood as being a 'girl student' and the subject of [3] a 'happier brother'. The 'object complement' can be explained as having a similar relation to a direct object (which it follows) as the subject complement has to a subject:

They make him the chairman (C₆) every year [6]

That is to say, the direct object and object complement in this example, 'him the chairman', correspond to the subject and subject complement in

He is the chairman (C₄)

Categories of verb

2.7

There are different types of verb corresponding closely to the different types of object and complement. Sentences such as [2] and [3], which have subject complements, have intensive verbs and all other sentences have extensive verbs. The latter are intransitive if as in

It rained steadily all day [4]

they do not permit any of the four object and complement types so far distinguished. Extensive verbs are otherwise transitive. All transitive verbs take a direct object; some, like give in [5], permit an indirect object, and these will be distinguished as ditransitive. A few verbs, like make in [6], take an object complement and these are among the verbs referred to as complex transitive. The rest are montransitive.

2.8

But distinctions between verbs need to be drawn not only in relation to object- and complement-types but also in relation to whether they themselves admit the aspectual contrast of 'progressive' and 'non-progressive'. Thus it is possible to say

John carefully searched the room [1]

or John was carefully searching the room

It rained steadily all day [4]

or It was raining steadily all day

But it is not possible to use the progressive in

The girl is now a student at a large university

*The girl is now being a student . . .

John knew the answer

*John was knowing the answer

2.9 Categories of adverbial

Next we may take a preliminary look at adverbials, concerning ourselves only with such distinctions as are necessary to explain some of the chief restrictions in constructing the simplest sentences. We may begin by looking again at a sentence with two adverbials:

The girl is now a student at a large university

This might have had fewer elements:

The girl is a student at a large university

The girl is a student

The girl is now a student

The girl is at a large university

but the sentence could not have been formed initially as:

*The girl is now

On this evidence we may say that the adverbials now and at a large university belong to different classes and it seems natural to label them 'time' and 'place' respectively.

Consider now the fact that the adverbial carefully in illustration [1] could be replaced by many others, making acceptable sentences in each case:

John searched the room carefully

John searched the room slowly

John searched the room noisily

John searched the room sternly

John searched the room without delay

But if these same adverbials were inserted in sentences which had stative verbs, the sentences would become unacceptable:

The girl is now a student . . .

The girl is now a student . . .

*The girl is now being a student . . .

John knew the answer . . .

*John was knowing the answer . . .

*carefully

*slowly

*noisily

*sternly

*without delay
It is clear that we again have a subclass of adverbials. Because the verbs with which they can occur allow the progressive, the aspect of on-going activity, it is appropriate to refer to these adverbials as 'process'.

2.10 Types of sentence structure

Bringing together the distinctions so far made, we can present some basic sentence-structure rules diagrammatically. Each line constitutes a pattern which is illustrated by means of a correspondingly numbered example having just those obligatory and optional (parenthesized) elements that are specified in the formula. The order in which the elements appear is common but by no means fixed. It is a principle of sentence organization that what is contextually familiar or 'given' comes relatively early, while the part which needs to be stressed or which seems to convey the greatest information is given the special prominence of 'end-focus'.

```
V stat
\{ intens: \{ \}
\{ C_s \}
\{ ext \%
\{ trans: \{ \}
\{ C_s \}
\} [3]
\} [1]

S
\{ intens: \{ \}
\{ V dyn \}
\{ trans: \{ \}
\{ mono: \{ \}
\{ di: \{ O_s \} \}
\{ complex: \{ O_s C_s \} \}
\} \{ A \} [1]
\{ process \} \{ A \} [1]
\} [2]
\} [3]
```

She is in London (now)
She is a student (in London) (now)
John heard the explosion (from his office) (when he was locking the door)
Universities (gradually) became famous (in Europe) (during the Middle Ages)
They ate the meat (hungrily) (in their hut) (that night)
He offered (him) some chocolates (politely) (outside the lull) (before the concert)
They elected him chairman (without argument) (in Washington) (this morning)
The train had arrived (quietly) (at the station) (before we noticed it)

2.11 Element realization types

Sentence elements can be realized by linguistic structures of very different form. The verb element is always a verb phrase. This may, as in all the examples used so far, be 'finite' (showing tense, mood, aspect, and voice) or 'non-finite' (not showing tense or mood but still capable of indicating aspect and voice). Consider the three types of non-finite verb phrase functioning as the V element in the italicized non-finite clauses:

Mary wanted [to be (V) a student (C_s) at that university (A)] (O_s)
[Carefully (A) searching (V) the room (O_s)] (A), John found a ring
[Made (V) the chairman (C_s) every year (A)] (A), he was very busy

Whether finite or non-finite, the verb phrase can consist of one word, as in most illustrative sentences so far, or of more than one word, in which case the phrase consists of a 'head verb' preceded by one or more 'auxiliary verbs' as with the verb phrases in the following (the first three finite, the fourth non-finite):

He had given the girl an apple
He may be growing happier
He had been challenged rudely, and having been challenged he was angry

The subject of a sentence may be a 'clause' as in

That she answered the question correctly pleased him

but it is usually a 'noun phrase', at its simplest a pronoun such as They or a proper noun such as John. But a noun phrase may be an indeterminately long and complex structure having a noun as head, preceded by other words such as an article, an adjective, or another noun, and followed by a prepositional phrase or by a relative clause; it is by no means uncommon to find all such items present in a noun phrase:

The new gas stove in the kitchen which I bought last month has a very efficient oven

Subject complements, direct objects, and object complements may be realized by the same range of structures as subjects: He was the chairman; She saw the chairman; They made him the chairman. But subject and object complements have the additional possibility of being realized by adjective phrases (having an adjective as head), as in

She made him happy

Indirect objects, on the other hand, have fewer possibilities than subjects, and their realizations are chiefly noun phrases, as in

He had given the girl an apple
Unlike direct objects and subjects, they cannot be realized by that-clauses.

Finally, adverbials can be realized (a) by adverb phrases, having an adverb as head; (b) by noun phrases; (c) by prepositional phrases—that is, structures consisting of a noun phrase dominated by a preposition; and (d) by clauses, finite or non-finite:

(a) John very carefully searched the room
(b) They make him the chairman every year
(c) She studied at a large university
(d) He grew happier when his friend arrived

Seeing the large crowd, John stopped his car.

Parts of speech

2.12
The structures realizing sentence elements are composed of units which can be referred to as parts of speech. These can be exemplified for English as follows:

(a) noun – John, room, answer, play
   adjective – happy, steady, new, large, round
   adverb – steadily, completely, really, very, then
   verb – search, grow, play, be, have, do
(b) article – the, a(n)
   demonstrative – that, this
   pronoun – he, they, anybody, one, which
   preposition – of, at, in, without, in spite of
   conjunction – and, that, when, although
   interjection – oh, ah, ugh, phew

We should notice that the examples are listed as words in their ‘dictionary form’ and not as they often appear in sentences when they function as constituents of phrases: thus the singular room and not the plural rooms, the simple happy and not the comparative happier, the infinitive (or unflexed) grow and not the past grew, the subject form he and not the object form him.

Note
From even the few examples given, it can be seen that a part-of-speech item may consist of more than a single word. This is especially common in the case of complex prepositions (6.4), such as in spite of, out of.

2.13
Some of the examples in 2.12 appear as more than one part of speech (play as noun and verb, that as demonstrative and conjunction) and more of them could have been given additional entries in this way (round, can be noun, verb, adjective, adverb, and preposition). Similarly, we should notice a direct correspondence between most adjectives and adverbs, the latter usually consisting of the former plus -ly. Less obviously, there is an important correspondence between all words beginning /5/ (the, that, then, for example) and many of those beginning wh- (which, when, for example): basically the former are relater or indicator words and the latter interrogative words.

2.14
Closed-system items
The parts of speech in 2.12 are listed in two groups, (a) and (b), and this introduces a distinction of very great significance. Set (b) comprises what are called ‘closed-system’ items. That is, the sets of items are closed in the sense that they cannot normally be extended by the creation of additional members: a moment’s reflection is enough for us to realize how rarely in a language we invent or adopt a new or additional pronoun. It requires no great effort to list all the members in a closed system, and to be reasonably sure that one has in fact made an exhaustive inventory (especially, of course, where the membership is so extremely small as in the case of the article).

The items are said to constitute a system in being (i) reciprocally exclusive: the decision to use one item in a given structure excludes the possibility of using any other (thus one can have the book or a book but not a the book); and (ii) reciprocally defining: it is less easy to state the meaning of any individual item than to define it in relation to the rest of the system. This may be clearer with a non-linguistic analogy. If we are told that a student came third in an examination, the ‘meaning’ that we attach to ‘third’ will depend on knowing how many candidates took the examination: ‘third’ in a set of four has a very different meaning from third in a set of thirty.

2.15
Open-class items
By contrast, set (a) comprises ‘open classes’. Items belong to a class in that they have the same grammatical properties and structural possibilities as other members of the class (that is, as other nouns or verbs or adjectives or adverbs respectively), but the class is ‘open’ in the sense that it is indefinitely extendable. New items are constantly being created and no one could make an inventory of all the nouns in English (for example) and be confident that it was complete. This inevitably affects the way in which we attempt to define any item in an open class: while it would obviously be valuable to relate the meaning of room to other nouns with which it has semantic affinity (chamber, hall, house, . . .) one could not
define it as 'not house, not box, not plate, not indignation, ...', as one might define a closed-system item like this as 'not that'.

Of course, in any one phrase or sentence the decision to select a particular word at one place in the structure obviously imposes great constraints on what can be selected at another. But it is essential to see that in an arrangement like the following there is in principle a sharp difference between the number of possibilities in columns i, iii, and iv ('closed') and the number in ii and v ('open'):

(John) may sit by this fountain
will stare at that tree
must read from window
hurry along blackboard
or path
g.1

The distinction between 'open' and 'closed' parts of speech must be treated cautiously, however. On the one hand, we must not exaggerate the ease with which we create new words: we certainly do not make up new nouns as a necessary part of speaking in the way that making up new sentences is necessary. On the other hand, we must not exaggerate the extent to which parts of speech in set (b) of 2.12 are 'closed': new prepositions (usually of the form 'prep + noun + prep' like by way of) are by no means impossible.

Although they have deceptively specific labels, the parts of speech tend in fact to be rather heterogeneous. The adverb and the verb are perhaps especially mixed classes, each having small and fairly well-defined groups of closed-system items alongside the indefinitely large open-class items. So far as the verb is concerned, the closed-system subgroup is known by the well-established term 'auxiliary'. With the adverb, one may draw the distinction broadly between those in -ly that correspond to adjectives (complete-ly) and those that do not (now, there, forward, very, for example).

2.16 Stative and dynamic

The open classes have some notable general characteristics. We have just seen that adverbs of the productive class are in a one-to-one relation with adjectives. There are regular word-formation processes giving a comparable one-for-one relation between nouns and adjectives, and between nouns and verbs. For the rest, it is useful to see nouns, adjectives, and verbs in connection with the opposition of stative and dynamic introduced in 2.8. Broadly speaking, nouns and adjectives can be characterized naturally as 'stative'; thus, nouns refer to entities that are regarded as stable, whether these are concrete (physical) like house, table, paper, or abstract (of the mind) like hope, botany, length. On the other hand, verbs and adverbs can be equally naturally characterized as 'dynamic': most obviously, verbs, which are fitted (by their capacity to show tense and aspect, for example) to indicate action, activity, and temporary or changing conditions. These relations between the open classes can be summarized thus:

\[
\text{Stative noun} \rightarrow \text{adjective}
\]

\[
\text{Dynamic verb} \rightarrow \text{adverb}
\]

But we saw in 2.8 that there were some verbs such as know which could not normally be used with the progressive ('he is knowing'): that is, which could not be seen as referring to something that was in progress. Verbs so used we called 'stative', and they should be seen as exceptions within the class of verbs. There are exceptions in the other direction among the nouns, not all of which need be stative. For example, a child may be well-behaved one minute and a nuisance the next. The situation is similar when we turn to the remaining open word-class, adjectives. Although they are predominantly stative (tall, red, old), some adjectives can resemble verbs in referring on occasion to transitory conditions of behaviour or activity such as naughty or insolent. And since be must be used to make predications having any noun or adjective as complement, we must qualify the statement made in 2.8 that this is a stative verb: it can also be used dynamically, in the progressive, when the complement is dynamic:

He is being \{a nuisance\} again

Indeed, it is essential to realize that these primary distinctions are in the nature of general characteristics rather than immutable truths. No small part of language's value lies in its flexibility. Thus we can take a normally dynamic item (say the verb in 'He wrote the book') and 'nominalize' it ('The writing of the book'), pretending – as it were – to see the action as a static 'thing'. So also the verb tax beside the noun taxation. Again, the name 'participle' reflects the fact that such a form participates in the features both of the verb ('The girl is sitting there') and of the adjective ('The sitting girl').
2.17 Pro-forms
The names of the parts of speech are traditional, however, and neither in themselves nor in relation to each other do these names give a safe guide to their meaning, which instead is best understood in terms of their grammatical properties. ‘Adverb’ is a classic instance. We have seen some justification in the previous section for ‘participle’, and of course the ‘pronoun’ is an even clearer exception in correctly suggesting that it can serve as a replacement for a noun:

John searched the big room and the small one

More usually, however, pronouns replace noun phrases rather than nouns:

The man invited the little Swedish girl because he liked her

There are pro-forms also for place, time, and other adverbials under certain circumstances:

Mary is in London and John is there too
Mary arrived on Tuesday and John arrived then too
John searched the big room very carefully and the small one less so

But so has a more important pro-function, namely, to replace – along with the ‘pro-verb’ do – a predication (cf. 2.3):

She hoped that he would search the room carefully before her arrival but he didn’t do so

Here do so replaces all the italicized portion, the head verb search and the rest of the predication, as is shown below:

Frequently, however, the pro-predication is achieved by the operator alone:

2.19 Yes-no questions
A: He didn’t give her an apple.  B: Yes, he did.
They suspected that he had given her an apple and he had

Finally, it may be briefly observed that the use of the pro-forms greatly facilitates sentence connection as in [7], the conjoining of sentences to form ‘compound sentences’ as in [3] or [8], and the subordination of one sentence within another to form ‘complex sentences’ as in [2].

2.18 Wh-questions
The pro-forms we have been considering may be regarded as having the general meaning ‘We know what this item refers to, so I need not state it in full’. In 2.13 attention was drawn to correspondences of the then-when type, and we may now consider the wh-words of English as a special set of pro-forms diametrically opposed to the others in having the general meaning ‘It has not been known what this item refers to and so it needs to be stated in full’. This informal statement will account for the use of wh-forms in questions:

Mary is in London
Mary is there
Where is Mary?

By such means, we can ask for the identification of the subject, object, complement or an adverbial of a sentence:

They (i) make him (ii) the chairman (iii) every year (iv)
Who makes him the chairman every year?
Whom do they make the chairman every year?
What do they make him every year?
When do they make him the chairman?

It will be noticed that in each case the wh-form is placed in first position and that unless this is questioning the subject, as in [i], when the verb follows in its normal second position (2.5), the wh-form is followed by the operator (2.3) which in turn is followed by the subject and predication.

Note
The wh-forms include not only which, when, why, where, etc but also, less obviously, a few items pronounced with initial /h/, some having wh- in spelling (who, whose, whom), and one not (how).

2.19 Yes-no questions
Besides wh-questions, which elicit information on particular parts of a
sentence, there are questions which seek a *yes* or *no* response in relation to the validity of (normally) an entire predication:

- Is the girl now a student?
- Did John search the room?
- Had he given the girl an apple?

Such questions normally open with an operator which is then followed by the subject and the predication (2.3).

### 2.20 Negation and non-assertion

While a *yes-no* question normally challenges the validity of a predication as a whole, negation rejects it. And like *yes-no* questions, negative sentences involve the operator, requiring the insertion of *not* (or the affixal contraction *n*’) between the operator and the predication:

- The girl isn’t a student
- John did not search the room
- He hadn’t given the girl an apple

We need to see a further similarity between questions and negations. Let us call a sentence such as

- He offered her *some* chocolates

an *assertion*. Now, a sentence can be *non-assertive* in one of two ways: by being negative or by being a question. We do not therefore have two independent systems

- *positive*: negative
- *declarative*: interrogative

but rather an interrelated system in which *assertion* involves both ‘positive’ and ‘declarative’ while *non-assertion* has a subsystem either ‘negative’ or ‘interrogative’. The relationship may be diagrammed thus:

```
assertion   non-assertion
    \           \       
     positive    negative
      \        \      
     interrogative
```

While it is right to show ‘interrogative’ as lying between the upper extreme ‘positive and declarative’ and the lower extreme ‘negative’, it is important to recognize that ‘interrogative’ has a closer relationship to ‘negative’ in springing like it from the ‘non-assertion’ node. Evidence for this is not difficult to find. As compared with the *some* of the positive-declarative [1], we find *any* in the corresponding question and negation:

- Did he offer her *any* chocolates?
- He didn’t offer her *any* chocolates

**Bibliographical note**

On parts of speech, see Lyons (1968), Ch 4; on stativeness, see Schopf (1969), Ch 3. Guidance on further reading is otherwise reserved for those chapters where specific topics here sketched are discussed in more detail. For general bibliography, see Scheurweghs (1963–68).
THREE

VERBS AND THE VERB PHRASE

3.1
Types of verb

There are various ways in which it will be necessary to classify verbs in this chapter. We begin with a classification relating to the function of items in the verb phrase. This distinguishes lexical verbs from the closed system (2.14) of auxiliary verbs, and subdivides the latter into primary and modal auxiliaries.

LEXICAL

walk, write, play, beautify, etc.

AUXILIARY

Primary: do, have, be

 Modal: can, may, shall, will,
could, might, should, would,
must, ought to, used to, need, dare

Note

As we shall see (3.22), some of the modals listed differ in their inflectional and syntactic behaviour from others and will be referred to as 'marginal'. On the other hand, further items like 

 had better or tend to could be added to the list since they have a similar semantic relation in the verb phrase to the modals; these other expressions are often called 'semi-auxiliaries'.

3.2
Verbal forms and the verb phrase

Many English verbs have five forms: the base, the -s form, the past, the -ing participle, and the -ed participle. Examples of these forms and an indication of their functions are given in the table below. Regular lexical verbs have the same -ed inflection for both the past tense and the -ed participle (called, see 3.4). Irregular lexical verb forms vary from three (eg: put, puts, putting, see 3.10 ff) to eight (be, am, is, are, was, were, being, been, see 3.70). The modal auxiliaries are defective in not having infinitive (*to may), -ing participle (*maying), -ed participle (*mayed), or imperative (*may!). See further 3.21.
The morphology of lexical verbs

3.3
We will consider lexical verbs under two heads: regular (such as call) and irregular (such as drink). In all of them, the -s form and -ing participle are predictable from the base form. They differ in that the -ed, and -ed form in irregular verbs cannot be predicted from the base.

Regular lexical verbs

3.4
Regular lexical verbs have the following forms:

<table>
<thead>
<tr>
<th>V BASE</th>
<th>-ing -ING PARTICIPLE</th>
<th>-s -S FORM</th>
<th>-ed /-ED PARTICIPLE</th>
</tr>
</thead>
<tbody>
<tr>
<td>call</td>
<td>calling</td>
<td>likes</td>
<td>called</td>
</tr>
<tr>
<td>like</td>
<td>liking</td>
<td>tries</td>
<td>liked</td>
</tr>
<tr>
<td>try</td>
<td>trying</td>
<td></td>
<td>tried</td>
</tr>
</tbody>
</table>

These are regular in that we can predict the other forms if we know the base of such a verb. This is a very powerful rule, since the base is the form listed in dictionaries and the vast majority of English verbs belong to this regular class. Furthermore, all new verbs that are coined or borrowed from other languages adopt this pattern.

3.5
The -ing and -s forms

The -ing form is a straightforward addition to the base:

push ~ pushing

Sleep ~ sleeping

Syllabic /l/ ceases to be syllabic before the inflection (as in wriggle, wriggling), and whether or not speakers pronounce final r (as in pour), the r is pronounced before the inflection.

The -s form is also predictable from the base. It has three spoken realizations: /iz/, /z/, and /s/, and two spellings, -s and -es.

1. Pronounced /iz/ after bases ending in voiced or voiceless sibilants and spelled -es unless the base already ends in -e, eg

   pass ~ passes
   buzz ~ buzzes
   rattle ~ catches

2. Pronounced /z/ and spelled -s after bases ending in other voiced sounds, eg

   call ~ calls
   rob ~ robs
   flow ~ flows

Note: do ~ does

say ~ says

3.7 Further inflectional spelling rules

(3) Pronounced /s/ and spelled -s after bases ending in other voiceless sounds, eg

   cut ~ cuts
   lock ~ locks
   sap ~ saps

3.6
The past and the -ed participle

The past (V-ed) and the -ed participle (V-ed) of regular verbs (spelled -ed unless the base ends in -e) have three spoken realizations:

<table>
<thead>
<tr>
<th>/p/</th>
<th>/t/</th>
</tr>
</thead>
<tbody>
<tr>
<td>/pad/ after bases ending in /d/ and /t/, eg</td>
<td>/pad/ after bases ending in voiceless sounds other than /d/, eg</td>
</tr>
<tr>
<td>/pat/ patted</td>
<td>/mow/ mowed</td>
</tr>
<tr>
<td>/bud/ budged</td>
<td>/pack/ packed</td>
</tr>
</tbody>
</table>

Further inflectional spelling rules

3.7
Doubling of consonant

Final base consonants (except x) are doubled before inflections beginning with a vowel letter when the preceding vowel is stressed and spelled with a single letter:

bar ~ barring ~ barred
permit ~ permitting ~ permitted

There is no doubling when the vowel is unstressed or written with two letters:

enter ~ entering ~ entered
dread ~ dreading ~ dreaded

Exceptions:

(a) Bases ending in certain consonants are doubled also after single unstressed vowels: -g ~ -gg, -c ~ -ck, -:

   humbug ~ humbugging ~ humbugged
   traffic ~ trafficking ~ trafficked

(b) BrE, as distinct from AmE, breaks the rule with respect to certain other consonants also: -l ~ -ll, -m ~ -mm, -p ~ -pp, -:

   signal ~ signalling ~ signalled (BrE)
   signal ~ signalling ~ signaled (AmE)
   travel ~ travelling ~ travelled (BrE)
   travel ~ travelling ~ traveled (AmE)
3.8 Treatment of -y
(a) In bases ending in a consonant + y, the following changes occur before inflections that do not begin with i:

- **carry~carries**
- **carry~carried**
- **but carry~carrying**

The past of the following two verbs has a change y → i also after a vowel:

- **lay~laid**
- **pay~paid**

**Say~said** has the same change of spelling but, in addition, a change of vowel; see also 3.5.

(b) In bases ending in -ie, the i is replaced by y before the -ing inflection:

- **die~dying**
- **lie~lying**

3.9 Deletion of -e
Final -e is regularly dropped before the -ing and -ed inflections:

- **shave**
- **shaving**
- **shaved**

Verbs with bases in -ee, -ye, -oe, and often -ge are exceptions to this rule in that they do not drop the -e before -ing; but they do drop it before -ed, as do also forms in -ie (tie ~ tied):

- **-ee:** agree agreeing agreed
- **-ye:** dye dyeing dyed
- **-oe:** hoe hoeing hoed
- **-ge:** sing singe singing singed

3.10 Irregular lexical verbs

Irregular lexical verbs differ from regular verbs in the following ways:

(a) Irregular verbs either do not have a /d/ or /t/ inflection (drink ~ drank ~ drunk) or break the rule in 3.6 for a voiced inflection (eg: burn ~ burnt /t/, beside the regular burned /d/).
### 3.12

**Class 2: V-\(ed_1\) is identical with V-\(ed_2\)**

Suffixation is used but voicing is variable

<table>
<thead>
<tr>
<th>V</th>
<th>V-(ed)</th>
<th>V</th>
<th>V-(ed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2a</td>
<td>bereave</td>
<td>bereft (R)</td>
<td>2b</td>
</tr>
<tr>
<td></td>
<td>cleave</td>
<td>cleft</td>
<td></td>
</tr>
<tr>
<td></td>
<td>creep</td>
<td>crept</td>
<td></td>
</tr>
<tr>
<td></td>
<td>deal</td>
<td>dealt</td>
<td></td>
</tr>
<tr>
<td></td>
<td>dream</td>
<td>dreamt (R)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>feel</td>
<td>felt</td>
<td></td>
</tr>
<tr>
<td></td>
<td>flee</td>
<td>fled</td>
<td></td>
</tr>
<tr>
<td>2c</td>
<td>keep</td>
<td>keep</td>
<td>2c</td>
</tr>
<tr>
<td></td>
<td>kneel</td>
<td>knelt (R)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>lean</td>
<td>leant (R)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>leap</td>
<td>leapt (R)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>leave</td>
<td>left</td>
<td></td>
</tr>
<tr>
<td></td>
<td>mean</td>
<td>meant</td>
<td></td>
</tr>
<tr>
<td>sleep</td>
<td>slept</td>
<td>sweep</td>
<td>swept</td>
</tr>
</tbody>
</table>

**Note**

Where there are regular variants, these are usually preferred in AmE.

### 3.13

**Class 3:** All three parts V, V-\(ed_1\), and V-\(ed_2\) are identical

No suffix or change of the base vowel

<table>
<thead>
<tr>
<th>V and V-(ed)</th>
<th>V and V-(ed)</th>
<th>V and V-(ed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>bet (R)</td>
<td>knit (R)</td>
<td>shut</td>
</tr>
<tr>
<td>bid 'make a bid' (R)</td>
<td>let</td>
<td>slit</td>
</tr>
<tr>
<td>burst</td>
<td>put</td>
<td>split</td>
</tr>
<tr>
<td>cast</td>
<td>quit (R)</td>
<td>spread</td>
</tr>
<tr>
<td>cost</td>
<td>rid (R)</td>
<td>sweat (R)</td>
</tr>
<tr>
<td>cut</td>
<td>set</td>
<td>thrust</td>
</tr>
<tr>
<td>hit</td>
<td>shed</td>
<td>wed (R)</td>
</tr>
<tr>
<td>hurt</td>
<td>shit</td>
<td>wet (R)</td>
</tr>
</tbody>
</table>

**Note**

The transitive cost 'estimate the cost of' and shed 'put in a shed' are R.

### 3.14

**Class 4: V-\(ed_1\) is identical with V-\(ed_2\)**

No suffixation

Change of base vowel

<table>
<thead>
<tr>
<th>V</th>
<th>V-(ed)</th>
<th>V</th>
<th>V-(ed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4a</td>
<td>bleed</td>
<td>bled</td>
<td>4c</td>
</tr>
<tr>
<td></td>
<td>breed</td>
<td>bred</td>

</tr>
</tbody>
</table>

**Note**

[a] When hang means 'execute', it is usually R.

[b] The metaphorical strike is in Class 6c.

[c] AmE gotten is used in the sense 'acquired', 'caused', 'come'.

[d] The transitive shine 'polish' can be R, esp in AmE.

### 3.15

**Class 5: V-\(ed_1\) is regular; V-\(ed_2\) has two forms, one regular, the other nasal.**

<table>
<thead>
<tr>
<th>V</th>
<th>V-(ed_1)</th>

#### Note

*She has borne six children and the youngest was born a month ago.*

### 3.16

**Class 6:** V-d₁ and V-d₂ are irregular, the latter always suffixed and usually with -(e)n. There are subclasses as follows:

- **A:** V-d₁ and V-d₂ have the same vowel
- **B:** V and V-d₂ have the same vowel
- **C:** all three parts have different vowels
- **D:** all three parts have the same vowel
- **E:** V-d₁ and V-d₂ have different vowels

<table>

</tbody>
</table>

#### Note

In the static sense (3.15) of possession, have is often (especially in BrE) constructed as an auxiliary. AmE prefers the *de-* construction:

1. *I haven't* any books
Verbs and the verb phrase 3.20

In dynamic senses (receive, take, experience, etc), lexical have in both AmE and BrE normally has the do-construction:

*Does he have coffee with his breakfast?*
*Did you have any difficulty getting here?*

The do-construction is required in such expressions as

*Did you have a good time?*

There is also the informal have got, where have is constructed as an auxiliary, which is frequently preferred (especially in BrE) as an alternative to have. It is particularly common in negative and interrogative sentences. As a further alternative for expressing negation, we have the negative determiner no:

I haven’t got any books  I have no books

3.20

**Be**

The lexical and auxiliary verb be is unique among English verbs in having eight different forms:

<table>
<thead>
<tr>
<th>Base</th>
<th>Uncontracted Negative</th>
<th>Contracted Negative</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Present</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1st person singular</td>
<td>am, ’m</td>
<td>am not, ’m not</td>
</tr>
<tr>
<td>3rd person singular</td>
<td>is, ’s</td>
<td>is not, ’s not</td>
</tr>
<tr>
<td>2nd person, 1st and 3rd person plural</td>
<td>are, ’re</td>
<td>are not, ’re not</td>
</tr>
<tr>
<td><strong>Past</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1st and 3rd person singular</td>
<td>was</td>
<td>was not</td>
</tr>
<tr>
<td>2nd person, 1st and 3rd person plural</td>
<td>were</td>
<td>were not</td>
</tr>
</tbody>
</table>

3.22 Marginal modal auxiliaries

[6] The lexical verb be may have the do-construction in persuasive imperative sentences and regularly has it with negative imperatives:

Do be quiet! Don’t be silly!

### The modal auxiliaries 3.21

The modal auxiliaries are the following:

<table>
<thead>
<tr>
<th>Non-Negative</th>
<th>Uncontracted Negative</th>
<th>Contracted Negative</th>
</tr>
</thead>
<tbody>
<tr>
<td>can</td>
<td>cannot, can not</td>
<td>can’t</td>
</tr>
<tr>
<td>could</td>
<td>could not</td>
<td>couldn’t</td>
</tr>
<tr>
<td>may</td>
<td>may not</td>
<td>mayn’t</td>
</tr>
<tr>
<td>might</td>
<td>might not</td>
<td>mightn’t</td>
</tr>
<tr>
<td>shall</td>
<td>shall not</td>
<td>shouldn’t</td>
</tr>
<tr>
<td>should</td>
<td>should not</td>
<td>shouldn’t</td>
</tr>
<tr>
<td>will, ’ll</td>
<td>will not, ’ll not</td>
<td>wouldn’t</td>
</tr>
<tr>
<td>would, ’d</td>
<td>would not, ’d not</td>
<td>wouldn’t</td>
</tr>
<tr>
<td>must</td>
<td>must not</td>
<td>mustn’t</td>
</tr>
<tr>
<td>ought to</td>
<td>ought not to</td>
<td>oughtn’t to</td>
</tr>
<tr>
<td>used to</td>
<td>used not to</td>
<td>usedn’t to</td>
</tr>
<tr>
<td>need</td>
<td>need not</td>
<td>needn’t</td>
</tr>
<tr>
<td>dare</td>
<td>dare not</td>
<td>daren’t</td>
</tr>
</tbody>
</table>

**Note**

[a] Mayn’t is restricted to BrE, where it is rare.

[b] Shall’s is rare in AmE.

[c] Ought regularly has the to-infinite, but AmE occasionally has the bare infinitive in negative sentences and in questions (although should is commoner in both cases):

You oughtn’t smoke so much; Ought you smoke so much?

3.22 Marginal modal auxiliaries

*Used* always takes the to-infinite and occurs only in the past tense. It may take the do-construction, in which case the spellings *didn’t used to* and *didn’t use to* both occur. The interrogative construction used he to is especially BrE; *did he use to* is preferred in both AmE and BrE.

**Dare** and **need** can be constructed either as modal auxiliaries (with bare infinitive and with no inflected -s form) or as lexical verbs (with to-infinite and with inflected -s form). The modal verb construction is restricted to non-assertive contexts (see 2.20), ie mainly negative and interrogative sentences, whereas the lexical verb construction can always be used and is in fact the more common. **Dare** and **need** as auxiliaries are probably rarer in AmE than in BrE.
<table>
<thead>
<tr>
<th>MODAL AUXILIARY CONSTRUCTION</th>
<th>LEXICAL VERB CONSTRUCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>He needs to go now</td>
<td>He needs to go now</td>
</tr>
<tr>
<td>He doesn’t need to go now</td>
<td>He doesn’t need to go now</td>
</tr>
<tr>
<td>Need he go now?</td>
<td>Does he need to go now?</td>
</tr>
<tr>
<td>Needn’t he go now?</td>
<td>Doesn’t he need to go now</td>
</tr>
</tbody>
</table>

**Notes**

(a) Non-assertive forms are not confined to overtly negative and/or interrogative sentences but can also be present in adverbials, e.g.: *He needs it only under these circumstances*, *He need it but once*; in determiners, e.g.: *He need have no fear*, *No soldier dare disobey*; in pronouns, e.g.: *No one dare predict* . . . ; or even implicitly, e.g.: *All you need do is* , . . . (*You need do no more than . . .).*

(b) Note that the two constructions are both acceptable in the case of *dare*: *We do not dare speak.*

### Finite and non-finite verb phrases

**3.23**

The verb forms operate in finite and non-finite verb phrases, which are distinguished as follows:

1. **Finite verb phrases** have tense distinction (see 3.26 ff):
   - He *studies* English
   - He *studied* English

2. Finite verb phrases occur as the verb element of a clause. There is person and number concord between the subject and the finite verb (cf. 7.18 and 7.26). Concord is particularly overt with *be* (cf. 3.20):
   - I *am* You/we/they *are* He/she/it *is*

   With most lexical verbs, concord is restricted to a contrast between 3rd and non-3rd person singular present:
   - He *reads* the paper every morning
   - They *read* the paper every morning

   With the modal auxiliaries there is, however, no concord:
   - I *can* you/we/they *can* play the cello

3. Finite verb phrases have mood (3.45). In contrast to the ‘unmarked’ indicative mood, we distinguish the ‘marked’ moods imperative (see 7.58 ff), and subjunctive (see 3.46).

### 3.25 Contrasts expressed in the verb phrase

In addition to the contrasts of tense, aspect, and mood (which are dealt with in the present chapter, 3.26–55), it may be convenient to list here the other major constructions which affect the verb phrase or in which verb-phrase contrasts play an important part.

(4) The non-finite forms of the verb are the infinitive (*to call*), the -ing participle (*calling*), and the -ed participle (*called*). Non-finite verb phrases consist of one or more such items. Compare:

<table>
<thead>
<tr>
<th>FINITE VERB PHRASES</th>
<th>NON-FINITE VERB PHRASES</th>
</tr>
</thead>
<tbody>
<tr>
<td>He smokes heavily</td>
<td>To smoke like that must be dangerous</td>
</tr>
<tr>
<td>He is working</td>
<td>I found him working</td>
</tr>
<tr>
<td>He had been offended before</td>
<td>Having been offended before, he was sensitive</td>
</tr>
</tbody>
</table>

### 3.24

The modal, perfective, progressive and passive auxiliaries follow a strict order in the complex verb phrase:

- **[I]** modal, always followed by an infinitive, as in
  - He would visit
- **[II]** perfective, always followed by an - *ed* form, as in
  - He had visited
  - He would have visited
- **[III]** progressive, always followed by an - *ing* form, as in
  - He was visiting
  - He would have been visiting
- **[IV]** passive, always followed by an - *ed* form, as in
  - He was visited
  - He would have been visited

The last example is added for completeness but the full range of auxiliaries is rarely found simultaneously in this way (though less rarely with the get passive: 7.5). Rather, it should be noted that, while the above order is strictly followed, gaps are perfectly normal. For example:

- **I + III:** He may be visiting
- **II + IV:** He has been visited
(a) **Voice**, involving the active-passive relation, as in

A doctor will examine the applicants

> The applicants will be examined by a doctor

will be discussed in 7.5 and 12.14-32.

(b) **Questions** requiring subject movement involve the use of an auxiliary as operator:

John will sing ~ Will John sing?

John sang ~ Did John sing?

This topic is dealt with in 7.44-57.

(c) **Negation** makes analogous use of operators, as in

John will sing ~ John won't sing

John sang ~ John didn't sing

and will be handled in 7.33-42.

(d) **Emphasis**, which is frequently carried by the operator as in

John will sing!

John did sing!

is treated in 14.35.

(e) **Imperatives**, as in Go home, John; You go home, John; Don't (you) go yet; Let's go home, are discussed in 7.58-62.

### Tense, aspect, and mood

3.26

Time is a universal, non-linguistic concept with three divisions: past, present, and future; by **tense** we understand the correspondence between the form of the verb and our concept of time. **Aspect** concerns the manner in which the verbal action is experienced or regarded (for example as completed or in progress), while **mood** relates the verbal action to such conditions as certainty, obligation, necessity, possibility. In fact, however, to a great extent these three categories impinge on each other: in particular, the expression of time present and past cannot be considered separately from aspect, and the expression of the future is closely bound up with mood.

### Tense and aspect

3.27

We here consider the **present** and **past** tenses in relation to the **progressive** and **perfective** aspects. The range can be seen in the sentence frame

3.28 Present

'I ----- with a special pen', filling the blank with a phrase having the verb base **write**:

<table>
<thead>
<tr>
<th>Tense</th>
<th>Complex</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simple</td>
<td>Progressive</td>
</tr>
<tr>
<td>Present</td>
<td>Write</td>
</tr>
<tr>
<td>Was writing</td>
<td>Present</td>
</tr>
<tr>
<td>Perfective</td>
<td>Perfect</td>
</tr>
<tr>
<td>Past</td>
<td>Wrote</td>
</tr>
<tr>
<td>Have written</td>
<td>(Present) perfect</td>
</tr>
<tr>
<td>Perfect progressive</td>
<td>Perfect</td>
</tr>
<tr>
<td>Have been writing</td>
<td>(Present) perfect</td>
</tr>
<tr>
<td>Had been writing</td>
<td>Past (or plu.) perfect</td>
</tr>
</tbody>
</table>

3.28 Present

We need to distinguish three basic types of present:

(a) **Tense**, expressed with the simple present form:

I (always) write with a special pen when I sign my name.

As well as expressing habitual action as here, the timeless present is used for universal statements such as

The sun sets in the west.

Spiders have eight legs.

(b) **Limited**, expressed with the present progressive:

I am writing (on this occasion) with a special pen (since I have mislaid my ordinary one).

Normally he lives in London but at present he is living in Boston.

In indicating that the action is viewed as in process and of limited duration, the progressive can express incompleteness even with a verb like *stop* whose action cannot in reality have duration; thus *the bus is stopping* means that it is slowing down but has not yet stopped. The progressive (usually with an adverb of high frequency) can also be used of habitual action, conveying an emotional colouring such as irritation:

He's always writing with a special pen — just because he likes to be different.

(c) **Instantaneous**, expressed with either the simple (especially in a series) or the progressive form:
Watch carefully now: first, I write with my ordinary pen; now, I write with a special pen. As you see, I am dropping the stone into the water.

The simple present is, however, usual in radio commentary on sport ('Moore passes to Charlton'), and in certain performative declarations ('I name this ship Snaefell') it is obligatory.

Note
The verbs keep (on), go on have a similar function to the normal progressive auxiliary be:

John keeps (keeps) (goes on) asking silly questions

Past
3.29
An action in the past may be seen
(1) as having taken place at a particular point of time; or
(2) over a period; if the latter, the period may be seen as
(a) extending up to the present, or
(b) relating only to the past; if the latter, it may be viewed as
(i) having been completed, or as
(ii) not having been completed

<table>
<thead>
<tr>
<th>Past</th>
<th>Present</th>
<th>Future</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(1)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(2a)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(2b)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(2bii)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Typical examples will be seen to involve the perfective and progressive aspects as well as the simple past:

(1) I wrote my letter of 16 June 1972 with a special pen
(2a) I have written with a special pen since 1972
(2b) I wrote with a special pen from 1969 to 1972
(2bii) I was writing poetry with a special pen

Habitual activity can also be expressed with the simple past ('He always wrote with a special pen'), but since - unlike the simple present - this is not implied without a suitable adverb, use to or (less commonly) would may be needed to bring out this sense:

He used to write with a special pen

Note
Past time can be expressed with present tense forms. The 'historic present' is fairly common in vivid narrative:

At that moment, in comes a policeman
but has no such journalistic overtones with verbs of communicating:

John tells me that there was a car accident last night

On the other hand, past tense forms need not refer to past time. 'Did you want to see me?' is little more than a slightly richer version of 'Do you ...?' For the 'modal past', see 3.47 and 11.48; for the past by 'back-shift' in indirect speech, see 11.53.

3.30 The past and the perfective
In relation to (2a), it is not the time specified in the sentence but the period relevant to the time specified that must extend to the present.

Contrast
John lived in Paris for ten years

(which entails that the period of residence has come to an end and which admits the possibility that John is dead) with

John has lived in Paris for ten years

which entails that John is still alive but permits the residence in Paris to extend either to the present (the usual interpretation) or to some unspecified date in the past. Compare also:

For generations, Nepal has produced brilliant mountaineers

For generations, Sparta produced (was producing) fearless warriors

The first claims that Nepal is still in a position to produce more mountaineers, even if a long time may have elapsed since the last was produced. The second sentence, on the other hand, is uncommitted as to whether any further warriors can be produced by Sparta.

The choice of perfective aspect is associated with time-orientation and consequently also with various time-indicators (lately, since, so far, etc). It is therefore helpful to consider these two together. Here are some examples:
3.31 Indefinite and definite
Through its ability to involve a span of time from earliest memory to the present, the perfective has an indefiniteness which makes it an appropriate verbal expression for introducing a topic of discourse. As the topic is narrowed down, the emerging definiteness is marked by the simple past as well as in the noun phrases (cf. 4.25). For example:

He says that he has seen a meteor at some time (between earliest memory and the present)
as compared with
He says that he saw the meteor last night that everyone is so excited about

Compare also:
Did you know that John has painted a portrait of Mary?
Did you know that John painted this portrait of Mary?

3.32 Past perfect
What was said of the perfect in 3.29r—applies to the past perfect, with the complication that the point of current relevance to which the past perfect extends is a point in the past:

3.33 The past and the progressive

<table>
<thead>
<tr>
<th>Past</th>
<th>Present</th>
<th>Future</th>
</tr>
</thead>
<tbody>
<tr>
<td>relevant point</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Thus:
(I say now [present] that) When I met him [relevant point in the past] John had lived in Paris for ten years

In some contexts, the simple past and the past perfect are interchangeable; eg:

I ate my lunch after my wife {came (had come)} home from her shopping

Here the conjunction after is sufficient specification to indicate that the arrival from the shopping expedition had taken place before the eating, so that the extra time indication by means of the past perfect becomes redundant.

Note
There is no interchangeability when the past perfect is the past of the perfect:
John told me that he had seen Mary since Monday
John told me that he didn’t see Mary since Monday
*John told me that he didn’t see Mary since Monday
Habitual activity may be expressed by the progressive provided it is clear that the habit is temporary:

At that time, we were bathing every day
and not merely sporadic:

*We were sometimes walking to the office
But general habits may be pejoratively referred to (cf 3.28):

My brother was always losing his keys

3.34
The perfect progressive
Limited duration (or incompleteness) and current relevance can be jointly expressed with the perfect progressive. Compare:

He has eaten my chocolates (they are all gone)
He was eating my chocolates (but I stopped him)
He has been eating my chocolates (but there are some left)
Frequently the perfect progressive implies an especially recent activity, the effects of which are obvious, and the adverb just commonly accompanies this usage:

It has rained a great deal since you were here
Oh look! It has just been raining

3.35
Verbal meaning and the progressive
As pointed out in 2.8, the progressive occurs only with dynamic verbs (or more accurately, with verbs in dynamic use). These verbs [A] fall into five classes while the stative verbs [B], which disallow the progressive, can be seen as belonging to one of two classes.

[A] DYNAMIC
(1) Activity verbs: abandon, ask, beg, call, drink, eat, help, learn, listen, look at, play, rain, read, say, slice, throw, whisper, work, write, etc.
(2) Process verbs: change, deteriorate, grow, mature, slow down, widen, etc. Both activity and process verbs are frequently used in progressive aspect to indicate incomplete events in progress.
(3) Verbs of bodily sensation (ache, feel, hurt, itch, etc) can have either simple or progressive aspect with little difference in meaning.
(4) Transitional event verbs (arrive, die, fall, land, leave, lose, etc) occur in the progressive but with a change of meaning compared with simple aspect. The progressive implies inception, i.e. only the approach to the transition.
(5) Momentary verbs (bit, jump, kick, knock, nod, tap, etc) have little duration, and thus the progressive aspect powerfully suggests repetition.

[B] STATIVE
(1) Verbs of inert perception and cognition: abhor, adore, astonish, believe, desire, detest, dislike, doubt, feel, forgive, guess, hate, hear, imagine, impress, intend, know, like, love, mean, mind, perceive, please, prefer, presuppose, realize, recall, recognize, regard, remember, satisfy, see, smell, suppose, taste, think, understand, want, wish, etc. Some of these verbs may take other than a recipient subject (7.11) in which case they belong with the A1 class. Compare:

I think you are right [B1]
I am thinking of you all the time [A1]

(2) Relational verbs: apply to (everyone), be, belong to, concern, consist of, contain, cost, depend on, deserve, equal, fit, have, include, involve, lack, matter, need, owe, own, possess, remain (a bachelor), require, resemble, seem, sound, suffice, tend, etc.

The future
3.36
There is no obvious future tense in English corresponding to the time/tense relation for present and past. Instead there are several possibilities for denoting future time. Futurity, modality, and aspect are closely related, and future tense is rendered by means of modal auxiliaries or semi-auxiliaries, or by simple present forms or progressive forms.

3.37
Will and shall
will or 'll+infinitive in all persons
shall+infinitive (in 1st person only; chiefly BrE)

I will/shall arrive tomorrow
He'll be here in half an hour

The future and modal functions of these auxiliaries can hardly be separated (cf 3.50f), but shall and, particularly, will are the closest approximation to a colourless, neutral future. Will for future can be used in all persons throughout the English-speaking world, whereas shall (for 1st person) is largely restricted in this usage to southern BrE.
The auxiliary construction is also used to refer to a statement seen in the past from a point of orientation in the future:

They will have finished their book by next year

Note
Other modal auxiliaries can have future reference also: 'He may leave tomorrow' = 'He will possibly leave ...'

3.38
Be going to + infinitive
This construction denotes 'future fulfillment of the present'. Looked at more carefully, be going to has two more specific meanings, of which one, 'future of present intention', is used chiefly with personal subjects:

When are you going to get married?
The other meaning is 'future of present cause', which is found with both personal and non-personal subjects:

She's going to have a baby
It's going to rain

Both of these suggest that the event is already 'on the way'. Be going to is not generally used in the main clause of conditional sentences, will'll or shall being preferred instead:

If you leave now, you'll never regret it

3.39
Present progressive
The present progressive refers to a future happening anticipated in the present. Its basic meaning is 'fixed arrangement, plan, or programme':

He's moving to London

Since the progressive is used to denote present as well as future, a time adverbial is often used to clarify in which meaning the verb is being used:

They are washing the dishes {now later}.

The present progressive is especially frequent with dynamic transitional verbs like arrive, come, go, land, start, stop, etc, which refer to a transition between two states or positions:

The plane is taking off at 5.00
The President is coming to the UN this week

3.41 Will/shall + progressive

The auxiliary verb construction (3.37) can be used together with the progressive infinitive to denote a 'future-as-a-matter-of-course': will/shall + be + V-ing. The use of this combination avoids the interpretation (to which will, shall, and be going to are liable) of volition, insistence, etc:

He'll do his best (future or volitional interpretation possible)
He'll be doing his best (future interpretation only)

This complex construction can be used to convey greater tact and consideration than the simple auxiliary construction does:

When will you {put on} another performance?

When will you {be coming}?
3.42

**Be to + infinitive**

This expresses (a) arrangement, (b) command, or (c) contingent future:

(a) *We are to be married soon*

   *There's to be an investigation*

(b) *You are to be back by 10 o'clock*

(c) *If he is to succeed, he must work harder*

3.43

**Be about to + infinitive**

This construction expresses near future, i.e., imminent fulfilment:

The taxi is here and we are about to leave.

*Be... to may enclose other items such as shortly or soon to provide a means of future expression; with other items again (bound, liable, certain, (un)likely), future expression is overlaid with modal meaning:*

   *He is certain to address the meeting (= It is certain that he will address...)*

3.44

**Future time in the past**

Some of the future constructions just discussed can be used in the past tense to express time which is in the future when seen from a viewpoint in the past.

1. **Auxiliary verb construction** with *would* (rare; literary narrative style)

   *The time was not far off when he would regret this decision*

2. **be going to + infinitive** (often with the sense of 'unfulfilled intention')

   *You were going to give me your address*

3. **Past progressive**

   *I was meeting him in Bordeaux the next day*

4. **be to + infinitive** (formal = 'was destined', 'was arranged')

   *He was later to regret his decision*

   *The meeting was to be held the following week*

5. **be about to** ('on the point of'); cf 3.43

   *He was about to hit me*

3.45

Mood

Mood is expressed in English to a very minor extent by the subjunctive, as in:

*So be it then!*

*to a much greater extent by past tense forms, as in:*

*If you taught me, I would learn quickly*

*but above all, by means of the modal auxiliaries, as in:*

*It is strange that he should have left so early*

3.46

**The subjunctive**

Three categories of subjunctive may be distinguished:

(a) The **Mandatory Subjunctive** in *that*-clauses has only one form, the base (V); this means there is lack of the regular indicative concord between subject and finite verb in the 3rd person singular present, and the present and past tenses are indistinguishable. This subjunctive can be used with any verb in subordinate *that*-clauses when the main clause contains an expression of recommendation, resolution, demand, and so on (**We demand, require, move, insist, suggest, ask, etc that...**). The use of this subjunctive occurs chiefly in formal style (and especially in AmE) where in less formal contexts one would rather make use of other devices, such as to-infinitive or *should* + infinitive:

   *It is was necessary that every member inform himself of these rules*

   *It is necessary that every member should inform himself of these rules*

   *It is necessary for every member to inform himself of these rules*

(b) The **Formulaic Subjunctive** also consists of the base (V) but is only used in clauses in certain set expressions which have to be learned as wholes (see 7.64):

   **Come what may, we will go ahead**

   **God save the Queen!**

   **Suffice it to say that...**

   **Be that as it may...**

   **Heaven forbid that...**

(c) The **Subjunctive** were is hypothetical in meaning and is used in conditional and concessive clauses and in subordinate clauses after
optative verbs like wish (see 11.48). It occurs as the 1st and 3rd person singular past of the verb be, matching the indicative was, which is the more common in less formal style:

If she \( \text{were} \) to do something like that, . . .

He spoke to me as if I \( \text{were} \) deaf

I wish I \( \text{were} \) dead

Note

Only \( \text{were} \) is acceptable in ‘As it were’ (= so to speak); \( \text{were} \) is usual in ‘If I were you’.

3.47

Modal past

Just as \( \text{was} \) could replace \( \text{were} \) in ‘If I were rich’, so in closed or unreal conditions involving all other verbs than be, it is the past tense that conveys the impossibility. See further, 11.48. Other modal or quasi-modal uses of the past are illustrated by

I \text{wondered} if you’d like a drink

which involves an attitudinal rather than a time distinction from ‘I \text{wonder} if you’d like a drink’, and

We \text{were catching} the 8 o’clock train and it is nearly 8 o’clock already which seems to depend on a covert subordinating clause such as ‘We agreed that . . .’ in which the past tense is purely temporal.

The uses of the modal auxiliaries

3.48

\text{can/could}

\text{can}

(1) Ability

\( = \text{be able to, be capable of, know how to} \)

He can speak English but he can’t write it very well (‘He is able to speak/ capable of speaking . . .’)

(2) Permission

\( = \text{be allowed to, be permitted to} \)

\( \text{(Can is less formal than} \text{may in this sense)} \)

\text{Can } \text{I smoke in here? (Am I allowed to smoke in here?)}

3.49

\text{MAY/MIGHT}

\text{may}

(1) Permission

\( = \text{be allowed to} \)

\( \text{(In this sense} \text{may is more formal than} \text{can. Instead of} \text{mustn’t, the stronger} \text{may not} \text{is often used in the negative to express prohibition.)} \)

You may borrow my car if you like

You are not allowed to borrow my car

(2) Possibility (usually factual)

\text{The road may be blocked (‘It is possible that the road is blocked’; less probably: ‘It is possible to block the road’)}
3.50

**SHALL/SHOULD**

shall (volitional use; cf 3.37)

1. Willingness on the part of the speaker in 2nd and 3rd person. Restricted use
   - He shall get his money
   - You shall do exactly as you wish

2. Intention on the part of the speaker, only in 1st person
   - I shan’t be long
   - We shall let you know our decision
   - We shall overcome

3. a) Insistence. Restricted use
   - You shall do as I say
   - He shall be punished
   - The vendor shall maintain the equipment in good repair

   b) Legal and quasi-legal injunction

Of these three meanings it is only the one of intention that is widely used today. Shall is, on the whole and especially outside BrE, an infrequent auxiliary with restricted use compared with should, will, and would; will is generally preferred, except in 1st person questions:

Shall/*Will I come at once?

In the first person plural, eg

What shall/will we drink?

shall asks for instructions, and will is non-volitional future (especially in AmE). Will I/we has become increasingly common not only in contexts of non-volitional futurity (Will I see you later?), but also in sentences expressing helplessness, perplexity, etc:

How will I get there? What will I do? Which will I take?

This usage is predominantly AmE (though should is commonly preferred) but examples may be found in BrE too. A similar meaning is also conveyed by be going 1st

What are we going to do?

3.51

**WILL/WOULD**

will (cf 3.37)

1. Willingness. Used in polite requests
   - He’ll help you if you ask him
   - Will you (please, kindly, etc.) open the window?

2. Intention. Usually contracted ‘ll; mainly 1st person
   - I’ll write as soon as I can
   - We won’t stay longer than two hours

3. Insistence. Stressed, hence no ‘ll contraction
   - He’ll do it, whatever you say ('He insists on doing it...')
   - (Cf He ‘shall do it, whatever you say = 'I insist on his doing it...')
   - He’ll keep interrupting me

4. Prediction
   - Cf the similar meanings of other expressions for logical necessity and habitual present. The contracted form ‘ll is common.
   - (a) Specific prediction:
     - The game will be finished by now
   - (b) Timeless prediction:
     - Oil will float on water
   - (c) Habitual prediction:
     - He’ll (always) talk for hours if you give him the chance
would

(1) Willingness Would you excuse me?
(2) Insistence It's your own fault; you'd would take
the baby with you

(3) Characteristic activity in the past (often aspectual in effect: 3.26 f)
Every morning he would go for a long walk (i.e. 'it was customary')
John 'would make a mess of it (informal = 'it was typical')

(4) Contingent use in the main clause of a conditional sentence
He would smoke too much if I didn't stop him

(5) Probability That would be his mother

Note
Volition with preference is expressed with would rather/sooner:
A: Would you like tea or would you rather have coffee?
B: I think I'd rather have tea.
The expression with sooner is informal.

3.52 MUST

(1) Obligation or compulsion in the present tense (= be obliged to, have (got) to);
except in reported speech, only had to (not must) is used in the past. There are
two negatives: (1) = 'not be obliged to': needn't, don't have to; (2) = 'be obliged not to': mustn't. See 3.22, 3.49, 7.42.
You must be back by 10 o'clock
Yesterday you had to be back by 10 o'clock
Yesterday you said you had to be back by 10 o'clock
You must be back by 10 o'clock

(2) (Logical) necessity
Must is not used in sentences with negative or interrogative meanings, can be used instead.
Must can occur in superficially interrogative but answer-assuming sentences.
There must be a mistake
but: There cannot be a mistake
Mustn't there be another reason for his behaviour?

2.54 The tense of modals

3.53 OUGHT TO Obligation; logical necessity or expectation You ought to start at once
You ought to be here by now
Note
Ought to and should both denote obligation and logical necessity, but are less categorical than must and have to. Ought to is often felt to be awkward in questions involving inversion, and should is preferred. Still less categorical than ought is had/’d better/best (plus bare infinitive):
A: Must you go?
b: Well, I don’t have to, but I think I’d better (go).

3.54 The tense of modals
Only some of the modals have corresponding present and past forms:

<table>
<thead>
<tr>
<th>Present</th>
<th>Past</th>
</tr>
</thead>
<tbody>
<tr>
<td>can</td>
<td>could</td>
</tr>
<tr>
<td>may</td>
<td>could (might)</td>
</tr>
<tr>
<td>shall</td>
<td>should</td>
</tr>
<tr>
<td>will/y’ll</td>
<td>would’d</td>
</tr>
<tr>
<td>must</td>
<td>(had to)</td>
</tr>
<tr>
<td>—</td>
<td>use’d to</td>
</tr>
<tr>
<td>ought to</td>
<td>—</td>
</tr>
<tr>
<td>need</td>
<td>—</td>
</tr>
<tr>
<td>dare</td>
<td>—</td>
</tr>
</tbody>
</table>

He can speak English now
He couldn’t come yesterday
He’ll do anything for
He wouldn’t come when I asked money
him yesterday

The usual past tense of may denoting permission is could:
Today, we (can) stay the whole afternoon

Yesterday, we could only stay for a few minutes

The following modals are not used in the past tense except in reported speech: must, ought to, and need (but cf 3.22). Had to serves as the past of both must and have to:

He (must) leave now
He (had to) leave in a hurry yesterday
FOUR
NOUNS, PRONOUNS, AND THE
BASIC NOUN PHRASE

4.1
The basic noun phrase
The noun phrase typically functions as subject, object, complement or sentences, and as complement in prepositional phrases. Consider the different subjects in the following:

(a) The girl
(b) The pretty girl
(c) The pretty girl in the corner
(d) The pretty girl who became angry
(e) She

Since noun phrases of the types illustrated in (b–d) include elements that will be dealt with in later chapters (adjectives, prepositional phrases, etc), it will be convenient to postpone the treatment of the noun phrase incorporating such items. We shall deal here with the elements found in those noun phrases that consist of pronouns and numerals, and of nouns with articles or other closed-system items that can occur before the noun head, such as determiners like all.

Noun clauses
4.2
It is necessary, both for grammatical and semantic reasons, to see nouns as falling into different subclasses. This is easily demonstrated by taking the four nouns John, bottle, furniture and cake and considering the extent to which it is possible for each to appear as head of the noun phrase operating as object in the following sentence (some in the fourth line is the unstressed determiner: 4.5):

Yesterday the children [must
* ought to
* needn’t
? daren’t
dared not
(did not dare)]
go out and play

He said the children [must
ought to
needn’t
daren’t
dared not
didn’t dare]
go out and play

3.55
The modals and aspect
The perfective and progressive aspects are normally excluded when the modal expresses ‘ability’ or ‘permission’, and also when shall or will express ‘volition’. These aspects are freely used, however, with other modal meanings: eg

‘s possibility’
He may have missed the train
He may have been visiting his mother
He can’t be swimming all day
He can’t have been working

‘necessity’
He must have left his umbrella on the bus
I must be dreaming
You must have been sitting in the sun

‘prediction’
The guests will have arrived by now
John will still be reading his paper

Bibliographical note
On tense and aspect, see Allen (1966); Palmer (1974); Schopf (1969); on the meanings of the modal auxiliaries, see Halliday (1970); Leech (1971); Lyons (1977).
## Nouns, pronouns, and the Isaac noun phrase

<table>
<thead>
<tr>
<th>(1)</th>
<th>(2)</th>
<th>(3)</th>
<th>(4)</th>
</tr>
</thead>
<tbody>
<tr>
<td>John</td>
<td>*bottle</td>
<td>furniture</td>
<td>cake</td>
</tr>
<tr>
<td>*the John</td>
<td>the bottle</td>
<td>the furniture</td>
<td>the cake</td>
</tr>
<tr>
<td>*a John</td>
<td>a bottle</td>
<td>*a furniture</td>
<td>a cake</td>
</tr>
<tr>
<td>*some John</td>
<td>*some bottle</td>
<td>some furniture</td>
<td>some cake</td>
</tr>
<tr>
<td>*Johns</td>
<td>bottles</td>
<td>*furniture</td>
<td>cakes</td>
</tr>
</tbody>
</table>

The difference between column 1 (with its four impossible usages) and column 4 (with none) indicates the degree of variation between classes. Nouns that behave like John in column 1 (Paris, Mississippi, Gandhi, ...) are **proper nouns**, further discussed in 4.23. The nouns in columns 2, 3 and 4 are all **common nouns**, but there are important differences within this class. Nouns which behave like bottle in column 2 (chair, word, finger, remark, ...), which must be seen as individual countable entities and cannot be viewed as an undifferentiated mass, are called **count nouns**. Those conforming like furniture to the pattern of column 3 (grass, warmth, humour, ...) must by contrast be seen as an undifferentiated mass or continuum, and we call them **non-count nouns**. Finally in column 4 we have nouns which combine the characteristics of count and non-count nouns (cake, paper, stone, ...); that is, we can view stone as the non-count material (as in column 3) constituting the entity a stone (as in column 2) which can be picked up from a pile of stones and individually thrown.

### 4.3

It will be noticed that the categorization count and non-count cuts across the traditional distinction between 'abstract' (broadly, immaterial) nouns like warmth, and 'concrete' (broadly, tangible) nouns like bottle. But while abstract nouns may be count like remark or non-count like warmth, there is a considerable degree of overlap between abstract and non-count. This does not proceed from nature but is language-specific, and we list some examples which are non-count in English but count nouns in some other languages:

- anger, applause, behaviour, chaos, chess, conduct, courage, dancing, education, harm, homework, hospitality, leisure, melancholy, moonlight, parking, photography, poetry, progress, publicity, research (as in do some research), resistance, safety, shopping, smoking, sunshine, violence, weather

**Note**

Another categorization that cuts across the count and non-count distinction will identify a small class of nouns that behave like most adjectives in being gradable. Though such degree nouns are chiefly non-count ('His acts of great foolishness' = 'His acts

### 4.4

Nevertheless, when we turn to the large class of nouns which can be both count and non-count, we see that there is often considerable difference in meaning involved and that this corresponds broadly to concreteness or particularization in the count usage and abstractness or generalization in the non-count usage. For example:

**Count**

- I've had many difficulties
- He's had many bad experiences
- Buy an evening paper
- She was a beauty in her youth
- The talks will take place in Paris
- There were bright lights and harsh sounds
- The lambs were eating quietly

**Non-COUNT**

- He's not had much difficulty
- This job requires experience
- Wrap the parcel in brown paper
- She had beauty in her youth
- I dislike idle talk
- Light travels faster than sound
- There is lamb on the menu

In many cases the type of distinction between lamb count and lamb non-count is achieved by separate lexical items: (a) sheep ~ (some) mutton; (a) calf ~ (some) veal; (a) pig ~ (some) pork; (a) loaf ~ (some) bread; (a) table ~ (some) furniture.

**Note**

Virtually all non-count nouns can be treated as count nouns when used in classificatory senses:

- There are several French wines available (= kinds of wine)
- This is a bread I greatly enjoy (= kind of bread)

### 4.5

**Determiners**

There are six classes of determiners with respect to their co-occurrence with the noun classes singular count (such as bottle), plural count (such as bottles), and non-count nouns (such as furniture). The check marks in the figures that follow indicate which noun classes will co-occur with members of the determiner class concerned.
4.6 Closed-system premodifiers

In addition to determiners, there is a large number of other closed-system items that occur before the head of the noun phrase. These form three classes (predeterminers, ordinals, and quantifiers) which have been set up on the basis of the possible positions that they can have in relation to determiners and to each other. Within each of the three classes, we will make distinctions according to their patterning with the classes of singular count, plural count, and non-count nouns.

Note

[a] Many of the determiners can be pronominal (4.78): "Either book ~ Either of the books ~ You can have either"

[b] Every can co-occur with possessives: his every word (= "each of his words").

4.7 Predeterminers

We will also include here some open-class premodifiers that commute to a significant extent with closed-system items, e.g.: three times (cf.: once, twice), a large quantity of (cf.: much).

Predeterminers

4.7

All, both, half

These predeterminers can occur only before articles or demonstratives but, since they are themselves quantifiers, they do not occur with the following "quantitative" determiners: every, (n)either, each, some, any, no, enough.

All, both, and half have of-constructions, which are optional with nouns and obligatory with personal pronouns:

- all (of) the meat:
  - all of it
- both (of) the students:
  - both of them
- half (of) the time:
  - half of it

With a quantifier following, the of-construction is preferred (especially in AmE):

- all of the many boys

All three can be used pronominally:

- All/both/half passed their exams
All and both (but not half) can occur after the head, either immediately or within the predication:

The students\{all\} passed their exams
They\{both\} were all hungry
They may have all finished

The predeterminer both and the determiners either and neither are not plural proper but 'dual', i.e., they can refer only to two. Compared with the numeral two, both is emphatic:

Both (the)\{students\ were excellent

All is rare with singular concrete count nouns (?I haven't used all the pencil) though it is less rare with contrastive stress: I haven't read all the book, where book is treated as a kind of divisible mass. The normal constructions would be all of the book or the whole book.

Before certain singular temporal nouns, and especially in adjunct phrases, all is often used with the zero article: I haven't seen him all day.

Note

[a] There is also an adverbial half (as in half wine, half water) which occurs in familiar emphatic negation and can precede enough:

He hasn't (half) enough money!

Added to numbers from one upwards, a half co-occurs with plural nouns: one and a half days. A preceding determiner or numeral is common with of-construction (my half of the room, one half of her time), but infrequent otherwise.

[b] The postposed all in 'They were all hungry' must not be confused with its use as an informal intensifying adverb in 'He is all upset' (5.23). Note b).

[c] The items such (a), what (a) as predeterminers are discussed in 5.27.

4.8 Double, twice, three\four \ldots times
The second type of predeterminer includes double, twice, three times, etc., which occur with non-count and plural count nouns, and with singular count nouns denoting number, amount, etc.:

double their salaries
twice his strength
three times this amount

Three, four, etc. times as well as once can co-occur with the determiners a, every, each, and (less commonly) per to form 'distributive' expressions with a temporal noun as head:

4.12 Ordinal numerals and general ordinals

Once, twice, three\four \ldots times

Note

One may be regarded as a stressed form of the indefinite article: 'I would like alone large cigar'. In consequence, although the definite article may precede any cardinal, the indefinite can not.

4.12 Ordinal numerals and general ordinals

In addition to the ordinals which have a one-for-one relation with the cardinals (fourth ~ four; twentieth ~ twenty), we consider here items like next, last, (an)other, additional, which resemble them grammatically and semantically. Ordinal numerals, except first, co-occur only with count nouns. All ordinals usually precede any cardinal numbers in the noun phrase:

The first three planes were American

The general ordinals, however, may be used freely before or after cardinals, according to the meaning required:
His last two books were novels

Note
Another has two functions. It can be the unstressed form of one other (cf 4.11 Note) or it can have the same meaning as 'second' with indefinite article:
I don't like this house: I'd prefer another one
Another blue car
A second two volumes of poetry

Quantifiers
4.13
There are two small groups of closed-system quantifiers:

(1) many, a few, and several co-occur only with plural count nouns:
The few words he spoke were well chosen

(2) much and a little co-occur only with non-count nouns:
There hasn't been much good weather recently

Several is rarely (and much virtually never) preceded by a determiner, and in the case of few and little there is a positive/negative contrast according as the indefinite article is or is not used:

He took

a few biscuits (= several)
few biscuits (= not many)
a little butter (= some)
little butter (= not much)

Since the first of these has a plural count noun and the third a non-count noun, neither of which (4.5) co-occurs with the indefinite article, it will be clear that in these instances a belongs to the quantifier alone.

Note
[a] The quantifiers a little must be distinguished from the homonymous adjective as in A little bird was singing.
[b] Many and few can be used predicatively in formal style (His faults were many), and many has the additional potentiality of functioning as a preterm with singular count nouns preceded by a(n):

Many an ambitious student (= Many ambitious students)
[c] The quantity enough is used with both count and non-count nouns:

There are (not) enough chairs
There is (not) enough furniture

Occasionally it follows the noun (especially non-count) but this strikes many people as archaic or dialectal.

4.14
There is also a large open class of phrasal quantifiers. Some can co-occur equally with non-count and plural count nouns:

The room contained plenty of

a lot of

students

furniture

These (especially lots) are chiefly used informally, though plenty of is stylistically neutral in the sense 'sufficient'. Others are restricted to occurring with non-count nouns:

The room contained

a great deal of

a large quantity

of

money

or to plural count nouns:

The room contained a

a large number of students

As these examples suggest, it is usual to find the indefinite article and a quantifying adjective, the latter being obligatory in Standard English with deal.

4.15
The phrasal quantifiers provide a means of imposing countability on non-count nouns as the following partitive expressions illustrate:

GENERAL PARTITIVES

[two pieces] of

news

an item

information

a slice of cake

a roast of meat

TYPICAL PARTITIVES

[ a few ]

a bowl of soup

a bottle of wine

MEASURES

a pint of beer

a spoonful of medicine

a pound of butter

Reference and the articles
4.16
Specific/generic reference
In discussing the use of the articles, it is essential to make a distinction between specific and generic reference. If we say
A lion and two tigers are sleeping in the cage.

the reference is specific, since we have in mind specific specimens of the class 'tiger'. If, on the other hand, we say

Tigers are dangerous animals

the reference is generic, since we are thinking of the class 'tiger' without special reference to specific tigers.

The distinctions that are important for count nouns with specific reference disappear with generic reference. This is so because generic reference is used to denote what is normal or typical for members of a class. Consequently, the distinctions of number and definiteness are neutralized since they are no longer relevant for the generic concept. Singular or plural, definite or indefinite can sometimes be used without change in the generic meaning, though plural definite occurs chiety with nationality names (cf 4.18):

The German
A German

The Germans
Germans

At least the following three forms can be used generically with a count noun:

The tiger
A tiger

Tigers are dangerous animals

But with non-count nouns, only the zero article is possible:

Music can be soothing

Note

There is considerable (though by no means complete) interdependence between the dynamic/static dichotomy in the verb phrase and the specific/generic dichotomy in the noun phrase, as appears in the following examples:

generic reference/simple aspect

The tiger lives in the jungle

specific reference

The tiger at this circus performs twice a day

The tiger is sleeping in the cage

generic reference/simple aspect

The English drink beer in pubs

specific reference

The Englishmen (who live here) drink beer every day

The Englishmen are just now drinking beer in the garden

4.18 Generic reference

System of article usage

We can thus set up two different systems of article use depending on the type of reference:

<table>
<thead>
<tr>
<th>DEFINITE</th>
<th>INDEFINITE</th>
</tr>
</thead>
<tbody>
<tr>
<td>specific reference</td>
<td></td>
</tr>
<tr>
<td>the tiger</td>
<td>the ink</td>
</tr>
<tr>
<td>the tigers</td>
<td>(some) ink</td>
</tr>
<tr>
<td>generic reference</td>
<td></td>
</tr>
<tr>
<td>the tiger</td>
<td></td>
</tr>
<tr>
<td>a tiger</td>
<td></td>
</tr>
<tr>
<td>(some) tigers</td>
<td></td>
</tr>
</tbody>
</table>

With definite specific reference, the definite article is used for all noun classes:

Where is the pen?
Where are the pens?
I bought it.

With indefinite specific reference, singular count nouns take the indefinite article a(n), while non-count and plural count nouns take zero article or unstressed some (any in non-assertive contexts, 4.93):

I want a pen/some pens/some ink
I don't want a pen/any pens/any ink

Generic reference

4.18

Nationality words and adjectives as head

There are two kinds of adjectives that can act as noun-phrase head with generic reference (cf 5.6 ff):

(a) PLURAL PERSONAL (for example: the French = the French nation; the rich = those who are rich)

(b) SINGULAR NON-PERSONAL ABSTRACT (for example: the evil = that which is evil)

The lexical variation in a number of nationality words, as between an Englishman/several Englishmen/the English, depending on type of reference, appears from the following table.

Where nationality words have no double form (like English, Englishman), the + plural can be both generic and specific:
The Greeks are musical [generic]
The Greeks that I know are musical [specific]

4.19 Non-count and plural count nouns

When they have generic reference, both concrete and abstract non-count nouns, and usually also plural count nouns, are used with the zero article:

He likes wine, wood, cream cheese, . . .
he likes music, chess, literature, history, skiing, . . .

Postmodification by an of-phrase usually requires the definite article with a head noun, which thus has limited generic (partitive) reference:

He likes the wine(s) of France
He likes the music the countryside the lakes

Similarly, the wines of this shop is an instance of limited generic reference, in the sense that it does not refer to any particular wines at any one time. Postmodification with other prepositions is less dependent on a preceding definite article:

Mrs Nelson adores the glass of Venice
Mrs Nelson adores the glass from Venice

This type of postmodification structure should be compared to the frequent alternative with an adjectival premodification. In comparison with some other languages English tends to make a liberal interpretation of the concept 'generic' in such cases, so that the zero article is used also where the reference of the noun head is restricted by premodification.

Note
[b] Arabic is used in Arabic numerals (as opposed to Roman numerals) and in the Arabic language; he speaks Arabic fluently. But an Arabian camel.
[c] A Britisher is colloquial (esp AmE).
[d] The inhabitants themselves prefer Scots and Scottish to Scotch, which however is commonly used in such phrases as Scotch terrier, Scotch whisky; contrast the Scottish universities, the Scottish Highlands, a Scottish accent, etc, denoting nationality rather than type.
[e] Nationality nouns tend to be used only of men: He is a Spaniard but she is Swedish.
### 4.21 Common nouns with zero article

John asked his wife to put on the kettle while he looked in the paper to see what was on the radio.

No prior mention of a kettle, a paper, a radio is needed, since these things are part of the cultural situation.

On a broader plane, we talk of the sun, the moon, the stars, the sky as aspects of experience common to mankind as a whole. These seem to require no earlier indefinite reference because each term is so specific as to be in fact unique for practical human purposes. This gives them something approaching the status of those proper names which are based on common count nouns: the Bible, the United States, for example (cf. 4.24ff).

**Note**

[a] The indefinite article used with a proper name means 'a certain', 'one giving his name as':

A Mr Johnson wants to speak to you

[b] The definite article given heavy stress is used (especially informally) to indicate superlative quality:

Chelsea is the place for young people

Are you the Mr Johnson (= the famous)?

### Specific reference

#### 4.20

**Indefinite and definite**

Just as we have seen in 4.16 a correspondence between aspect and reference in respect of generic and specific, so we have seen in 3.31 a correspondence between the simple and perfective in respect of what must be regarded as the basic article contrast:

- *An* intruder has stolen *a* vase;
- *The* intruder stole *the* vase from *a* locked cupboard;
- *The* cupboard was smashed open.

As we see in this (unusually explicit) example, the definite article presupposes an earlier mention of the item so determined. But in actual usage the relation between presupposition and the definite article may be much less overt. For example, a conversation may begin:

*The* house on the corner is for sale

and the postmodification passes for some such unspoken preamble as

*There is, as you know,* *a* house on the corner

Compare also *What is the climate like?* – that is, the climate of the area being discussed. Even more covert are the presuppositions which permit the definite article in examples like the following:

<table>
<thead>
<tr>
<th>NON-COUNT NOUNS</th>
<th>Canadian paper</th>
<th>the paper of Canada</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chinese history</td>
<td>paper from China</td>
<td>the history of China</td>
</tr>
<tr>
<td>Trotskyite politics</td>
<td>the politics of Trotsky</td>
<td></td>
</tr>
<tr>
<td>American literature</td>
<td>the literature of America</td>
<td></td>
</tr>
<tr>
<td>Restoration comedy</td>
<td>the comedy of Restoration</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PLURAL COUNT NOUNS</th>
<th>Japanese cameras</th>
<th>cameras from Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oriental women</td>
<td>the women of the Orient</td>
<td></td>
</tr>
</tbody>
</table>

The zero article is also used with other plural nouns that are not unambiguously generic:

- Appearances can be deceptive
- Things aren't what they used to be

**Note**

Just as non-count nouns can be used as count (4.4 Note), so count nouns can be used as non-count in a generic sense:

- This bread tastes of *onion*; has it been alongside *onions*?

#### 4.21 Common nouns with zero article

There are a number of count nouns that take the zero article in abstract or rather specialized use, chiefly in certain idiomatic expressions (with verbs like be and go and with prepositions):

- *go by car* but *sit in/look at... the car*
- *be in bed* make/sit on... the bed
- *go to school* go into/take a look at... the school (an institution) (a building)

The following list gives a number of common expressions with zero article; for comparison, usage with the definite article is also illustrated.

**Seasons:** spring, summer, autumn (BrE), fall (AmE), winter

_Eg_ In winter, we go skiing. After the winter is over, the swallows will return.

**'Institutions'** (often with _at, in, to, etc)_

<table>
<thead>
<tr>
<th>be in</th>
<th>church</th>
<th>lie down on the bed</th>
</tr>
</thead>
<tbody>
<tr>
<td>prison</td>
<td>admire the church</td>
<td></td>
</tr>
<tr>
<td>hospital (esp BrE)</td>
<td>walk round the prison</td>
<td></td>
</tr>
<tr>
<td>class (esp AmE)</td>
<td>redecorate the hospital</td>
<td></td>
</tr>
</tbody>
</table>
### Nouns, pronouns, and the basic noun phrase

<table>
<thead>
<tr>
<th>be at</th>
<th>school</th>
<th>drive past the school</th>
</tr>
</thead>
<tbody>
<tr>
<td>college</td>
<td>look out towards the sea</td>
<td></td>
</tr>
<tr>
<td>sea</td>
<td>be at/go to study at the university (esp AmE)</td>
<td></td>
</tr>
<tr>
<td>go to</td>
<td></td>
<td></td>
</tr>
<tr>
<td>university</td>
<td>approach the town</td>
<td></td>
</tr>
<tr>
<td>be at/go home</td>
<td></td>
<td></td>
</tr>
<tr>
<td>be in/leave town</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Means of Transport (with by)

<table>
<thead>
<tr>
<th>travel</th>
<th>sit on the bicycle</th>
</tr>
</thead>
<tbody>
<tr>
<td>leave by</td>
<td>be on the bus</td>
</tr>
<tr>
<td>car</td>
<td>sleep in the car</td>
</tr>
<tr>
<td>boat</td>
<td>sit in the boat</td>
</tr>
<tr>
<td>train</td>
<td>take the train</td>
</tr>
<tr>
<td>plane</td>
<td>be on the plane</td>
</tr>
</tbody>
</table>

### Times of the Day and Night (particularly with at, by, after, before)

- at dawn/daybreak, when day breaks
- during the day
- at sunrise/sunset
- admire the sunrise/sunset
- at around noon/midnight
- in the afternoon
- at dusk/twilight
- see nothing in the dusk
- at/by night
- wake up in the night
- (by) day and night
- in the daytime
- before morning came (rather evening came on
- in/during the morning
- after night fell (style)
- in the evening
- in the night

### Meals

<table>
<thead>
<tr>
<th>have</th>
<th>breakfast (esp AmE) the breakfast was good</th>
</tr>
</thead>
<tbody>
<tr>
<td>before</td>
<td>lunch he enjoyed the lunch</td>
</tr>
<tr>
<td>at</td>
<td>tea (esp BrE) prepare (the) dinner</td>
</tr>
<tr>
<td>after</td>
<td>cocktails (esp AmE)</td>
</tr>
<tr>
<td>stay for</td>
<td>dinner</td>
</tr>
<tr>
<td>dinner will be served soon</td>
<td>supper</td>
</tr>
</tbody>
</table>

### Illnesses

- appendicitis: the plague
- anaemia: (the) flu
- diabetes: (the) measles
- influenza: (the) mumps

### Article usage with common nouns in intensive relation

#### Parallel Structures

- arm in arm
- he took her by the arm
- hand in hand
- a paper in his hand
day by day
- teaspoonful by teaspoonful
to's neither man nor boy
- he's neither man nor boy
husband and wife
- man to man
face to face
- from dawn to dusk
- from dawn to dusk
from day to day
- from beginning to end
- from the beginning of the day to
- to the end of it
from right to left
- keep to the right
from west to north
- he lives in the north

**Note**

Compare also familiar or peremptory vocatives: That's right, girl! Come here, man!

Vocatives take neither definite nor indefinite article in English.

#### 4.22 Article usage with common nouns in intensive relation

Unlike many other languages, English requires the definite or indefinite article with the count noun complement in an intensive relation (7.6).

With indefinite reference, the indefinite article is used:

1. **(i) intensive complementation**
   - John became a businessman
2. **(ii) complex transitive complementation**
   - (active verb)
   - Mary considered John a genius
3. **(iii) complex transitive complementation**
   - (passive verb)
   - John was taken for a linguisit

The complement of *turn* and *go*, however, has zero article (12.9 Note a):

John started out a music student before he turned linguist

Definite reference requires the definite article:

1. **(i) John became**
2. **(ii) Mary considered John**
3. **(iii) John was taken for** the genius of the family
However, the zero article may be used with the noun complement after copulas and ‘naming verbs’, such as appoint, declare, elect, when the noun designates a unique office or task:

(i) John is (the) captain of the team
(ii) They elected him
(iii) He was elected (the) President of the United States

**Unique reference**

**Proper nouns**

**4.23**

Proper nouns are names of specific people (Shakespeare), places (Milwaukee), countries (Australia), months (September), days (Thursday), holidays (Christmas), magazines (Vogue), and so forth. Names have ‘unique’ reference, and (as we have seen in 4.2) do not share such characteristics of common nouns as article contrast. But when the names have restrictive modification to give a partitive meaning to the name (cf 4.19), proper nouns take the (cataphoric) definite article.

**UNIQUE MEANING**  
**PARTITIVE MEANING**

during Easter  
during the Easter of that year

in England  
in the England of Queen Elizabeth

in Denmark  
in the Denmark of today

Chicago  
the Chicago I like (= ‘the aspect of Chicago’)

Shakespeare  
the young Shakespeare

Proper names can be converted into common nouns (App I.29):

Shakespeare (the author)  
{ a Shakespeare (‘an author like S.’)

Shakespeares (‘authors like S.’ or ‘copies of the works of S.’)

**Note**

Proper nouns are written with initial capital letters. So also, frequently, are a number of common nouns with unique reference, which are therefore close to proper nouns, e.g: fate, fortune, heaven, hell, nature, paradise.

**4.24**

The following list exemplifies the main classes of proper nouns:

**Personal names (with or without titles; 4.25)**

**Calendar items (4.26):**

(a) Festivals

(b) Months and days of the week

**4.25**

**Personal names**

Personal names with or without appositive titles:

Dr Watson  
Lady Churchill

President Rompduou  
Cardinal Spelman

Mr and Mrs Johnson  
Judge Darling (mainly AmE)

**Note the following exceptions:**

the Emperor (Napoleon)  
the Lord (God)

(but: Emperor Haile Selassie)  
(the) Czar (Alexander)

the Duke (of Wellington)

The article may also precede some other titles, including Lord and Lady in formal use. Family relations with unique reference behave like proper nouns:

Father (Daddy, Dad, familiar) is here

Mother (Mummy, Mum, familiar) is out

Uncle will come on Saturday

**Compare:**

The father was the tallest in the family

**4.26**

**Calendar items**

(a) Names of festivals:

Christmas (Day)  
Independence Day

Easter (Sunday)  
Whit(sun) (mainly BrE)

Good Friday  
Passover

(b) Names of the months and the days of the week:

January, February, ...  
Monday, Tuesday, ...
Nouns, pronouns, and the basic noun phrase

4.27 Geographical names

(a) Names of continents:

(North) America (Medieval) Europe
(Central) Australia (East) Africa

Note Antarctica but the Antarctic, like the Arctic.

(b) Names of countries, counties, states, etc (normally no article with premodifying adjective):

(modern) Brazil (industrial) Staffordshire
(west) Scotland (northern) Arkansas

Note Argentina but the Argentine, the Ruhr, the Saar, the Sahara, the Ukraine, the Crimea, (the) Lebanon, the Midwest; the Everglades (and other: plural names, see 4.30).

(c) Cities and towns (normally no article with premodifying word):

(downtown) Boston (ancient) Rome (suburban) London

Note The Hague; the Bronx; the City, the West End, the East End (of London).

(d) Lakes:

Lake Windermere Silver Lake

(e) Mountains:

Mount Everest Ve-ruvius

Note the Mount of Olives (cf 4.19).

4.28 Name + common noun

Name + common noun denoting buildings, streets, bridges, etc. There is a regular accentuation pattern as in Hampstead Heath, except that names ending in Street have the converse: LAMB Street.

Note

Many such items can readily be used as count nouns:

I hate Mondays
There was an April in my childhood I well remember

4.29 Proper nouns with definite article

The difference between an ordinary common noun and a common noun turned name is that the unique reference of the name has been institutionalized, as is made overt in writing by the use of initial capitals. The following structural classification illustrates the use of such proper nouns which retain the phrasal definite article:

WITHOUT MODIFICATION

The Guardian

WITH PREMODIFICATION

The Suez Canal

the Ford Foundation

WITH POSTMODIFICATION

the House of Commons

the Institute of Psychiatry

the Bay of Biscay

the Cambridge College of Arts and Technology

the District of Columbia

ELLIPTED ELEMENTS

The original structure of a proper noun is sometimes unclear when one element has been dropped and the elliptic form has become institutionalized as the full name:

the Tate (Gallery) the Atlantic (Ocean)

the Mermaid (Theatre) the (River) Thames
Note
When the elided item is a plural or a collective implying plurality, the truncated name is pluralized:
the Canary Islands—the Canaries
the Pennine Range (or Chain)—the Pennines

4.30
The following classes of proper nouns are used with the definite article:
(a) Plural names
the Netherlands
the Midlands
the Hebrides, the Shetlands, the Bahamas
the Himalayas, the Alps, the Rockies, the Pyrenees
So also, more generally, the names of woods, families, etc: the Williams (= the Wilson family).
(b) Geographical names
Rivers: the Avon, the Danube, the Euphrates
Seas: the Pacific (Ocean), the Baltic, the Mediterranean Canals: the Panama Canal, the Erie Canal
(c) Public institutions, facilities, etc
Hotels and restaurants: the Grand (Hotel), the Savoy, the Hilton Theatres, cinemas, clubs, etc: the Globe, the Athenæum Museums, libraries, etc: the Tate, the British Museum, the Huntington
Note Drury Lane, Covent Garden.
(d) Newspapers: the Economist, the New York Times, the Observer
After genitives and possessives the article is dropped: today's New York Times.
Note that magazines and periodicals normally have the zero article:
Language, Life, Time, Punch, New Scientist.

Number
Invariable nouns
4.31
The English number system comprises singular, which denotes 'one', and plural, which denotes 'more than one'. The singular category includes common non-count nouns and proper nouns. Count nouns are variable, occurring with either singular or plural number (boy—boys), or have invariable plural (cattle). Fig 4:1 provides a summary, with relevant section references.

4.32 Invariable nouns ending in -s

| singular invariables | non-count nouns: concrete gold, furniture
| non-count nouns: abstract music, homework
| proper nouns Henry, the Thames
| some nouns ending in-s news (4.32)
| abstract adjetival heads the beautiful, the true (4.18)
| summation plurals scissors (4.33)
| other pluralia tantum in-s thanks (4.34)
| some plural proper nouns the Netherlands (4.30)
| unmarked plural nouns cattle (4.35)
| personal adjetival heads the rich (4.18)

| plural invariables |
| regular plurals |
| boy |
| boys (4.36) |
| variable plurals |
| voice |
| calf |
| sculler (4.36) |
| mutation |
| foot |
| feet (4.40) |
| en plural ox |
| oxen (4.41) |
| zero |
| sheep |
| sheep (4.43-45) |

irregular plurals
| -us → -i |
| radius |
| radii (4.48) |
| -a → -ae |
| larva |
| larvae (4.49) |
| -um → -a |
| stratum |
| strata (4.50) |
| -es, -ix, -ices |
| matrix |
| matrices (4.51) |

| tableaux (4.54) |
| -zero |
| chassis |
| chassis (4.55) |
| -o → -i |
| tempo |
| tempi (4.56) |
| base + -im |
| cherub |
| cherubim (4.57) |

Fig 4:1 Number classes

Note
In addition to singular and plural number, we may distinguish dual number in the case of both, either, and neither (4.5, 4.7, 4.94) since they can only be used with reference to two. On reference to three or more, see 4.99.

4.32 Invariable nouns ending in -s

Note the following classes which take a singular verb, except where otherwise mentioned:
(a) news: The news is bad today
(b) some diseases: measles, German measles, mumps, rickets, shingles. Some speakers also accept a plural verb,
### Plural invariable nouns

**SUMMATION PLURALS**

Tools and articles of dress consisting of two equal parts which are joined to constitute summation plurals. Countability can be imposed by means of a pair of: a pair of scissors, three pairs of trousers.

<table>
<thead>
<tr>
<th>invariable nouns</th>
<th>pants</th>
<th>invariable nouns</th>
</tr>
</thead>
<tbody>
<tr>
<td>bellows</td>
<td>tongs</td>
<td>binoculars</td>
</tr>
<tr>
<td>binoculars</td>
<td>tweezers</td>
<td>pyjamas (BrE),</td>
</tr>
<tr>
<td>pincers</td>
<td>glasses</td>
<td>pajamas (AmE)</td>
</tr>
<tr>
<td>pliers</td>
<td>spectacles</td>
<td>shorts</td>
</tr>
<tr>
<td>scales</td>
<td>braces (BrE)</td>
<td>suspenders</td>
</tr>
<tr>
<td>scissors</td>
<td>flannels</td>
<td>tight</td>
</tr>
<tr>
<td>shears</td>
<td>knickers</td>
<td>trousers</td>
</tr>
</tbody>
</table>

**Note**

[a] Many of the summation plurals can take the indefinite article, especially with premodification: a garden shears, a curling-tongs, etc (cf zero plurals, 4.43 f): obvious treatment as count nouns is not infrequent: several tweezers.

[b] Plural nouns commonly lose the inflection in premodification: a suspender belt.

### Other 'PLURALIA TANTUM' IN -S

Among other 'pluralia tantum' (ie nouns that only occur in the plural), the following nouns end in -s. In many cases, however, there are forms without -s, sometimes with difference of meaning.

<table>
<thead>
<tr>
<th>pluralia tantum end in -s</th>
</tr>
</thead>
<tbody>
<tr>
<td>the Middle Ages</td>
</tr>
<tr>
<td>amends (make every/all possible amends)</td>
</tr>
<tr>
<td>annals</td>
</tr>
<tr>
<td>the Antipodes</td>
</tr>
<tr>
<td>archives</td>
</tr>
<tr>
<td>arms ('weapons', an arms depot)</td>
</tr>
<tr>
<td>arrears</td>
</tr>
<tr>
<td>ashes (but tobacco ash)</td>
</tr>
<tr>
<td>auspices</td>
</tr>
<tr>
<td>banns (of marriage)</td>
</tr>
</tbody>
</table>

### Variable nouns

<table>
<thead>
<tr>
<th>variable nouns</th>
</tr>
</thead>
<tbody>
<tr>
<td>dregs (coffee dregs)</td>
</tr>
<tr>
<td>earnings</td>
</tr>
<tr>
<td>entrails</td>
</tr>
<tr>
<td>fireworks (but he let off a firework)</td>
</tr>
<tr>
<td>funds ('money'; but a fund, 'a source of money')</td>
</tr>
<tr>
<td>goods (a goods train)</td>
</tr>
<tr>
<td>greens</td>
</tr>
<tr>
<td>guts ('bowels'; but cat-gut)</td>
</tr>
<tr>
<td>heads (heads or tails?)</td>
</tr>
<tr>
<td>holidays (summer holidays, BrE, but he's on holiday, he's taking a holiday in Spain)</td>
</tr>
<tr>
<td>hostel (a host of letters)</td>
</tr>
<tr>
<td>lodgings</td>
</tr>
<tr>
<td>looks (he has a good look)</td>
</tr>
<tr>
<td>the Lords (the House of Lords)</td>
</tr>
<tr>
<td>manners</td>
</tr>
<tr>
<td>means (a man of means)</td>
</tr>
<tr>
<td>oats</td>
</tr>
<tr>
<td>odds (in betting)</td>
</tr>
<tr>
<td>outskirts</td>
</tr>
</tbody>
</table>

**Note**

 Cf also pence in 'a few pence', 'tenpence', beside the regular penny~pennies.

### UNMARKED PLURALS

<table>
<thead>
<tr>
<th>unmarked plurals</th>
</tr>
</thead>
<tbody>
<tr>
<td>cattle</td>
</tr>
<tr>
<td>clergy (but also singular)</td>
</tr>
<tr>
<td>folk (but also informal folks)</td>
</tr>
<tr>
<td>generosity</td>
</tr>
<tr>
<td>people (but regular when = 'nation')</td>
</tr>
<tr>
<td>police</td>
</tr>
<tr>
<td>vermin</td>
</tr>
<tr>
<td>youth (but regular when = 'young man')</td>
</tr>
</tbody>
</table>

### Variable nouns

<table>
<thead>
<tr>
<th>variable nouns</th>
</tr>
</thead>
<tbody>
<tr>
<td>regular plurals</td>
</tr>
<tr>
<td>Variable nouns have two forms, singular and plural, the singular being the form listed in dictionaries. The vast majority of nouns are variable in this way and normally the plural (-s suffix) is fully predictable both in sound and spelling by the same rules as for the -s inflection of verbs (3.5). Spelling creates numerous exceptions, however.</td>
</tr>
</tbody>
</table>
4.39 Voicing + -s plural

(c) PLURAL IN LAST ELEMENT (ie normal)
   assistant director  assistant directors
   So also: boy friend, fountain pen, woman-hater, breakdown,
            grown-up, sit-in, stand-by, take-off, forget-me-not, etc

Irregular plurals
4.38
Irregular plurals are by definition unpredictable and have to be learned as
individual items. In many cases where foreign words are involved, it is of
course helpful to know about pluralization in the relevant languages
particularly Latin and Greek. Thus, on the pattern of
   analysis → analyses

we can infer the correct plurals:
   axis → axes  basis → bases  crisis → crises, etc

But we cannot rely on etymological criteria: plurals like *areas* and *villas*,
for example, do not conform to the Latin pattern (*areae, villae*).

4.39
VOICING + -s PLURAL
Some nouns which in the singular end in the voiceless fricatives spelled
-th and -f/ have voiced fricatives in the plural, followed by /s/. In one case
the voiceless fricative is /s/ and the plural has /æz/: house → houses.

(a) Nouns in -th
   There is no change in spelling.
   With a vowel before the -th, the plural is regular: birth, birth
   length, etc.
   With a vowel before the -th, the plural is again often regular, as with
   cloth, death, faith, moth, but in a few cases the plural has voicing
   (mouth, path), and in several cases there are both regular and voiced
   plurals: bath, oath, sheath, truth, wreath, youth.

(b) Nouns in -f(s)
   Plurals with voicing are spelled -fers.
   Regular plural only: belief, chief, cliff, proof, roof, safe.
   Voiced plural only: calf, elf, half, knife, leaf, life, loof, self, sheaf,
   shelf, thief, wife, wolf.
   Both regular and voiced plurals: dwarf, handkerchief, hoof, scarf,
   wharf.

Note
   The painting term still life has a regular plural: still lifes.
4.40 Mutation
Mutation involves a change of vowel in the following seven nouns:

foot ~ feet  man ~ men  woman ~ women
tooth ~ teeth  louse ~ lice  [o]  [i]
goose ~ geese  mouse ~ mice

Note
With woman/women, the pronunciation differs in the first syllable only, while postman/postmen, Englishman/Englishmen, etc. have no difference in pronunciation at all between singular and plural.

4.41 The -en plural
This occurs in three nouns:

brother  brethren  brethren (with mutation) = ‘fellow members of a religious society’; otherwise regular brothers
child  children  (with vowel change /æ/ → /i/)
ox  oxen

4.42 Zero plural
Some nouns have the same spoken and written form in both singular and plural. Note the difference here between, on the one hand, invariable nouns, which are either singular (This music is too loud) or plural (All the cattle are grazing in the field), and, on the other, zero plural nouns, which can be both singular and plural (This sheep looks small; All those sheep are mine).

4.43 Animal names
Animal names often have zero plurals. They tend to be used partly by people who are especially concerned with animals, partly when the animals are referred to as game. Where there are two plurals, the zero plural is the more common in contexts of hunting, etc. eg. We caught only a few fish, whereas the regular plural is used to denote different individuals or species: the fishes of the Mediterranean.

4.44 The degree of variability with animal names is shown by the following lists:

Regular plural: bird, cow, eagle, hen, rabbit, etc
Usually regular: elk, crab, duck (zero only with the wild bird)

4.45 Foreign Plurals
Both plural: antelope, reindeer, fish, flounder, herring
Usually zero: pike, trout, carp, deer, moose
Only zero: grouse, sheep, plaice, salmon

4.46 Nouns in - (e)s
A few nouns in -(e)s can be treated as singular or plural:

He gave one series/two series of lectures

So too species. With certain other nouns such as barracks, gallows, head-quarters, means, (steel) works, usage varies; they are sometimes treated as variable nouns with zero plurals, sometimes as ‘pluralsia tantum’ (4.34).

4.47 Foreign Plurals
Foreign plurals often occur along with regular plurals. They are commoner in technical usage, whereas the -s plural is more natural in everyday language; thus formulas (general) ~ formulae (in mathematics), antennae (general and in electronics) ~ antennae (in biology). Our aim here will be to survey systematically the main types of foreign plurals that are used in present-day English and to consider the extent to which a particular plural form is obligatory or optional. Most (but by no means all) words having a particular foreign plural originated in the language mentioned in the heading.
4.48 Gender

Nouns in -us (Latin)
The foreign plural is -i, as in stimulis ~ stimuli.

Only regular plural (-uses): bonus, campus, choros, circus, virus, etc
Both plurals: cactus, focus, fungus, nucleus, radius, terminus, syllabus
Only foreign plural: alumnus, bacillus, locus, stimulus

Note
The usual plurals of corpus and genus are corpora, genera.

4.49
Nouns in -a (Latin)
The foreign plural is -ae, as in alumnas ~ alumnatae.

Only regular plural (-a): area, arena, dilemma, diploma, drama, etc
Both plurals: antena, formula, nebula, cortebra
Only foreign plural: alya, almana, lare

4.50
Nouns in -um (Latin)
The foreign plural is -a, as in curricula ~ curricula.

Only regular plural: album, chrysanthemum, museum, etc
Usually regular: forum, stadium, ultimatum
Both plurals: arium, medium, memorandum, symposium
Usually foreign plural: curriculum
Only foreign plural: addendum, bacterium, corrigendum, desideratum,
erratum, ovum, stratum

Note
Media with reference to press and radio and strata with reference to society are sometimes used informally as singular. In the case of data, reclassification as a singular non-count noun is widespread, and the technical singular datum is rather rare.

4.51
Nouns in -ex, -ix (Latin)
The foreign plural is -ices, as in index ~ indices.

Both regular and foreign plurals: apex, index, vortex, appendix, matrix
Only foreign plural: codex

4.52
Nouns in -is (Greek)
The foreign plural is -es, as in bases ~ bases.

Regular plural (-ises): metropolis
Foreign plural: analysis, axis, basis, crisis, diagnosis, ellipsis, hypothesis, oasis, parenthesis, synopsis, thesis

4.53
Nouns in -on (Greek)
The foreign plural is -a, as in criterion ~ criteria.

Only regular plurals: demon, electron, neutron, proton
Chiefly regular: ganglion
Both plurals: automaton
Only foreign plural: criterion, phenomenon

Note
Informally, criteria and phenomena are sometimes used as singulars.

4.54
French nouns
A few nouns in -e(o) are retained the French -x as the spelling of the plural, beside the commoner -s, but the plurals are almost always pronounced as regular, /s/, irrespective of spelling, eg: adieu, bureau, tableau, plateau.

4.55
Some French nouns in -s or -x are pronounced with a final vowel in the singular and with a regular /s/ in the plural, with no spelling change: chamois, chasis, corps, faux pas, patois.

4.56
Nouns in -o (Italian)
The foreign plural is -i as in tempio ~ templi.

Only regular plural: soprano
Usually regular plural: virtuoso, libretto, solo, tempo

Note
Graffiti is usually a 'plurality tantum' (4.34), confetti, spaghetti non-count singular.

4.57
Hebrew nouns
The foreign plural is -im, as in kibbutz ~ kibbutzim.

Usually regular: cherub, seraph
Only foreign plural: kibbutz

Gender

4.58
English makes very few gender distinctions. Where they are made, the connection between the biological category 'sex' and the grammatical category 'gender' is very close, insofar as natural sex distinctions determine English gender distinctions.
It is further typical of English that special suffixes are not generally used to mark gender distinctions. Nor are gender distinctions made in the article. Some pronouns are gender-sensitive (the personal he, she, it, and the relative who, which), but others are not (they, some, these, etc.). The patterns of pronoun substitutions for singular nouns give us a set of ten gender classes as illustrated in Fig 4:2.

![Fig 4:2 Gender classes]

4.59

[A/B] Personal masculine/feminine nouns

These nouns are of two types. Type (i) has no overt marking that suggests morphological correspondence between masculine and feminine, whereas in Type (ii) the two gender forms have a derivational relationship (cf App I.14).

<table>
<thead>
<tr>

</tbody>
</table>

Some masculine/feminine pairs denoting kinship have common (dual) generic terms, for example, parent for father/mother, and child for son/daughter as well as for boy/girl. Some optional feminine forms (poetess, authoress, etc) are now rare, being replaced by the dual gender forms (poet, author, etc).

4.60

[C] Personal dual gender

This is a large class including, for example, the following:

artist   fool   musician   servant
chairman  foreigner  neighbour  speaker
cook     friend    novelist  student
criminal  guest    parent    teacher
doctor   inhabitant  person    writer
eveny    librarian  professor

For clarity, it is sometimes necessary to use a 'gender marker':

boyfriend   girlfriend
man student  woman student

The dual class is on the increase, but the expectation that a given activity is largely male or female dictates the frequent use of sex markers: thus a nurse, but a male nurse; an engineer but a woman engineer.

Note

Where such nouns are used generically, neither gender is relevant though a masculine reference pronoun may be used (cf 7.30):

If any student calls, tell him I'll be back soon.

When they are used with specific reference, they must of course be either masculine or feminine and the context may clearly imply the gender in a given case:

I met a handsome student (and he . . .)
I met a beautiful student (and she . . .).
understood to mean that all these are possible for all nouns in all contexts. A mother is not likely to refer to her baby as *it*, but it would be quite possible for somebody who is not emotionally concerned with the child or is ignorant of or indifferent to its sex. Cf 4.63.

4.62

[E] Collective nouns

These differ from other nouns in taking as pronoun substitutes either singular (*it*) or plural (*they*) without change of number in the noun (*the army* ~ *if they*; *cf the armies* ~ *they*): cf 7.20. Consequently, the verb may be in the plural after a singular noun (though less commonly in AmE than in BrE):

*The committee has met and it has rejected the proposal.*

The difference reflects a difference in attitude: the singular stresses the non-personal collectivity of the group and the plural the personal individuality within the group.

We may distinguish three subclasses of collective nouns:

(a) **specific**: army, clan, class, club, committee, crew, crowd, family, flock, gang, government, group, herd, jury, majority, minority

(b) **generic**: the aristocracy, the bourgeoisie, the clergy, the élite, the gentry, the intelligentsia, the laity, the proletariat, the public

(c) **unique**: the Arab League, (the) Congress, the Kremlin, the Papacy, Parliament, the United Nations, the United States, the Vatican

4.63

[H/G] Higher animals

Gender in higher animals is chiefly observed by people with a special concern (eg with pets).

- *buck*  *doe*  *gander*  *goose*
- *bull*  *cow*  *lion*  *lioness*
- *cock*  *hen*  *stallion*  *mare*
- *dog*  *bitch*  *tiger*  *tigress*

A further class might be set up, "common higher animals", patterning with *which* − *it*, (*who* − *he/she*), to account for *horse, cat, tiger, etc*, when no sex distinction is made or known. In such cases, *he* is more usual than *she*.

4.64

[H] Higher organisms

Names of countries have different gender depending on their use. (i) As geographical units they are treated as [J], inanimate: "Looking at the map we see France here. It is one of the largest countries of Europe." (ii) As political/economic units the names of countries are often feminine, [H] or [G]: "France has been able to increase her exports by 10 per cent over the last six months." 'England is proud of her poets.' (iii) Esp. in BrE, sports teams representing countries can be referred to as personal collective nouns, [E]: "France have improved their chance of winning the cup."

The gender class [H] is set up to embrace these characteristics, and in it we may place ships and other entities towards which an affectionate attitude is expressed by a personal substitute:

What a lovely ship. *What is she called?*

The proud owner of a sports car may refer to it as *she* (or perhaps as *he* if the owner is female).

4.65

[I/J] Lower animals and inanimate nouns

Lower animals do not differ from inanimate nouns in terms of our present linguistic criteria; *ie both snake and box have which ar 1 it ar pronouns. Sex differences can, however, be indicated by a range of gender markers for any animate noun when they are felt to be relevant: eg: *she-goat, he-goat, male frog, hen-pheasant.*

**Case**

4.66

Common/genitive case

As distinct from personal pronouns (4.79), English nouns have a two-case system: the unmarked **common case** (*boy*) and the marked **genitive case** (*boy's*). Since the functions of the common case can be seen only in the syntactic relations of the noun phrase (subject, object, etc), it is the functions of the genitive that need separate scrutiny.

The forms of the genitive inflection

4.67

The *-s* genitive of regular nouns is realized in speech only in the singular, where it takes one of the forms *’z/, /’z/, /’z/, following the rules for *s* inflection (3.5). In writing, the inflection of regular nouns is realized in the singular by -*’s* and in the plural by putting an apostrophe after the plural *s*.

As a result, the spoken form */spatz/ may be related to the noun *spy* as follows:
The spies were arrested
The spy's companion was a woman
The spies' companions were women in each case

(It could of course also be the s form of the verb as in 'He spy's c/o behalf of
an industrial firm'.) By contrast, an irregular noun like man preserves a
number distinction independently of genitive singular and genitive plural
distinctions: man, men, man's, men's.

Note
In postmodified noun phrases, there can be a difference between the genitive and
plural because of the different location of the inflection (4.74):

The palace was the King of Denmark's
They praised the Kings of Denmark

4.68
In addition to its use with regular plurals, the 'zero' genitive occurs

(a) with Greek names of more than one syllable, as in Euripides' /-diz/ plays;
(b) with many other names ending in /sz/ where, in speech, zero is a vari-
ant of the regular /tz/ genitive. There is vocalisation both in the pro-
nunciation and spelling of these names, but most commonly the
pronunciation is the /tz/ form and the spelling an apostrophe only.
Thus Burns' (or, less commonly, Burns's), is pronounced, irrespec-
tive of the spelling, /bizz/ (or /z/);
(c) with fixed expressions of the form for ... sake as in for goodness'
sake /s/, for conscience' sake /s/.

4.69
Two genitives
In many instances there is a functional similarity (indeed, semantic ident-
ity) between a noun in the genitive case and the same noun as head of a
prepositional phrase with of. We refer to the -s genitive for the infec-
tion and to the of-genitive for the prepositional form. For example:

What is the ship's name?
What is the name of the ship?

Although as we shall see (4.71f) there are usually compelling reasons for
preferring one or other construction in a given case, and numerous en-
vironments in which only one construction is grammatically acceptable,
the degree of similarity and overlap has led grammarians to regard the
two constructions as variant forms of the genitive.
4.71 Choice of the of-genitive

The choice of genitives

The semantic classification in 4.70 is in part arbitrary. For example, we could claim that cow's milk is not a genitive of origin but a descriptive genitive ('the kind of milk obtained from a cow') or even a subjective genitive ('the cow provided the milk'). For this reason, meanings and sentential analogues can provide only inconclusive help in choosing between -s and of-genitive use.

The choice can be more securely related to the gender classes represented by the noun which is to be genitive. Generally speaking, the -s genitive is favoured by the classes that are highest on the gender scale (see Fig 4.2), i.e. animate nouns, in particular persons and animals with personal gender characteristics. Although we can say either the youngest children's toys or the toys of the youngest children, the two forms of the genitive are not normally in free variation. We cannot say, for example, *the door's knob or *the hat of John.

Relating this fact to 4.70, we may infer that the possessive use is especially associated with the -s genitive and that this is because we think of 'possession' chiefly in terms of our own species. It is possible to see the partitive genitive at the opposite pole on comparable grounds: the disallowance of the -s genitive matches the irrelevance of the gender of a noun which is merely being measured or dissected.

A further factor influencing the choice of genitive is information focus, the -s genitive enabling us to give end-focus to one noun, the of-genitive to another (cf. 14.2). Compare the following:

(a) The explosion damaged the ship's funnel
(b) Having looked at all the funnels, he considered that the most handsome was the funnel of the Orion

This principle is congruent again with the preference for the of-genitive with partitives and appositives where an -s genitive would result in undesirable or absurd final prominence: *the problem's part.

Note

The relevance of gender is shown also in the fact that the indefinite pronouns with personal reference (4.58) admit the -s genitive while those with non-personal reference do not: someone's shadow, *something's shadow.

4.72 Choice of -s genitive

The following four animate noun classes normally take the -s genitive:

(a) PERSONAL NAMES: Sagovia's pupil
George Washington's statue

(b) PERSONAL NOUNS: the boy's new shirt
my sister-in-law's pencil
(c) COLLECTIVE NOUNS: the government's conviction
the nation's social security
(d) HIGHER ANIMALS: the horse's tail
the lion's hunger

The inflected genitive is also used with certain kinds of inanimate nouns:

(e) GEOGRAPHICAL AND INSTITUTIONAL NAMES:

Europe's future
Maryland's Democratic Senator
London's water supply

(f) TEMPORAL NOUNS:

a moment's thought
the theatre season's first big event

(g) NOUNS OF SPECIAL INTEREST TO HUMAN ACTIVITY:

the brain's total solid weight
the mind's general development

the game's history

science's influence

4.73 Choice of the of-genitive

The of-genitive is chiefly used with nouns that belong to the bottom part of the gender scale (4.58), that is, especially with inanimate nouns: the title of the book, the interior of the room. In these two examples, an -s genitive would be fully acceptable, but in many instances this is not so: the hub of the wheel, the windows of the houses. Related no doubt to the point made about information focus (4.71), however, the corresponding personal pronouns would normally have the inflected genitive: its hub, their windows.

In measure, partitive, and appositive expressions, the of-genitive is the usual form except for temporal measure (a month's rest) and in idioms such as his money's worth, at arm's length. Cf 4.70 Note.

Again, where the of-genitive would normally be used, instances are found with the inflected form in newspaper headlines, perhaps for reasons of space economy:

FIRE AT UCLA: INSTITUTE'S ROOF DAMAGED

where the subsequent news item might begin: 'The roof of a science institute on the campus was damaged last night as fire swept through . . .'
4.77 Double genitive

With the of-genitive in comparable environments, a pronoun is normally necessary:

The population of New York is greater than that of Chicago

4.76

Ellipsis is especially noteworthy in expressions relating to premises or establishments:

I shall be at Bill’s

Here Bill’s would normally mean ‘where Bill lives’, even though the hearer might not know whether the appropriate head would be house, apartment, flat, digs (BrE); ‘lives’ is important, however, and hotel room (where Bill could only be ‘staying’) would be excluded. By contrast

I shall be at the dentist’s

would refer to the dentist’s professional establishment and the same applies to proper names where these refer to commercial firms. It would not be absurd to write:

I shall be at Harrod’s/ Foyle’s/Macy’s

This usage is normal also in relation to small ‘one-man’ businesses: I buy my meat at Johnson’s.

With large businesses, however, their complexity and in some sense ‘plurality’ cause interpretation of the -s ending as the plural inflection, and the genitive meaning – if it survives – is expressed in writing by moving the apostrophe (at Macy’s). On the other hand, conflict between plurality and the idea of a business as a collective unity results in vacillation in concord:

Harrods is/are very good for clothes

4.77 Double genitive

An of-genitive can be combined with an -s genitive in a construction called the ‘double genitive’. The noun with the -s genitive inflection must be both definite and personal:

An opera of Verdi’s

but not:

*A sonata of a violinist’s

*A funnel of the ship’s
There are conditions which also affect the noun preceding the of-phrase. This cannot be a proper noun; thus while we have:

Mrs Brown's Mary
we cannot have:

*Mary of Mrs Brown  *Mary of Mrs Brown's

Further, this noun must have indefinite reference: that is, it must be seen as one of an unspecified number of items attributed to the postmodifier:

A friend of the doctor's has arrived
*The daughter of Mrs Brown's has arrived
A daughter of Mrs Brown's has arrived
Any daughter of Mrs Brown's is welcome
*The War Requiem of Britten's

The double genitive thus involves a partitive (4.70) as one of its components: "one of the doctor's friends" (he has more than one) and hence not "one of Britten's War Requiem". Yet we are able, in apparent defiance of: "his stated" to use demonstratives as follows:

That wife of mine  This War Requiem of Britten's

In these instances, which always presuppose familiarity, the demonstratives are not being used in a directly defining role; rather, one might think of them as having an ellided generic which allows us to see wife and War Requiem appositively as members of a class of objects: "This instance of Britten's works, namely, War Requiem".

Note
So too when 'A daughter of Mrs Brown's' is already established in the linguistic context, we could refer to 'The/That daughter of Mrs Brown's (that I mentioned)'.

Pronouns
4.78
Pronouns constitute a heterogeneous class of items (see Fig 4:3) with numerous subclasses. Despite their variety, there are several features that pronouns (or major subclasses of pronouns) have in common, which distinguish them from nouns:

1. They do not admit determiners (but of 4.96);
2. They often have an objective case: 4.79;
3. They often have person distinction: 4.80;
4. They often have overt gender contrast: 4.21;
5. Singular and plural forms are often not morphologically related.

4.80 Person
We can broadly distinguish between items with specific reference (4.83–90) and those with more indefinite reference (4.91–97).

Fig 4:3 Pronouns

Note
Many of the items dealt with here have an alternative (this, which) or exclusive (my, her) determiner function. The interrelations make it convenient, however, to bring them together.

4.79 Case
Like nouns, most pronouns in English have only two cases: common (somebody) and genitive (somebody's). But six pronouns have an objective case, thus presenting a three-case system, where common case is replaced by subjective and objective. There is identity between genitive and objective her, and partial overlap between subjective who and objective who (see 4.88). The genitives of personal pronouns are, in accordance with grammatical tradition and a primary meaning (4.70), called 'possessive pronouns'.

subjective I we me
objective we us who
genitive my our his her whose

There is no inflected or -s genitive with the demonstratives or with the indefinites except those in -one, -body.

4.80 Person
Personal, possessive, and reflexive pronouns (Table 4:1) have distinctions of person:
1st person refers to the speaker (I), or to the speaker and one or more others (we);  
2nd person refers to the person(s) addressed (you);  
3rd person refers to one or more other persons or things (he/she/it, they).

Table 4:1

</tr>
</tbody>
</table>

Note  
Both 2nd person you and 3rd person they have an indefinite usage: 4.96 and Note.

4.81  
Gender  
In 3rd person singular, the personal, reflexive, and possessive pronouns distinguish in gender between masculine (he/him/himself/his), feminine (she/her/herself/hers), and non-personal (it/itself/its). Relative and interrogative pronouns and determiners distinguish between personal and non-personal gender: see 4.89.

4.82  
Number  
The 2nd person uses a common form for singular and plural in the personal and possessive series but has a separate plural in the reflexive (yourself, yourselves). We, the 1st person plural pronoun, does not denote 'more than 1' (cf: the boy—the boys) but '1 plus one or more others'. There is thus an interrelation between number and person. We may exclude the person(s) addressed:

4.84  
Reflexive pronouns  
Are we [John and I] late, Mary? (ie 3rd + 1st)  
('Yes, you are')
or it may be inclusive:  
Are we [you and I] late, Mary? (ie 2nd + 1st)  
('Yes, we are')  
Are we [you, John, and I] late, Mary? (ie 2nd + 3rd + 1st)

See further 4.84.

Note  
In several dialects, and fairly generally in familiar AmE, there are devices for indicating plural you: you all (Sthn AmE), you guys, etc.

4.83  
Personal pronouns  
The relation of personal to reflexive and possessive pronouns is shown in Table 4:1. Personal pronouns function as replacements for co-referential noun phrases in neighbouring (usually preceding) clauses:

John waited a while but eventually he went home  
John told Mary that she should wait for him  
When John arrived, he went straight to the bank

When a subordinate clause precedces the main as in this last example, the pronoun may anticipate its determining co-referent:  
When he arrived, John went straight to the bank

The personal pronouns have two sets of case-forms. The subjective forms are used as objects of finite verbs and often as subject complements:

He hoped the passenger would be Mary and indeed it was she

The objective forms are used as objects, and as prepositional complements. Especially in informal usage, they also occur as subject complements and as the subject (chiefly 1st person) of sentences whose predicates have been ellipsed:

I saw her with them, at least, I thought it was her

α: Who broke the vase? β: Me.

Reflexive pronouns  
4.85  
Reflexive pronouns replace a co-referential noun phrase, normally within the same finite verb clause:

John has hurt himself  
Mary intended to remind herself  
The rabbit tore itself free
Nouns, pronouns, and the basic noun phrase

4.85

Mary told John that she would look after

\[ \begin{align*}
  & \text{herself} \\
  & \text{him} \\
  & \text{himself}
\end{align*} \]

When a mixture of persons is involved, the reflexive conforms to a 1st person or, if there is no 1st person, to a 2nd person:

You, John and I mustn't deceive ourselves
You and John mustn't deceive yourselves

The indefinite one (4.96) has its own reflexive as in 'One mustn't fool oneself', but other indefinites use himself or themselves:

No one must fool himself

4.86

In prepositional phrases expressing spatial relationship, usually between concretes, the personal pronouns are used despite co-reference with the subject:

He looked about him
Have you any money on you?
She had her fiancée beside her
They placed their papers in front of them

But reflexive pronouns are often preferred when the reference is metaphorical and emotive; in the following example, the reflexive is obligatory:

She was beside herself with rage

There are however non-metaphorical examples in which there is considerable vacillation:

She felt within her(self) the stirring limbs of the unborn child
Holding a yellow bathrobe around her(self), she walked up to him

In variation with personal pronouns, reflexives often occur after as, like, but, except, and in coordinated phrases:

For somebody like \{me, myself\} this is a big surprise
My brother and \{I, myself\} went sailing yesterday

In a related but emphatic usage, reflexives occur in apposition, with positional mobility:

I've never been there myself
I myself have never been there
I have never myself been there

4.87 Possessive pronouns

4.86 Reciprocal pronouns

We can bring together two sentences such as

John likes Mary
Mary likes John

with a reciprocal structure somewhat similar to a reflexive:

John and Mary like \{each other, one another\}

In this example, with two antecedents, each other would be commoner, but where more than two are involved, one another is often preferred:

The four children are fond of one another
He put all the books beside one another

The reciprocal pronouns can be freely used in the genitive:

The students borrowed each other's notes.

4.87 Possessive pronouns

The possessive pronouns combine genitive functions (as described for nouns with the -s genitive, 4.70 ff) with pronominal functions. In the latter respect, the co-referential item they replace may be in the same clause (as with reflexives) or a neighbouring one (as with the personal pronouns):

John has cut his finger; apparently there was a broken glass on his desk.

The possessives belong to two series: the attributives (my, your, etc, which are syntactically determiners: 4.5) and the nominals (mine, yours etc, which are used like the genitive with ellipsis: 4.75). Compare

Mary's book
Her book

The book is Mary's
Her book

Unlike many other languages, English uses possessives with reference to parts of the body and personal belongings, as well as in several other expressions:

He stood at the door with his hat in his hand
Mary has broken her leg
Don't lose your balance!
They have changed their minds again!

The definite article is, however, usual in prepositional phrases related to the object, or, in passive constructions, the subject:

She took me by the hand
Somebody must have hit me on the head with a hammer
I must have been hit on the head with a hammer.
4.88 **Relative pronouns**
The functions and interrelations of the relative pronouns are best handled in connection with relative clauses (13.8f) and nominal relative clauses (1.16). Here we need only tabulate an inventory of the items, none of which shows number distinction.

(a) The **wh**-series reflects the gender (personal/non-personal) of the antecedent:

- **Personal:** who, whom, whose
- **Non-personal:** which, whose

There is an inflected genitive (used as a relative determiner: *the man whose daughter*) for both who and which, but there is a preference for the of-genitive (of which) with non-personal antecedents. The personal objective whom is often replaced by who but never when preceded by a preposition. For nominal relative clauses, there is the personal whoever and the non-personal pronoun and determiner which(ever); in addition there is a nominal relative pronoun and determiner what(ever): *What(ever) (money) I have you can borrow*.

(b) **That** is a general purpose relative pronoun, used irrespective of gender or case except that the genitive must involve postposed of: *the knife that I broke the blade of* (informal).

(c) Zero is used identically to that except that it is unacceptable where the relative pronoun is subject in its clause:

- The pen **I want** is missing
- *The pen writes best** is missing

4.89 **Interrogative pronouns**
The interrogatives are identical in form and in case relations with the relative pronouns, but in addition to the basic difference between interrogative and relative there are functional differences in detail.

(a) **Interrogative determiners**

- **Personal:** whose
- **Personal or non-personal:** which, what

(b) **Interrogative pronouns**

- **Personal:** who, whom, whose
- **Non-personal:** what
- **Personal or non-personal:** which

Whether as pronouns or determiners, *which* and *what* have a constant relationship to each other with respect to definiteness (4.20); *what* has indefinite reference and *which* has definite reference:

4.90 **Demonstrative pronouns**
The demonstratives have number contrast and can function both as determiners and pronouns. The general meanings of the two sets can be stated as *near* and *distant* reference:

- **Singular**
  - *near* reference: this
  - *distant* reference: that

- **Plural**
  - *near* reference: these
  - *distant* reference: those

In this respect, they match the pairs her/their, now/then, and, as with these, the relative immediacy and relative remoteness operate both literally and metaphorically:

- I like *these* (pictures, which are near me) better than *those* (pictures, over there on the far side)
- I like *this* (idea that you've just mentioned) better than *that* (other one that you wrote to me about last year)
- I will tell you *this* secret (forward or cataphoric reference) because you kept *that* other one (back or anaphoric reference) so faithfully

By further metaphorical extension, we have *this/these* used to connote interest and familiarity in informal style ("Then I saw, away in the distance, this lovely girl, and . . ."). There can be a corresponding emotive rejection implied in *that/those* ("Here is *that* awful Jones and *those* children of his").

As subject, pronouns may have personal or non-personal reference:

- This/That *girl* is Mary
- This/That *pen* is mine

In other than subject function, pronoun reference is non-personal:

- He is going to marry *this* girl
- I bought *this* picture

"This"
4.92 Partitive pronouns

As well as their use with plurals and non-count nouns (4.5), the determiners some and any can be used with singular count nouns when they are stressed. Some is frequently followed by or other:

Any apology will satisfy them

There was some book (or other) published on the subject last year

Note
[a] In familiar style, the stressed some means 'extraordinary':

That's 'some rest you have there!
[b] We should note the partitive place compounds as in He went somewhere, Did he go anywhere?, He went nowhere.

4.91 Universal pronouns and determiners

The universal pronouns and determiners comprise each, all, every, and the every compounds. Two have -s genitives: everyone's, everybody's. Despite their singular form, the compounds have collective reference, and along with every they entail reference to a number of three or (usually) more. Each entails reference to two or more, and has individual reference. Thus:

There were two boys who called and I gave an apple to each
| everybody |
| | |
| There were seven boys who called and I gave an apple to each
| everybody |
| | |
| There is, however, a meaning difference between each and everybody. Each refers to individuals already specified, whereas everybody does not:
| |
| I walked into the room and gave an apple to each everybody |
| |
| Every one, each (one), and all have of-constructions; and except all, these pronouns can have a singular or plural pronoun for co-reference:
| Everyone |
| Each |
| Each one |
| |
| of the students should have their own books |
| |
| of the students should have his own books |
| |
| Every can also be used with plural expressions such as every two weeks, every few months, and there is a universal place compound everywhere as in Everywhere looks beautiful in the spring.

Note
| it all can also be used in reference to non-personal divisible count nouns: |
| I have started the book but I haven't read it all |
| |

4.92 Partitive pronouns

Parallel to the universal pronouns, we have three sets of partitive pronouns with associated determiners: see Table 4:2. Their use can be illustrated as follows:

He saw something/some material
Did he see anything/any material?
He saw nothing/no material
4.93

Non-assertive usage
The contexts which require the any series or 'non-assertive' forms (cf. 7.35) chiefly involve
(a) the negatives nor, never, no, neither, nor;
(b) the 'incomplete negatives' hardly, little, few, least, seldom, etc.;
(c) the 'implied negatives' before, fail, prevent, reluctant, hard, difficult, etc.; and comparisons with too;
(d) questions and conditions.

Although the main markers of non-assertion are negative, interrogative, and conditional clauses, it is the basic meaning of the whole sentence which ultimately determines the choice of the some or the any series. For example, in the sentence

Freud contributed more than anyone to the understanding of dreams

the use of the non-assertive anyone is related to the fact that the basic meaning is negative, as appears in the paraphrase

Nobody contributed more to the understanding of dreams than Freud

Conversely, some is often used in negative, interrogative, or conditional sentences, when the basic meaning is assertive ('positive orientation', see 7.46):

Did somebody telephone last night?

The difference between these last two can be explained in terms of different presuppositions: somebody suggests that the speaker expected a telephone call, whereas anybody does not. In making an invitation or an offer, it is for the same reason polite to presuppose an acceptance:

Would you like some wine?

Note
The following examples further illustrate the use of the some series in superficially non-assertive contexts:

If someone were to drop a match here, the house would be on fire in two minutes

But what if somebody decides to break the rules?

Will somebody please open the door?

Why don't you do something else?

Conversely, the any series is used with stress (cf. 4.92) in superficially assertive sentences with the special meaning of 'no matter who, no matter what':

He will eat anything

4.96

Numerals

Anyone interested in addressing the meeting should let us know

Any offer would be better than this

You must marry someone — and you mustn't marry just anyone

4.94

Either, neither, and the negatives

Among the partitive pronouns, the relationship between either, neither, and none is similar to that between each, every, and none among the universal pronouns. Both as pronouns and as determiners, either and neither have in fact a strictly dual reference. Compare:

None (of the many students)

Neither (of the [two] students)

Neither (student)

Either (of the [two] students)

(1) may fail the exam:

4.95

Quantifiers

The general quantifiers used predominantly are (a) the 'multal' many and much, (b) the 'paucal' few and little, and (c) several and enough. Their use in respect to count and non-count reference matches the position outlined in connection with their determiner function: 4.13.

Numerals

4.96

The uses of one

(a) NUMERICAL ONE when used with animate and inanimate singular count nouns is a stressed variant of the indefinite article a(n). It is in contrast with the dual two and both and the plural numerals three, four, etc.; several, and indefinite some. It has similar contrasts when used pronominally:

I need a nail ~ I need some nails

one ~ some

(Th(е) one) boy/pen ~ One of the boys/pens

A

(Th(е) one) is also in contrast with the other in the correlative construction:

One went this way, the other that way

Note that there is a somewhat formal or old-fashioned use of one meaning 'a certain' before personal proper names:

I remember one Charlie Brown at school
(b) **Replacive one** is used as an anaphoric substitute for a singular or plural count noun. It has the singular form *one* and the plural *ones*. Replacive *one* can take determiners and modifiers (though not usually possessives or plural demonstratives):

A. I am looking for a particular book on syntax.
B. Is this the one you mean? (= Is this it?)
A. Yes, I'd like a drink, but just a small one.
B. I thought you preferred large ones.

It is modified by the -s genitive in preference to the of-genitive, in sharp contrast to the demonstratives which can take only the of-genitive; compare:

I prefer John’s car to [his employer’s one]
[that of his employer]

(c) **Indefinite one** means ‘people in general’, implying inclusion of the speaker. This use of *one* is chiefly formal and is often replaced by the more informal *you*:

One would\(\) say they would run a lat\(\)e bus; then that!

You’d\(\) think they would run a later bus; then that!

Indefinite *one* has the genitive *one’s* and the reflexive *oneself*. In AmE, repetition of co-referential *one* is characteristically formal, *he* or (informally) *you* being preferred instead:

One can’t be too careful, can [one]?
[you?]

Note
The corresponding indefinite which implies exclusion of the speaker is *they*: ‘They say (= it is said) that they (= some relevant unspecified people) are going to dig up our street next month.’

Bibliographical note
For theoretical discussion of nouns and noun phrases, see Serensen (1958); Bach (1968). On reference and the articles, see Christophersen (1939); Robbins (1968). On relevant transformational studies, see Stockwell et al (1973), Ch 3, 4, 11.

### 4.97 Cardinals and ordinals

The system of cardinal (*one, two, etc*) and ordinal (*first, second, etc*) numerals will be clear from the following list. Both types can function pronominally or as premodifiers, except that *nought* occurs chiefly as the name of the numeral, being replaced by the determiner *no* or the pronoun *none* in general use. With *hundred, thousand, million*, the indefinite article often replaces *one*. Pronominally, the ordinals are preceded by an article (*Today is the fourth of July*) and resemble superlatives with ellipted heads: cf 5.8.
Characteristics of the adjective
5.1
We cannot tell whether a word is an adjective by looking at it in isolation: the form does not necessarily indicate its syntactic function. Some suffixes are indeed found only with adjectives, eg: -ous (App I.20), but many common adjectives have no identifying shape, eg: good, hot, little, young, fat. Nor can we identify a word as an adjective merely by considering what inflections or affixes it will allow. It is true that many adjectives infect for the comparative and superlative, eg: greater, greatest. But many do not allow inflected forms, eg: disastrous, disastrous, disastrouset (5.36). Moreover, a few adverbs can be similarly infected, eg: (He worked) hard, harder, hardest (5.38). It is also true that many adjectives provide the base from which adverbs are derived by means of an -ly suffix, eg: adjective happy, adverb happily (App I.22). Nevertheless, some do not allow this derivational process; for example, there is no adverb *oldly derived from the adjective old. And there are a few adjectives that are themselves derived from an adjective base in this way, eg: kindly, an item functioning also as an adverb.

5.2
Most adjectives can be both attributive and predicative (5.3), but some are either attributive only (5.13f) or predicative only (5.18).

Two other features usually apply to adjectives:

(1) Most can be premodified by the intensifier very, eg: The children are very happy.

(2) Most can take comparative and superlative forms. The comparison may be by means of inflections, eg: The children are happier now, They are the happiest people I know, or by the addition of the premodifiers more and most (periphrastic comparison) eg: These students are more intelligent, They are the most beautiful paintings I have ever seen.

Syntactic functions of adjectives
5.3
Attributive and predicative
The major syntactic functions of adjectives are attributive and predicative.

Adjectives are attributive when they premodify nouns, ie: appear between the determiner (4.5) and the head of the noun phrase:

- the beautiful painting
- his main argument

Predicative adjectives can be

(a) subject complement:
- Your daughter is pretty

(b) object complement:
- He made his wife happy

They can be complement to a subject which is a finite clause (11.3):

- Whether he will resign is uncertain

or a non-finite clause (11.3):

- Driving a bus isn’t easy

Similarly, adjectives can be object complement to clauses:

- I consider {what he did} foolish

The adjective functioning as object complement often expresses the result of the process denoted by the verb (7.9):

- He pulled his belt tight (As a result, his belt was then tight)
- He pushed the window open (As a result, the window was then open)
Postpositive 5.4 Adjectives can sometimes be postpositive, i.e., they can sometimes follow the item they modify. A postposed adjective (together with any complementation it may have) can usually be regarded as a reduced relative clause.

Indefinite pronouns ending in -body, -one, -thing, -where can be modified only postpositively:

I want to try on something larger (i.e., "which is larger")

Postposition is obligatory for a few adjectives, which have a different sense when they occur attributively or predicatively. The most common are probably elect ("soon to take office") and proper ("as strictly defined"), as in:

the president elect the City of London proper

In several compounds (mostly legal or quasi-legal) the adjective is postposed, the most common being: attorney general, body politic, court martial, heir apparent, notary public (AmE), postmaster general.

Postposition (in preference to attributive) position is usual for a few a-adjectives (5.42) and for absent, present, and (esp BrE) concerned, involved, which normally do not occur attributively in the relevant sense:

The house ablaze is next door to mine
The people involved were not found

Some postposed adjectives, especially those ending in -able or -ible, retain the basic meaning they have in an attributive position but convey the implication that what they are denoting has only a temporary application (13.4). Thus, the stars visible refers to stars that are visible at a time specified or implied, while the visible stars refers to a category of stars that can (at appropriate times) be seen.

5.5 If an adjective is alone or premodified merely by an intensifier, postposition is normally not allowed:

The (rather) timid soldiers approached their officer
*The soldiers (rather) timid

However, if the noun phrase is generic and indefinite, coordinated adjectives or adjectives with a clause element added can be postposed, though such constructions are not very frequent:

Soldiers timid or cowardly don't fight well
A man usually honest will sometimes cheat

5.6 Head of a noun phrase

More commonly, we find:

Timid or cowardly soldiers
Soldiers who are timid or cowardly

A man who is usually honest will sometimes cheat

It is unacceptable to prepose the whole of an adjective phrase in which there is complementation of the adjective:

*The easiest to teach boys were in my class

Postposition is normally possible:

The boys easiest to teach were in my class
They have a house much larger than yours
Students brave enough to attempt the course deserve to pass

though it is more usual to prepose the adjective (and its premodifiers, if any) and postpose the complementation:

The easiest boys to teach were in my class
They have a much larger house than yours

But if the adjective is modified by enough, too, or so, the modified adjective normally cannot be separated from its complementation:

Brazen enough students to attempt the course deserve to pass
*A brave enough student to attempt the course deserves to pass
*Too/So easy boys to teach were in my class
*A too/so easy boy to teach was in my class

Note

[a] An adjective modified by enough, too, or so can be separated from its complementation if the modified adjective is positioned before the indefinite article of the noun phrase:

He is (not) brave enough a student to attempt the course
He thought him too difficult a boy to teach

But with enough and too, this construction seems to be possible only if the adjective phrase is part of the subject complement or object complement, and with enough it is more common if the adjective is premodified by not. With so, the construction is also possible if the adjective phrase is part of the subject or object:

So easy a boy to teach deserves to pass
I have never met so difficult a man to please

[b] Aptly (AmE) and galore (both informal) are postposed obligatorily, e.g.: There were plenty of tables galore.

Head of a noun phrase 5.6 Adjectives can often function as heads of noun phrases. As such, they do not inflect for number or for the genitive case and must take a definite determiner. Most commonly, such adjectives have personal reference:
Adjectives and adverbs 5.7

6.9 Verbless adjective clause

The latest (i.e. the latest news, thing') is that he is going to run for election
The very best (i.e. the very best part, thing') is yet to come
He ventured into the unknown
He went from the sublime to the extremely ridiculous

Note
There are a number of set phrases in which such an adjective is complement of a preposition, e.g.: (He left) for good, (He enjoyed it) to the full, in short.

Verbless adjective clause 5.9

An adjective (alone or as head of an adjective phrase) can function as a verbless clause. The clause is mobile, though it usually precedes or follows the subject of the superordinate clause:

(by then) nervous, the man opened the letter
The man, (by then) nervous, opened the letter
The man opened the letter, (by then) nervous

The implied subject is usually the subject of the sentence. Thus, while we have

The man restrained the woman, who was aggressive

we do not have as its equivalent

*The man restrained the woman, aggressive

However, if the clause contains additional clause constituents, its implied subject can be other than the subject of the sentence:

She glanced with disgust at the cat, quiet (now) in her daughter's lap

Other examples of verbless adjective clauses:

Long and untidy, his hair played in the breeze
Anxious for a quick decision, the chairman called for a vote

The implied subject of the adjective clause can be the whole of the superordinate clause. For example,

Strange, it was she who initiated divorce proceedings

is semantically equivalent to: That it was she who initiated divorce proceedings is strange.

An adverb may sometimes replace, with little difference in meaning, an adjective functioning as a verbless clause:

Nervously, the man opened the letter
Nervous, the man opened the letter

5.7 Some adjectives denoting nationalities can be noun-phrase heads:

You British and you French ought to be allies
The industrious Dutch are admired by their neighbours

The adjectives in question are virtually restricted to words ending in -(i)sh (e.g. British, Spanish), -ch (Dutch, French) and -ese (e.g. Chinese, Japanese), and the adjective Swiss. As with the previous type, these noun phrases have generic reference and take plural concord, but they cannot be modified by adverbs. They can be modified by adjectives, which are normally non-restrictive, i.e. the industrious Dutch is interpreted as 'the Dutch, who are industrious, . . . .' (13.3).

Note
[a] Postmodifying prepositional phrases and relative clauses can be either restrictive or non-restrictive:

The Irish (who live) in America retain sentimental links with Ireland
The Polish, who are very rebellious, resisted strongly

[b] These adjectives are sometimes used not to refer to the nation as a whole but to some part of it; for example, troops:

The British have control of the bridge

5.8 Some adjectives can function as noun-phrase heads when they have abstract reference. These take singular concord. A few are modifiable by adverbs. They include, in particular, superlatives:

The extremely old need a great deal of attention
We will nurse your sick and feed your hungry
The young in spirit enjoy life
The rich will help only the humble poor
The wise look to the wiser for advice
The old who resist change can expect violence

These adjectives have generic and plural reference. It is often possible to add a general word for human beings such as people and retain the generic reference (in which case the definite determiner is normally omitted) but the use of the adjective as head of the noun phrase is probably more common. The adjective can itself be modified, usually by restrictive modification (13.3).
5.14 Intensifying adjectives

Syntactic subclassification of adjectives

5.12 Adjectives can be subclassified according to whether they can function as:

1. both attributive and predicative, eg: a hungry man ~ the man is hungry; these are the majority and constitute the central adjectives
2. attributive only, eg: an utter fool ~ the fool is utter
3. predicative only, eg: *a loath woman ~ the woman is loath to admit it

The restrictions of adjectives to attributive or predicative use are not always absolute, and sometimes vary with individual speakers.

Attributive only

5.13 In general, adjectives that are restricted to attributive position or that occur predominantly in attributive position do not characterize the referent of the noun directly. For example, an old friend (‘one who has been a friend for a long period of time’) does not necessarily imply that the person is old, so that we cannot relate my old friend to my friend is old. Old refers to the friendship and does not characterize the person. In that use, old is attributive only. On the other hand, in that old man, old is a central adjective (the opposite of young) and we can relate that old man to that man is old.

Adjectives that characterize the referent of the noun directly are termed inherent, those that do not are termed non-inherent.

Some non-inherent adjectives occur also predicatively. For example, both a new student and a new friend are non-inherent, though the former can be used predicatively:

That student is new
*My friend is new

Note
A few words with strongly emotive value are restricted to attributive position, eg: you poor man, my dear lady, that wretched woman.

5.14 Intensifying adjectives

Some adjectives have a heightening or lowering effect on the noun they modify. Two semantic subclasses of intensifying adjectives can be distinguished for our present purpose (cf 8.12): emasifiers and amplifiers. Emasifiers have a general heightening effect: amplifiers scale upwards from an assumed norm, denoting the upper extreme of the scale or a high point on the scale.
Emphasizers are attributive only. Examples include:

- a certain ("sure") winner
- pure ("sheer") fabrication
- an outright lie
- a real ("undoubted") hero

Amplifiers are central adjectives when they are inherent:

- a complete victory ~ the victory was complete
- their extreme condemnation ~ their condemnation was extreme
- his great folly ~ his folly was great

But when they are non-inherent, they are attributive only:

- a complete fool ~ *the fool is complete
- a perfect idiot ~ *the idiot is perfect

Other examples of amplifiers that are attributive only:

- a close friend
- utter folly
- a strong opponent
- his entire salary
- the very end
- a great supporter

Several intensifiers have homonyms that are central adjectives, eg:

- Those are real flowers ~ Those flowers are real ("not artificial")

Note
[a] Certain intensifying adjectives are always attributive only, in particular mere, sheer, utter.
[b] Many adjectives can be used as intensifiers, usually with restrictions on the nouns they modify, eg: a great/big fool ("very foolish"); a great/big baby ("very babyish"); a great friend, but not a big friend ("very friendly"). These are also restricted to attributive position.

5.15 LIMITER ADJECTIVES

Limiter adjectives particularize the reference of the noun (cf 8.8). Examples include:

- the main reason
- the only occasion
- the precise reason
- the same student

Some of these have homonyms. For example, certain in a certain person is a limiter ("a particular person"); while in a certain winner it is an intensifier ("a sure winner"). In John is certain that he will win, it is semantically related to the intensifier, but it is equivalent to sure in the sense of "confident" and is limited to predicative position.

Note
Notice the use of very as a limiter adjective in You are the very man I want.

5.16 RELATED TO ADVERBIALS

Other adjectives that are attributive only can be related to adverbials. These non-inherent adjectives include:

- my former friend ~ formerly my friend
- an occasional visitor ~ occasionally a visitor

Some require implications additional to the adverbial:

- the late president ~ till lately the president (now dead)

If the adjectives premodify agentive nouns, the latter suggest as well a relationship to the verb base:

- a hard worker ~ a worker who works hard
- a big eater ~ someone who eats a great deal

There are also instances where the noun normally lacks a corresponding verb but where the adjective (not always attributive) refers to the process part of the noun's meaning:

- an excellent pianist ~ a pianist who plays the piano excellently

The implied process can be associated with an inanimate object:

- a fast car ~ a car that one drives fast
- a fast road ~ a road on which one can drive fast

Some of these adjectives have a temporal meaning. We might include with them acting ("for the time being") as in the acting chairman.

5.17 DENOMINAL ADJECTIVES

Some adjectives derived from nouns (5.20 (h)) are attributive only, eg:

- criminal law ~ law concerning crime
- an atomic scientist ~ a scientist specializing in atomic science
- a medical school ~ a school for students of medicine

Note
The same item may also be a central adjective. For example, a criminal law can be a law which seems criminal, in which case criminal is a central adjective. For positional differences between these two in the adjective phrase, see 13.40f. With particular noun phrase heads, an attributive noun may be an alternative to the denominational adjective, eg: criminal detection/crime detection, or may be used exclusively, eg: law school, not *legal school; of the converse in medical school, not *medicine school.

5.18 Predicative only

Adjectives that are restricted or virtually restricted to predicative position are most like verbs and adverbs. They tend to refer to a (possibly tem-
porary: 13.4) condition rather than to characterize. Perhaps the most common are those referring to health or lack of health: faint, ill (esp BrE), well, unwell. However, some people use ill and (to a lesser extent) unwell as attributives too.

A larger group comprises adjectives that can or must take complementation (12.11), eg: afraid (that, of, about), conscious (that, of), fond (of), loath (to).

Many closely resemble verbs semantically:

He is afraid to do it ~ He fears to do it
They are fond of her ~ They like her

Some have homonyms that can occur both predicatively and attributively, eg: the conscious patient ~ the patient is conscious.

Note

Sick (esp AmE) is the exception among these 'health' adjectives in that its attributive use is very common:

The sick woman ~ The woman is sick

Semantic sub-classification of adjectives

5.19

[A] Static/dynamic

Adjectives are characteristically static, but many can be seen as dynamic (2.16). In particular, most adjectives that are susceptible to subjective measurement (5.20) are capable of being dynamic. Static and dynamic adjectives differ in a number of ways. For example, a static adjective such as tall cannot be used with the progressive aspect or with the imperative: *He's being tall, *Be tall. In contrast, we can use careful as a dynamic adjective: He's being careful, Be careful.

Adjectives that can be used dynamically include: awkward, brave, calm, careless, cruel, extravagant, foolish, funny, good, greedy, impudent, irritable, jealous, naughty, noisy, rude, timid.

[B] Gradable/non-gradable

Most adjectives are gradable, that is to say, can be modified by adverbs which convey the degree of intensity of the adjective. Gradability (5.33) includes comparison:

tall taller tallest
beautiful more beautiful most beautiful

and other forms of intensification:

very young so plain extremely useful

All dynamic adjectives are gradable. Most static adjectives (tall, old) are gradable; some are non-gradable, principally 'technical adjectives'.

5.21 Characteristics of the adverb

Like atomic (scientist) and hydrochloric (acid) and adjectives denoting provenance, eg: British (cf. 5.20).

[C] Inherent/non-inherent

Most adjectives are inherent (5.13), and it is especially uncommon for dynamic adjectives to be other than inherent; an exception is wooden in The actor is being wooden, which is both dynamic and non-inherent.

Note

Whether or not an adjective is inherent or non-inherent, it may involve relation to an implicit or explicit standard. Big is inherent in a big house, the standard being the relative size of mice; contrast a little mouse. Big is non-inherent in a big fool, the standard being degrees of foolishness; contrast a bit of a fool. The relative standard is to be distinguished from gradability as well as from the inherent/non-inherent contrast. For example, perfect and good are non-inherent in a perfect mother and a good mother, the standard being motherhood, but only good is gradable (a very good mother, "a very perfect mother"). Similarly, though the inherent big in a big elephant is gradable ('a very big elephant'), the inherent adjective in an enormous N is not gradable ('a very enormous N').

5.20 Semantic sets and adjectival order

Semantic sets have been proposed to account for the usual order of adjectives and for their co-occurrence (13.40 f):

(a) intensifying adjectives (5.14), eg: a real hero, a perfect idiot
(b) postdeterminers (4.10), and limiter adjectives (5.15), eg: the fourth student, the only occasion
(c) general adjectives susceptible to subjective measure, eg: careful, naughty, lovely
(d) general adjectives susceptible to objective measure, including those denoting size or shape, eg: healthy, large, square
(e) adjectives denoting age, eg: young, old, new
(f) adjectives denoting colour, eg: red, black
(g) nominal adjectives denoting material, eg: a woollen scarf, a metallic substance, and denoting resemblance to a material, eg: metallic voice, silken hair, cat-like stealth
(h) nominal adjectives denoting provenance or style, eg: a British ship, a Persian dress

Characteristics of the adverb

5.21

The most common characteristic of the adverb is morphological: the majority of adverbs have the derivational suffix -ly.

There are two types of syntactic function that characterize adverbs, but an adverb need have only one of these:

1. adverbial
2. modifier of adjective and adverb.
In both cases the adverb functions directly in an Adverb Phrase of which it is head or sole realization. Thus, in the adjective phrase far more easily intelligible, intelligible is modified by the adverb phrase far more easily, easily is modified by the adverb phrase far more, and more is modified by the adverb phrase far, in this last case an adverb phrase with an adverb as sole realization. In this chapter we have often found it convenient to refer to the syntactic functions of a particular adverb or type of adverb, since it is generally the adverb that dictates the syntactic functions of an adverb phrase (cf 5.2).

5.22
Adverb as adverbial
An adverb may function as adverbial, a constituent distinct from subject, verb, object, and complement (2.5).

Three classes of adverbials are established and discussed in Chapter 8: adjuncts, disjuncts, conjuncts.

Adjuncts are integrated within the structure of the clause to at least some extent. Eg:

- They are waiting outside
- I can now understand it
- I’ll speak to me about it briefly

Disjuncts and conjuncts, on the other hand, are not integrated within the clause. Semantically, disjuncts express an evaluation of what is being said either with respect to the form of the communication or to its content. Eg:

- Frankly, I am tired
- Fortunately, no one complained
- They are probably at home

Semantically, conjuncts have a connective function. They indicate the connection between what is being said and what was said before. Eg:

- We have complained several times about the noise, and yet he does nothing about it
- I have not looked into his qualifications. He seems very intelligent, though
- If they open all the windows, then I’m leaving

Adverb as modifier
5.23
Modifier of adjective
An adverb may premodify an adjective:

5.25 Modifier of prepositional phrase
The few adverbs that premodify particles in phrasal verbs also premodify prepositions or (perhaps rather) prepositional phrases:

- He knocked the man right out
- They left him well behind
5.26
Modifier of determiner, predeterminer, postdeterminer
Intensifying adverbs can premodify indefinite pronouns, predeterminers, and cardinal numerals:

NEARLY everybody came to our party
OVER two hundred десятков were reported
I paid MORE THAN ten pounds for it

The indefinite article can be intensified when it is equivalent to the unstressed cardinal one:

They will stay ABOUT a week

With ordinals and superlatives, a definite determiner is obligatory:

She gave me ALMOST the largest piece of cake

5.27
Modifier of noun phrase

A few intensifiers may premodify noun phrases: quite, rather (esp BrE), and the predeterminers such and exclamatory what. The noun phrase is normally indefinite, and the intensifiers precede any determiners. Rather requires the head to be a singular count noun and gradable (4.3 Note):

He told SUCH a (funny) story
[(funny) stories
I have never heard SUCH wickedness
It was RATHER a mess
He was QUITE some player
WHAT a (big) fool he is!

So and interrogative and exclamatory how also precede the indefinite article, but they require the noun phrase to contain a gradable adjective and the head of the noun phrase to be a singular countable noun. In this use, they cause the adjective to move in front of the article:

I didn't realize that he was SO big a fool

HOW tall a man is he? HOW tall a man he is!

Note
[a] In superficially similar noun phrases, rather may be intensifying the adjective, in which case it may precede or follow the determiner:

- It is rather a table
- It is rather big table
- It is a rather big table

[b] Kind of and sort of (both informal) usually follow the determiner:

He gave a sort of laugh
but may sometimes precede it: That was sort of a joke.

5.30 Adverb as complement of preposition

Other of phrases precede a determiner:

I had a bit of a shock

c) In informal or familiar style, wh-interrogatives can be intensified by ever and by certain set phrases, eg:

Where ever did I leave my keys?
Who on earth opened my letter?
What in heaven's name are you doing?(familiar)
Who the hell are you? (familiar)

Those intensified by ever are to be distinguished from wh-subordinators (11.6 f), which are written as one word with ever:

Wherever I park my car, I get fined

d) For anaphoric such ('like that'), see 10.39.

5.39

Some adverbs signifying place or time postmodify noun phrases (13.24):

PLACE: the way ahead, the neighbour upstairs, the sentence below
TIME: the meeting yesterday, the day before

Note

Indefinite pronouns, wh-pronouns, and wh-adverbs are postmodified by else: someone else(1), all else, who else, what else. Else also postmodifies compounds with where: somewhere, anywhere, everywhere, nowhere.

5.29

In some of the phrases in 5.28 the adverb can also be used as a premodifier: his home journey, the above photo, the upstairs neighbour.

A few other adverbs are also used as premodifiers: the away games, the then president, in after years. Then and above are probably the most common.

5.30 Adverb as complement of preposition

Some place and time adverbs function as complement of a preposition. Of the place adverbs, here and there take the most prepositions: along, around, down, from, in, near, on, out (of), over, round, through, under, up. Home can be the complement of the prepositions at, from, near, towards(s). Others are restricted to the preposition from:

above, abroad, below, downstairs, indoors, inside, outdoors, outside, upstairs, within, without

Time adverbs most commonly functioning as complement of prepositions are shown in the diagram.
Comparison and intensification

5.31

There are three degrees of comparison:

**Absolute:** young/easily

**Comparative:** younger/more easily

**Superlative:** youngest/most easily

The comparative is used for a comparison between two, and the superlative where more than two are involved. The superlative is sometimes used for a comparison between two, 'He is the youngest (of the two brothers)', but this is considered loose and informal by many.

Comparison (cf 11.37 ff) is expressed by

1. the inflected forms in -er and -est,
2. their periphrastic equivalents in more and most,
3. the forms for equational, lesser and least degrees of comparison, notably as, less, least.

Too in the sense 'more than enough' might also be mentioned here, *eg:* It's too long ('longer than it should be').

5.32

**Basis of comparison**

We can make the basis of comparison explicit. The most common ways of doing so include correlative constructions introduced by *than* (correlative to *more, less*) and by *as* (correlative to *as*), and prepositional phrases with *of*:

- John is *more/less* stupid than Bob (*is*)  [1]
- John behaves *more/less* politely than Bob (*does*)  [2]
- John is as stupid as Bob (*is*)  [3]
- John behaves as politely as Bob (*does*)  [4]
- John is the stupidest of *the (two) boys*  [5]
- Of *the (two) boys*, John behaves the more politely  [6]
- John is the most stupid of *the (three) boys*  [7]
- Of *the (three) boys*, John behaves the most politely  [8]

The basis of comparison can also be shown by the noun which the adjective premodifies:

- John is the more stupid *boy* (formal; more commonly 'John is more stupid than the other boy')
- John is the most stupid *boy*

Notes

[a] The prepositional phrases in [5–8] can be either initial or final. Final position is more frequent, especially when the comparison involves an adjective rather than an adverb.

[b] A basis of comparison may be implicit in the use of the absolute form, and in such cases the basis of comparison can also be made explicit (6.44):

He is stupid for a child of *his age*

5.33

**Gradability**

Amplifiers and comparatives can modify gradable adjectives and adverbs. The range for emphasizers and those downtoners not expressing
degree (e.g. virtually) is much wider, as we can see from their co-occurrence with a non-gradable adjective such as non-Christian:

He is definitely/virtually/*more*/very non-Christian

cf. He is very unchristian.

There are also restrictions on the use of particular intensifiers, and these can sometimes be stated in semantic terms:

most (happy (subjective), cf 5.20)
*tall (objective), cf 5.20
utterly (wrong (negative))
*right (positive)

Amplifiers and comparatives are available for adjectives that refer to a quality that is thought of as having values on a scale, and for adverbs that refer to a manner or to a time that is thought of in terms of a scale. Thus, in John is English the adjective English does not allow amplifiers or comparatives if it refers to John’s nationality, but admits them if it refers to his behaviour:

John is very English
more English than the English

We can also achieve an intensifying effect by repeating attributive adjectives or degree intensifiers:

an old, old man (‘a very old man’)
very, very good (‘extremely good’)

Note
There are exceptions to the co-occurrence of a particular intensifier with a semantic class of adjectives. For example, though utterly tends to co-occur with ‘negative’ adjectives, utterly reliable and utterly delightful are common. People vary in the exceptions they allow.

5.34
Unmarked term in ‘How’ questions and measure phrases

How is used as a pro-form for degree intensifiers of the adjective or adverb in questions and exclamations:

How efficient is he?  How efficiently does he work?
How beautiful she is!  How beautifully she dances!

‘Measure’ adjectives that cover a scale of measurement and have a term for each end of the scale use the upper extreme as the ‘unmarked’ term in How questions and with the measurements:

A: How old is your son?  B: He’s three months (old)

5.35 Inflection of adjectives for comparison

How old is he? is equivalent to What is his age?, and He’s three months old is equivalent to His age is three months.

Adjectives that are used as the unmarked term in How questions and with measurements are listed, with the marked term given in parenthesis:

depth (shallow)  old (young)  thickness (thin)
height (low)  tall (short)  width (narrow)
length (short)  

Other adjectives are used as the unmarked term for premodification by interrogative How (How heavy is it?) but are not used with measurements (*It is two pounds heavy). They include:

big (small)  fat (thin)  large (little)
bright (dim)  heavy (light)  strong (weak)

Some adverbs also use an unmarked term in How questions, e.g.:

How much/often/quickly did they complain?

Note
If we use the marked term, as in How young is John? we are asking a question that presupposes that John is young, whereas the unmarked term in How old is John? does not presuppose that John is old. Notice that neither term is neutral in exclamations:

How young he is! (‘He is extremely young’)  How old he is! (‘He is extremely old’)
CHANGES IN SPELLING
(1) Final base consonants are doubled when the preceding vowel is stressed and spelt with a single letter (cf 3.7):
   big ~ bigger ~ biggest
(2) In bases ending in a consonant + y, final y is changed to i (3.8):
   early ~ earlier ~ earliest
(3) Final -e is dropped before the inflections (3.9):
   brave ~ braver ~ bravest free ~ freer ~ freest

CHANGES IN PRONUNCIATION
(1) Syllabic /l/ as in simmle, ceases to be syllabic before inflections.
(2) Whether or not speakers pronounce final r, as in poor, the r is of course pronounced before the inflections.

Note
Well (‘in good health’) and ill (‘in bad health’, esp BrE) are inflected like good and bad respectively for the comparative:
He feels better/worse

5.36
Monosyllabic adjectives can normally form their comparison by inflection. Many disyllabic adjectives can also do so, though like most monosyllabic adjectives they have the alternative of the periphrastic forms:

My jokes are (funnier/funnest
   (more funny/most funny

Common disyllabic adjectives that can take inflected forms are those ending in an unstressed vowel, syllabic /l/, or /r(r)/:
(1) -v: funny, noisy, wealthy, friendly
(2) -ow: hollow, narrow, shallow
(3) -le: gentle, feeble, noble
(4) -er, -ere: clever, mature, obscure

Common adjectives outside these four categories that can take inflectional forms include common, handsome, polite, quiet, wicked.

Other adjectives can take only periphrastic forms:

We are (*reluctanter
   (*reluctantest
   more reluctant
   (the most reluctant (of all))
   to say anything

6.39 Modification of comparatives and superlatives

Nouns
Adjectives of participle form do not take inflections:
   *tiring, *wounding

5.37
Most adjectives inflected for comparison seem to be able to take periphrastic forms more easily when they are predicative and are followed by the basis of comparison:
He is more wealthy than I thought

Periphrastic forms are, however, abnormal with a number of monosyllabic adjectives, including those listed in 5.35 as forming their comparison irregularly.

5.38
Inflection of adverbs for comparison
For a small number of adverbs, the inflected forms used for comparison are the same as those for adjectives. As with adjectives, there is a small group with comparatives and superlatives formed from different stems:
well ~ better ~ best
   badly ~ worse ~ worst
little ~ less ~ least
   much ~ more ~ most
far ~ further ~ furthest

Adverbs that are identical in form with adjectives take inflections, following the same spelling and phonetic rules as for adjectives, e.g. early, late, hard, slow, fast, quick, long. Soon, which has no corresponding adjective, is frequently used in the comparative (soonest), but is not common in the superlative (soonest).

5.39
Modification of comparatives and superlatives
The comparatives of both adjectives and adverbs can themselves be further modified by amplifying intensifiers — certain noun phrases (most of them informal) and adverbs. In the following examples we parenthesize intensifiers of these intensifiers:

(that) / much
   (so) / (very)
   (all) / the
   far

a good bit / a lot
   a good deal / a great deal
   lots

better
   sooner
   more
   carefully

less
Similarly, many downtoners may premodify the comparatives:

rather better
somewhat sooner
a little more carefully
a (little) bit less carefully

The inflectional superlative may be premodified by very: the very best. If very premodifies the superlative, a determiner is obligatory, as in She put on her very best dress. Comparatives and superlatives can also be postmodified by intensifying phrases, the most common of which is by far, eg: He is funnier/funniest by far.

Correspondence between adjective and adverb

5.40
Adverbs are regularly, though not invariably, derived from adjectives by suffixation (App I.22). In addition, a correspondence often exists between constructions containing adjectives and those containing the corresponding adverbs. The simplest illustration is with adverbs equivalent to prepositional phrases containing a noun phrase with the corresponding adjective:

He liked Mary considerably
He liked Mary to a considerable extent
He spoke to John sharply
He spoke to John in a sharp manner
Politically, it is a bad decision
From the political point of view, it is a bad decision

Sometimes, either the adjective or the adverb forms may appear, with little or no semantic difference (5.9, 5.43). But normally, the adjective and its corresponding adverb appear in different environments:

her incredible beauty: her beauty is incredibly beautiful

5.41
There are many cases where a construction with the adverb form seems basic to an understanding of the corresponding construction with the adjective form.

(1) There are regular correspondences between sentences with an adverb and noun phrases with an adjective:

He loved her deeply: his deep love for her
He writes legibly: his legible writing

(2) The +jective-noun sequence may imply a process or a time relationship, with a corresponding noun phrase containing an adverb (5.16). For example, in the second of the following two interpretations of a beautiful dancer, the adjective refers to the process part of the agentive noun:

(a) a dancer who is beautiful
(b) a person who dances beautifully

(3) Most intensifying adjectives (5.14) can be seen as related to adverbs:

a real idiot: he is really an idiot

(4) Many limiter adjectives (cf 5.15) can be seen as related to adverbs:

the main reason: it was mainly the reason

The adjective and other word-classes

Adjective and adverb

5.42
Certain words beginning with a- have a predominantly predicative use. With respect to their ability to be used predicatively with both be and another intensive verb such as seem, we can contrast an a- adjective such as asleep with an a-adverb such as abroad:

The patient was asleep
The patient seemed abroad

A- adjectives are unacceptable as part of the predication after verbs of motion. A-adverbs, however, are acceptable and denote direction after such verbs. Notice the contrast between the a-adverbs in He went aboard/ abroad/ around/ away and the a- adjectives in *He went afraid/ alert/ asleep/ awake.

Common a- adjectives are: ablaze, aloof, afraid, aghast, alert, alike, alive, alone, aloof, ashamed, asleep, averse, awake, aware.

Note

[a] Alert and aloof are freely used attributively. Some of the other a- adjectives occasionally function attributively, though normally only when they are modified: the half asleep children, a somewhat afraid soldier, a really alive student ('lively'), a very ashamed girl.

[b] Some a- adjectives freely take comparison and premodification by very, eg: afraid, alert, alike, aloof, ashamed, averse. Others do so marginally, eg: asleep and awake. Alive to in the sense 'aware of' can be premodified by very and compared. Some of the a-adjectives, like many verbs, can also be premodified by very much (particularly afraid, alike, ashamed, aware), and aware can be premodified by (very) well too.
5.43 Certain items that function as adjectives are also used to define in some way the process denoted by the verb; this is a typical use of adverbs, eg: loud and clear in He spoke loud and clear. If in its adverbial use the item is not restricted to a position after the verb or (if present) the object, it undoubtedly belongs to both the adjective and adverb classes. For example, long and still, which commonly function as adjectives, are adverbs in pre-verb position in the following sentences:

Such animals have long had to defend themselves
They still can't make up their minds whether to go or not

Furthermore, the item clearly represents two different words if there is a semantic difference in the two uses, as with long and still.

In some cases, the adjective form and a corresponding -ly adverb can be used interchangeably, with little or no semantic difference, except that many people find the adjective form objectionable:

He spoke loud and clear/loudly and clearly
Drive slow (esp AmE)slowly
She buys her clothes cheap/cheaply (cf 12.26 f)

In other cases, there is no corresponding adverb form of the same lexical item, so that only the adjective form is available:

We returned early/fast/late today

Only a limited number of adjectives have adverbial uses: *We returned rapidly today.

The principal syntactic difference between the use of the adjective and adverb forms is that the adjective form, if admissible at all, is restricted to a position after the verb or (if present) the object:

He slowly drove the car into the garage
He drove the car slowly into the garage
*He slow drove the car into the garage
(?) He drove the car slow into the garage

Note
For adverbs as postmodifiers and as premodifiers in noun phrases, see 5.27 ff.

5.45 Adjective and noun

Some items can be both adjectives and nouns (cf also 5.6 ff). For example, criminal is an adjective in that it can be used both attributively (a criminal attack) and predicatively (The attack seemed criminal to us).

But criminal also has all the characteristics of a noun; for example, in having number contrast and the capacity to be subject of a clause, as in The criminals pleaded guilty to all charges.

Criminal is therefore both an adjective and a noun, and the relationship between the adjective criminal and the noun criminal is that of conversion (App I.25). Examples of other converted nouns:

There was only one black in my class
He is investigating the ancients' conception of the universe
The king greeted his nobles

5.45 Nouns commonly function as premodifiers of other nouns (13.34 f): the city council a love poem a stone wall August weather

In this function, the attributive nouns resemble adjectives. However, the basically nominal character of these premodifiers is shown by their correspondence to prepositional phrases with the noun as complement:

the council of the city a poem about love a wall (made) of stone weather (usual) in August

Such a correspondence is not available for attributive adjectives:

the urban council a long poem a thick wall hot weather

though we can sometimes use a postmodifying prepositional phrase with a related noun as complement, eg: a long poem—a poem of considerable length.

Some nouns can even function both attributively and predicatively. Moreover, these nouns are like adjectives in that they do not take number variation. The nouns denote material from which things are made or refer to style (cf the corresponding classes of adjective, 5.20):

that concrete floor—that floor is concrete (= is of concrete)
Worcester porcelain—this porcelain is Worcester

Some nouns can appear in predicative noun phrases after seem. In this, they resemble adjectives:

He seems a fool
His friend seems very much an Englishman
Your remark seems nonsense to me

These are indeed very close semantically to adjectives (foolish, English, nonsensical). The closeness is of course greatest for non-count nouns such as nonsense and fun, since, like adjectives, they do not have number
variation and can appear without an overt determiner. But, unlike adjectives functioning as heads of noun phrases (5.6 ff.), these non-count nouns take the zero article when they function (say) as direct object:

I like nonsense

He experienced bliss

Adjective and participle

There are many adjectives that have the same form as participles (cf. 13.29 ff.):

His views were very surprising The man seemed very offended

These adjectives can also be attributive: his surprising views, the offended man, the downhearted children.

The -ed participle of intransitive verbs can also be used attributively: the escaped prisoner ('the prisoner who has escaped'), a grown boy ('a boy who has grown (up)'). Only with some of these is the predicative use allowed:

*The prisoner is escaped

Her son is grown (dubious in BrE, but full-grown or grown-up is fully acceptable)

As with downhearted, there may be no corresponding verb, and sometimes a corresponding verb has a different meaning. We can therefore have ambiguous sentences where the ambiguity depends on whether we have a participle or an adjective:

They were (very) relieved (to find her at home) – adjective

They were relieved (by the next group of sentries) – participle

Often the difference between the adjective and the participle is not clear-cut, and lies in the verbal force retained by the latter. The verbal force is explicit for the -ing form when a direct object is present. Hence, in His views were alarming his audience, the -ing form is a participle. Similarly, the verbal force is explicit for the -ed form when a by agentive phrase with a personal agent is present, indicating the correspondence to the active form of the sentence, as in The man was offended by the policeman.

For both participle forms, modification by the intensifier very is an explicit indication that the forms have adjective status:

His views were very alarming The man was very offended

We might therefore expect that the presence of very together with an explicit indicator of verbal force would produce an unacceptable sentence. This is certainly so for the -ing participle form:

6.49 Reaction signal and initiator

*His views were very alarming his audience

However, with the -ed participle form, there appears to be divided usage, with increasing acceptance of the co-occurrence of very with a by agentive phrase containing a personal agent:

?The man was very offended by the policeman

And there is certainly no problem of co-occurrence if the agent is non-personal:

I'm very disturbed by your attitude

Note

[e] A participle is sometimes made fully adjectival by being compounded with another element:

He is looking (at a painting) He is (very) good-looking

It is breaking (his heart) It is (very) heart-breaking

[f] It is not only participles allowing the intensifier very that can be attributive (13.29):

the winning team, his published work, the captured prisoner.

g] A few adjectives are differentiated from participles by taking the -en suffix where participles with the same base have the -ed suffix (shawn, drunken, shrunk). For a few others, there is no difference between adjective and participle in spelling, but there is in pronunciation. Whereas the vowel of the participle suffix -ed is not pronounced, the suffix is treated in the adjective as a separate syllable pronounced /ɪd/: blessed, crooked, dogged, learned, rang, ed. The adjective aged is disyllabic when it is a synonym of elderly (my aged father), but is monosyllabic in such a sentence as My father is aged seventy.

The adverb and other word-classes

5.48 Conjunction and conjunction

A few conjunctions, eg: so, yet, resemble coordinators both in being connectives and in having certain syntactic features (cf. 9.10 ff.). In particular, unlike clauses introduced by subordinators, those introduced by conjunctions cannot be moved in front of the preceding clause. Thus, the order of the following two clauses (with the conjunction so in the second clause) is fixed:

We paid him a very large sum. So he kept quiet about what he saw.

If we change the order of the clauses, the relationship is changed and so must now refer to some preceding clause. However, the conjunctions differ from coordinators in that they can be preceded by a coordinator:

We paid him a very large sum, and so he kept quiet about what he saw.

5.49 Reaction signal and initiator

Certain other items must be positioned initially. They are important be-
cause of their high frequency in spoken English and some are restricted to the spoken language.

(1) reaction signals, eg: no, yes, hm
(2) initiators, eg: well, oh, ah

Reaction signals normally serve only as response utterances. Initiators can serve both as response utterances and as initiators of conversations.

Bibliographical note
On adjectives in general, see Vendler (1968). On the position of adjectives, see particularly Bollinger (1967b); on stative and dynamic adjectives, see Schoof (1969); on the intensification of adjectives and adverbs, see Bollinger (1972); on adverbs in general, see Chapter 8 below.

SIX
PREPOSITIONS AND PREPOSITIONAL PHRASES

6.1
In the most general terms, a preposition expresses a relation between two entities, one being that represented by the prepositional complement. Of the various types of relational meaning, those of place and time are the most prominent and easy to identify. Other relationships such as instrument and cause may also be recognized, although it is difficult to describe prepositional meanings systematically in terms of such labels. Some prepositional phrases may be best elucidated by seeing a preposition as related to a clause; eg: The man with the red beard ~ The man who has the red beard; my knowledge of Hindi ~ I know Hindi (4.70, 6.37).

6.2
The prepositional phrase
A prepositional phrase consists of a preposition followed by a prepositional complement, which is characteristically a noun phrase or a who-clause or V-ing clause:

<table>
<thead>
<tr>
<th>PREPOSITION</th>
<th>PREPOSITIONAL COMPLEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>at</td>
<td>the bus-stop</td>
</tr>
<tr>
<td>from</td>
<td>what he said</td>
</tr>
<tr>
<td>by</td>
<td>signing a peace treaty</td>
</tr>
</tbody>
</table>

That-clauses and infinitive clauses, although they frequently have a nominal function in other respects, do not occur as prepositional complements. Alternations between the presence and absence of a preposition are observed in cases like:

\[
\begin{align*}
\text{He was surprised at } & \quad \text{her remark} \\
\text{He was surprised at } & \quad \text{her saying this} \\
\text{He was surprised that she said this} & \quad \text{what she said}
\end{align*}
\]

Further examples of verbs and adjectives which can have either prepositional complements or that-clauses are:
6.3 Postposed prepositions

Normally a preposition must be followed by its complement; but there are some circumstances in which this does not happen, either because the complement has to take first position in the clause, or because it is absent:

WH-QUESTIONS: Which house did you leave it at? (7.52 f)
At which house is he staying? (formal)

RELATIVE CLAUSES: The old house which I was telling you about is empty (13.6 ff) (about which I was telling you: formal)

WHAT-CLAUSES: What I’m convinced of is that the world’s population will grow to an unforeseen extent (11.16)

EXCLAMATIONS: What a mess he’s got into! (7.63)

PASSIVES: She was sought after by all the leading impresarios of the day (14.8)

INFINITIVE CLAUSES: He’s impossible to work with (12.13)

A prejudice against such postposed prepositions remains in formal English, which offers (for relative clauses and for direct or indirect questions) the alternative of an initial preposition:

It was a situation from which no escape was possible

This construction is often felt, however, to be stilted and awkward in informal English, especially in speech, and indeed in some cases (7.53)

Note: In formal style, notwithstanding is sometimes postposed:
His intelligence notwithstanding, he was not successful in the examination

In addition there are several idiomatic usages such as all the world over, all the year round, search the house through (cf. search through it).

6.4 Simple and complex prepositions

Most of the common English prepositions, such as at, in, and for, are

decide (on), inform (of), insist (on), afraid (of), aware (of), sorry (about),
sure (of): see 12.11 f.

Note
[a] Exceptionally (mainly in idioms), an adverb (5.30) or an adjective may function as prepositional complement: at once, before long, in there, until now, since when, at least, at worst, in brief. Prepositional phrases can themselves be prepositional complements: 'He crawled from under the table.'
[b] That-clauses can often become in effect prepositional complements through the use of the appositive construction the fact that:

She became aware of the fact that I had deceived her

6.6 Syntactic functions of prepositional phrases

Simple, ie consist of one word. Other prepositions, consisting of more than one word, are called complex. Most of these are in one of the following categories:

[A] ADVERB OF PREP+PREP: along with, as for, away from, out of, up to, etc
[B] VERB/ADJECTIVE/CONJUNCTION/etc+PREP: owing to, due to, because of, etc
[C] PREP+NOUN+PREP: by means of, in comparison with, in front of, etc

In [C], which is by far the most numerous category, the noun in some complex prepositions is preceded by a definite or indefinite article:

in the light of; as a result of

Note:
Monosyllabic simple prepositions are normally unstressed; polysyllabic prepositions (whether simple or complex) are normally stressed. In complex prepositions, the stress falls on the word (adverb, noun, etc) preceding the final preposition.

6.5 Prepositions and prepositional adverbs

A prepositional adverb is a particle which behaves like a preposition with an ellipted complement:

A car drove past the door (past is a preposition)
A car drove past (past is a prepositional adverb; ie: past something or someone identified in the context)

In the examples below, the adverb is respectively (a) an adjunct, (b) a postmodifier:

(a) Despite the fine weather, we stayed in all day (place adjunct)
He hasn’t been here since (time adjunct)
(b) The day before, I had spoken to him in the street (postmodifier)

Note:
Prepositions normally unstressed are accented when they are prepositional adverbs:

He stayed in the 'house
He 'stayed in

6.6 Syntactic functions of prepositional phrases

Prepositional phrases may function as:

(a) Adjunct (8.2):[T1] by
The people were singing on the bus
(b) Disjunct (8.2):
To my surprise, the doctor phoned
Prepositions and prepositional phrases 6.7

(c) Conjunction (8.2):

On the other hand, he made no attempt to help the victim or apprehend her attacker.

(d) Postmodifier in a noun phrase (13.19 ff):

The people on the bus were singing.

(e) Complementation of a verb (12.10, 12.29):

We depend on you.

(f) Complementation of an adjective (12.11):

I am sorry for his parents.

Note

(a) Prepositional phrases may occasionally have a nominal function, eg as subject of a clause:

Between six and seven will suit me.

(b) In (e) and (f) the preposition is closely related to and is determined by the preceding verb or adjective.

Fig 6:1 Place and dimension

Prepositional Meanings: Place

6.7 Dimension

When we use a preposition to indicate place, we do so in relation to the dimensional properties, whether subjectively or objectively conceived, of the location concerned. Consider the following examples:

6.8 Positive position and direction: at, to, etc

My car is at the cottage.

There is a new roof on the cottage.

There are two beds in the cottage.

The use of at makes cottage a dimensionless location, a mere point in relation to which the car's position can be indicated. With on, the cottage becomes a two-dimensional area, covered by a roof, though on is also capable of use with a one-dimensional object, as in 'Put your signature on this line'. With in, the cottage becomes the three-dimensional object which in reality it is, though in is capable of being used with objects which are essentially two-dimensional, as in 'The cow is in the field', where field is conceived of as an enclosed space (contrast 'We walked on the beach'). Fig 6:1 sets out the dimensional orientation of the chief prepositions of place.

Note

Some of the prepositions in Fig 6:1 can be replaced by other prepositions with the same meaning: upon is a formal equivalent of on; inside and within can substitute for in, and outside for out of.

6.8 Positive position and direction: at, to, etc

Between the notions of simple position (or static location) and direction (movement with respect to a destination) a cause-and-effect relationship obtains:

**DIRECTION**

Tom went to the door

Tom fell on(to) the floor

Tom dived into(to) the water

**POSITION**

as a result: Tom was at the door

as a result: Tom was on the floor

as a result: Tom was in the water

A prepositional phrase of 'position' can accompany any verb, although the meaning of 'direction' generally (but by no means always – see 6.16) requires a dynamic verb (3.35) of 'motional' meaning, such as go, move, fly, etc.

The contrast between on (= 'surface') and in (= 'area') has various implications according to context, as these examples show:

- on the window: The frost made patterns on the window (window = glass surface)
- in the window/mirror: A face appeared in the window/mirror (window, mirror = framed area)
- on the island: Robinson Crusoe was marooned on an uninhabited island
- in the island: He was born in Long Island (the island has an institutional identity)
The opposition between at (dimension-type) and in (dimension-type 2/3) can also cause difficulty. In is used for continents, countries, provinces, and sizeable territories of any kind; but for towns, villages, etc., either at or in is appropriate, according to point of view: at/in Stratford-upon-Avon. A very large city, such as New York, London, or Tokyo, is generally treated as an area: He works in London, but lives in the country. But one could treat it as a point on the map if global distances were in mind: Our plane refuelled at London on its way from New York to Moscow.

With buildings, also, both at and in can be used. The difference here is that at refers to a building in its institutional or functional aspect, whereas in refers to it as a three-dimensional structure:

He’s at school (BrE) / in school (AmE) (= ‘He attends/is attending school’)

It’s in school (= (in BrE) ‘He’s actually inside the building – not, e.g. on the playing fields’)

So too, at/in Oxford.

Note
[a] In many cases (especially in colloquial English), at and in may be used for both position and destination: He died in the water; He fell on the floor.
[b] In addition to the prepositions mentioned, against, about, and around are commonly used as prepositions of simple position or destination: against in the sense ‘touching the side surface of’ (He’s leaning against the wall); about and around in the sense of ‘in the vicinity of’ (He’s been snooping about/around the place all day).
[c] Two additional meanings of on as a preposition of position are ‘attached to’:

The apples on the tree
and ‘on top of’

Humpty Dumpty sat on the wall

6.9 Negative position and direction: away from, off, etc
There is a parallel cause and effect relation with the negative prepositions away from, off, of (informal AmE), out of:

**DIRECTION**
Tom went away from the door

**POSITION**
Tom was away from the door
(= Tom was not at the door)

The negative character of these prepositions is shown by the parenthesized paraphrase. Cf: off = ‘not on’, out of = ‘not in’.

6.10 Relative position: by, over, under, etc
Apart from simple position, prepositions may express the relative position of two objects or groups of objects:

6.11 Relative destination: by, over, under, etc

He was standing by his brother (= ‘at the side of’)
I left the keys with my wallet (= ‘in the same place as’)

Above, over, on top of, under, underneath, beneath, below express relative position vertically whereas before, in front of, behind, after represent it horizontally. The diagram depicts the relations expressed by ‘A is above X’, ‘D is behind X’, etc. The antonyms above and below, over

above

A

behind

D

X

C

in front of

below

B

do not indicate and under, in front of and behind are not positive and negative, but converse opposites:

The picture is above the mantelpiece = The mantelpiece is below the picture
The bus is in front of the car = The car is behind the bus

Over and under as place prepositions are roughly synonymous with above and below respectively. The main differences are that over and under tend to indicate a direct vertical relationship and/or spatial proximity, while above and below may indicate simply ‘on a higher/lower level than’:

The castle stands on a hill above (rather than over) the valley
The doctor and the policeman were leaning over (rather than above) the body when we arrived

Underneath and beneath are less common substitutes for under; beneath is formal in style. Underneath, like on top of, generally indicates a contiguous relation.

Note
Other prepositions of relative position are beside, near (to), between, amid(st) (foi mal), among, amongst (esp BrE).

6.11 Relative destination: by, over, under, etc
As well as relative position, the prepositions listed in 6.10 (but not, generally, above and below) can express relative destination:
The bush was the only conceivable hiding-place, so I dashed behind it when it started to rain, we all went underneath the trees. This use is distinct from that denoting passage behind, under, etc (6.12).

6.12 Passage: by, over, under, etc
With verbs of motion, prepositions may express the idea of passage (i.e., movement towards and then away from a place) as well as destination. With the prepositions listed in 6.10, this occurs in sentences like:

He jumped over a ditch
Someone ran behind the goal-posts

In sentences like the last, or like The ball rolled underneath the table, there is an ambiguity: we can supply either the meaning of 'passage' (= 'the ball passed under the table on the way to some other destination') or the meaning of 'destination' (= 'the ball rolled under the table and stayed there').

Note
A triple ambiguity may in fact arise with the above sentences, or more clearly with A mouse scuttled behind the curtain, which may be interpreted not only in the sense of 'passage' and 'destination', but also in a positional sense, implying that the mouse stayed (scuttling back and forth) behind the curtain all the time.

6.13 Passage: across, through, past
The sense of 'passage' is the primary locative meaning attached to across (dimension-type 1/2), through (dimension-type 2/3) and past (the 'passage' equivalent of by which may also, however, be substituted for past in a 'passage' sense). Note the parallel between across and on, through and in in the diagram:

```
DIMENSION-TYPE 1/2
• on the grass ➔ across the grass

DIMENSION-TYPE 2/3
□□□□□ in the grass ➔ through the grass
```

The upper pair treat the grass as a surface, and therefore suggest short grass; the lower pair, by treating the grass as a volume, suggest that it has height as well as length and breadth — that is, that the grass is long. There is a meaning of over corresponding to across in this sense: The ball rolled over/across the lawn.

6.14 Orientation: beyond, over, past, etc
Direction: up, down, along, etc
Up, down, along, across (in a slightly different sense from that of 6.13), and (a)round, with verbs of motion, make up a group of prepositions expressing movement with reference to an axis or directional path. Up and down contrast in terms of vertical direction, while along (= 'from one end towards the other') contrasts with across (= 'from one side to another') in terms of a horizontal axis.

```
up
\  \      \  \    \  \  \  \  \  \\
|    |  \  |    |  \  |    |  \  |
\  \  /    \  \  /    \  \  /    \  \  /
\  \ /      \  \ /      \  \ /      \  \ /
\ /        \ /        \ /        \ /
/          /          /          /
```

But up and down are also used idiomatically in reference to a horizontal axis:

I walked up and down the platform
Up and down here express the notion of 'along', and need not have any vertical implications.

With (a)round, the directional path is an angle or a curve:

We ran up the hill
We ran (a)round the corner
Toward(s) is in a category of its own, having the meaning 'in the direction of'.

6.15 Orientation: beyond, over, past, etc
Most prepositions listed in 6.10 and 6.14 can be used in a static sense of orientation. This brings in a third factor apart from the two things being spatially related: viz. a 'point of orientation', at which (in reality or imagination) the speaker is standing. Beyond (= 'on the far side of') is a preposition whose primary meaning is one of orientation; furthermore, over (BrE), past, across, and through can combine the meaning of 'beyond' with more specific information of dimension-type, etc, on the lines described in 6.13:

He lives across the moors (ie 'from here')
The village past the bus-stop/through the wood, etc
Up, down, along, across, and (a)round (see 6.14) are used orientationally with reference to an axis in
The shop down the road (ie towards the bottom end of . . .)
His office is up/down the stairs (ie at (or towards) the top/bottom of . . .)
There’s a hotel across/along the road (ie on the other side/towards the other end of . . .)
He lives (a)round the corner

6.16 Resultative meaning
All prepositions which have motional meaning can also have a static resultative meaning indicating the state of having reached the destination:
I managed to get \{over the fence across the river\} (ie so that I was then on the other side)
So too with the verb be:
The horses are over the fence (ie are now beyond)
Resultative meaning is not always distinguishable out of context from other static meanings; its presence is often signalled, however, by certain adverbs: already, just, at last, (not) yet, etc.

6.17 Pervasive meaning: all over, throughout, etc
Over (dimension-type 1/2) and through (dimension-type 2/3), especially when preceded by all, have pervasive meaning (either static or motional):
That child was running all over the flower borders
Chaos reigned all through the house
Throughout, substitutable for all through, is the only preposition whose primary meaning is ‘pervasive’. Occasionally the ‘axis’ type prepositions of 6.14 are also used in a pervasive sense:
There were crowds (all) along the route
They put flowers (all) around the statue

6.18 Seven senses of over
Let us now see how one preposition (over) may be used in most of the senses discussed:

- **POSITION:** A lamp hung over the door
- **DESTINATION:** They threw a blanket over her

6.20 Metaphorical or abstract use of place prepositions

**Metaphorical or abstract use of place prepositions**

Many place prepositions have abstract meanings which are clearly related, through metaphorical (less, to their locative uses. Very often prepositions so used keep the groupings in terms of similarity or contrast of meaning) that they have when used in literal reference to place. This is often true, for example, of temporal usage (6.21).

One may perceive a stage-by-stage extension of metaphorical usage in such a series as:

(i) in shallow water (purely literal)
(ii) in deep water (also metaphorical = ‘in trouble’)
(iii) in difficulties (the preposition is used metaphorically)
(iv) in a spot (= ‘in a difficult situation’; both the preposition and the noun are metaphorical, since literally spot would require at: 6.7)

Examples in relation to the literal meanings are:

- **IN/OUT OF:** AMID (rare)/AMIDST (formal)
- **position** \(\rightarrow\) state, condition:
  - in/out of danger; amidst many troubles
- **enlosure** \(\rightarrow\) abstract inclusion:
  - in stories/plays; in a group/party; in/out of the race

**ABOVE/BELLOW/BENEATH**
vertical direction \(\rightarrow\) abstract scale:
- such behaviour is beneath (not below) him; he’s above me in salary

**UNDER**
vertical direction \(\rightarrow\) subjection, subordination:
- under suspicion/orders/compulsion
UP/DOWN
movement on vertical axis → movement on list or scale:
up/down the scale; up/down the social ladder

FROM/TO
starting point/destination → originator/recipient:
a letter/present from Browning to his wife (6.29–30)

BEYOND/PAST/OVER
resultative meaning; physical → abstract:
be beyond/past endurance; we’re over the worst

BETWEEN/AMONG, AMONGST (esp BrE)
relative position → abstract relation between participants:
a fight between two boys; they agree among(st) themselves

Note
A few prepositions (chiefly in and out of) can operate in an apparently converse relationship. For example:
The horse is in foal (= The foal is in the horse’s womb)
The office is out of envelopes (= There are no envelopes in the office)
Cf also (a ship) in ballast, out of breath.

Time
6.22
Time when: at, on, in
At, on, and in as prepositions of ‘time when’ are to some extent parallel to the same items as positive prepositions of position (6.7), although in the time sphere there are only two ‘dimension-types’, viz ‘point of time’ and ‘period of time’.
At is used for points of time, chiefly clock-time (at ten o’clock, at 6.30 pm, at noon, etc); also, idiomatically, for holiday periods (at the weekend (BrE), at Christmas, at Easter); and for phrases at night, at the/that time, etc.

On is used with phrases referring to days (on Monday, on the following day, on May (the) first); otherwise in or less commonly, during, is used to indicate periods of time: in the evening, during Holy Week, in August, in the months that followed, in the eighteenth century, etc.

Note
On Monday morning, on the following evening, etc illustrate an exceptional use of on with a complement referring to a part of a day, rather than a whole day. But with phrases like early morning, late afternoon it is normal to use in: in the late afternoon.

6.22
Duration: for, c’tc
Duration is expressed by for; contrast:

8.24 Between, by, and up to
for the summer (ie all through)
We camped there for the summer (ie at some time during the summer)

So too in idiomatic phrases like for ever and and for good (‘for ever’).
Over, all through, and throughout have a durational meaning parallel to their pervasive meaning in reference to place (6.17): We camped there throughout the summer. Over normally accompanies noun phrases denoting special occasions (such as holidays and festivals), and so generally refers to a shorter period of time than all through or throughout.
From . . . to is another pair of prepositions whose locative meaning is transferred to duration. The AmE alternative expression (from) . . . through avoids the ambiguity as to whether the period mentioned is included in the total span of time:
We camped there (from) June through September (AmE)
(= up to and including September)
We camped there from June to (or till) September
(= up to [and including] September)

Note:
[a] Except with verbs like stay, during refers to a point or period within duration rather than in duration itself: He spoke during the meeting.
[b] Precisely, with negatives and a superlative, for or (esp informally) in expresses exclusive duration: I haven’t seen him for [in] years.

6.23
Before, after, since, and until/till
As prepositions (but cf 11.21), these occur almost exclusively as prepositions of time, and are followed by either (a) a temporal noun phrase (eg: before next week), (b) a subjectless V-ing clause (eg: since leaving school), or (c) a noun phrase with a deverbal noun (App I.13, I.16, I.24) or some other noun phrase interpreted as equivalent to a clause:
until the fall of Rome (= ‘until Rome fell’)
before the war (= ‘before the war started or took place’)

Until specifies a terminal point with positive and a commencement point with negative predications:
We slept until midnight (= We stopped sleeping then)
We didn’t sleep until midnight (= We started sleeping then)

6.24
Between, by, and up to
Other prepositions of time are between, by, and up to:
I'll phone you between lunch and three o'clock
By the time we'd walked five miles, he was exhausted
Up to last week, I hadn't received a reply

By specifies a commencement point; contrast:
By that time he was exhausted (= He was then exhausted)
Until that time he was exhausted (= He was then no longer exhausted)

This means that by-phrases do not co-occur with verbs of durative meaning:

He lay there (by) midnight

Absence of prepositions of time

Prepositions of time when are always absent from adjuncts having the deictic words last, next, this, and that; the quantifying words some and every; and nouns which have 'last', 'next', or 'this' as an element of their meaning: yesterday/today/tomorrow. Cf 8.31 ff. For example:

I saw him last Thursday
I'll mention it next time I see him
Plums are plentiful this year
Every summer she returns to her childhood home

The preposition is usually optional with deictic phrases referring to times at more than one remove from the present, such as (on) Monday week (BrE), (in) the January before last, (on) the day before yesterday. So too with phrases which identify a time before or after a given time in the past or future: (in) the previous spring, (at) the following weekend, (on) the next day. On the whole, the sentence without the preposition tends to be more informal and more usual.

Note
Informally, we also have omission of the temporal preposition in sentences such as I'll see you Sunday, where the preposition on is omitted before a day of the week standing on its own. Another informal type of omission is in initial position preceding a plural noun phrase:
Sundays we go into the country

The preposition for is often omitted in phrases of duration:

We stayed there (for) three months
The snowy weather lasted (for) the whole time we were there
(For) a lot of the time we just lay on the beach
The omission almost invariably takes place with phrases which begin with all, such as all day, all (the) week:
We stayed there all week (not *for all week)
In other cases, however, the omission is impossible: for example, where the action of the verb is clearly not continuously co-extensive with the period specified:
I lived there three years
*I taught him three years
I taught him for three years

Initial position in the clause also seems to discourage omission: For 500 years, the cross lay unnoticed.

Prepositional phrases chiefly as adjunct

Cause ~ purpose

Causa, reason, motive: because, of, etc
At one end of the spectrum of cause ~ purpose, we have prepositions expressing either the material cause or the psychological cause (motive) of a happening:

Because of the drought, the price of bread was high that year
On account of his wide experience, he was made chairman
I hid the money, for fear of what my parents would say
The survivors were weak from exposure and lack of food
Some people support charities out of duty

Phrases of cause, reason and motive answer the question 'Why...?'

Purpose, intended destination: for

He'll do anything for money
Everyone ran for shelter
He died for his country

The notion of 'purpose' can be seen from the possibility of paraphrase by a clause (in order to... (see 11.31): for money = 'in order to gain money'.

Phrases of purpose or destination answer the questions 'Why...?', 'What... for?', 'Where... for?', or 'Who... for?'. They frequently occur as postmodifiers as well as adverbials: the scenery for the play, etc.
6.29  
RECIPIENT, GOAL, TARGET: FOR, TO, AT

He made a beautiful doll for his daughter

So used for 'intended recipient' (his daughter may or may not have actually received the doll), the for phrase can often be equated with an indirect object (7.6, 12.28): He made his daughter a beautiful doll. In contrast, a to phrase usually expresses the 'actual recipient':

He gave a beautiful doll to his daughter

(whi ch entails that his daughter actually received the doll). Here again there is a transformational relationship with the indirect object construction (7.9):

\[
\begin{align*}
\text{I lent} & \quad \text{the book to my friend} \quad \text{I lent} \quad \text{my friend the book} \\
\text{sold} & \quad \text{I sold} \\
\end{align*}
\]

AT, in combinations such as aim at (where the prepositional phrase is complementary to the verb), expresses INTENDED GOAL OR TARGET:

After aiming carefully at the bird, he missed it completely

A vicious mongrel was snapping at his ankles

As the first sentence shows, the intended goal need not be achieved. A contrast in many cases (kick at, charge at, bite at, catch at, shoot at, chew at) may be drawn between this use of at, in which some idea of 'aim' is implied, and the direct object construction, which indicates attainment of the goal or consummation of the action as planned. In other cases, to must be used if the attainment of the goal is to be stressed: He ran at me/He ran to me. Similarly, point at/to, throw at/to.

Note

There is a comparable difference between at and to when combined with verbs of utterance such as roar, bel ow, shout, mutter, growl: He shouted at me suggests that I am being treated merely as a target (as of abuse), while He shouted to me implies that the shouter is communicating with me, i.e. that I am the recipient of the message. At here usually suggests hostility.

6.30  
SOURCE, ORIGIN: FROM

The converse of to (= 'goal') is from (= 'source'):

Bill lent the book to me ↔ I borrowed the book from Bill

From is also used with reference to 'place of origin':

He comes from Austria (= he is Austrian)

6.32  
MEANS, INSTRUMENT: BY, WITH, WITHOUT

This type of prepositional phrase occurs not only as an adjunct, but as a postmodifier: the man from Mars; a friend of mine from London.

Means ~ agentic

6.31  
MANNER: WITH, IN... MANNER, LIKE

We were received with the utmost courtesy

The task was done in a workmanlike manner

The army swept through the city like a pestilence

Note that like with intensive verbs, as in Life is like a dream, refers not to manner but to resemblance.

Note

As distinct from like, prepositional as refers to actual role:

He spoke like a lawyer ("after the manner of . . .")

As a lawyer ("in the capacity of . . .")

6.32  
MEANS, INSTRUMENT: BY, WITH, WITHOUT

By can express the meaning "by means of":

I usually go to work by bus/train/car

The thief must have entered and left the house by the back door

By working the pumps, we kept the ship afloat for another 40 hours

With, on the other hand, expresses instrumental meaning:

He caught the ball with his left hand

Someone had broken the window with a stone

There is a correspondence between these sentences (which normally require a human subject and a direct object) and sentences containing the verb use: He used his left hand to catch the ball; Someone had used a stone to break the window. There is also another alternative construction in which the noun phrase denoting the instrument becomes the subject: His left hand caught the ball; A stone had broken the window. (On 'instrumental' subjects, see 7.10.)

For most senses of with, including that of instrument, without expresses the equivalent negative meaning: I drew it without a ruler (i.e. 'I did not draw it with a ruler').

Phrases of means and instrument answer the question 'How . . . ?':

A: How did he do it? B: By working hard.

Note

[6] Mode of transport is expressed by on as well as by: on the bus/the train/a ship/a plane. These are not purely locative phrases (location in such cases would be expressed by in rather than on: 6.7), but rather indicate the condition of being 'in
6.33 **INSTRUMENT, AGENTIVE: WITH, BY**

While the 'instrument' is the inert and normally inanimate cause of an action (the ball that breaks a window), the 'agentive' is its animate (normally human) initiating cause (the boy who threw the ball). In a passive sentence, the agentive or instrument can be expressed by a by-phrase, but only the instrument can be expressed by a with phrase:

> The window was broken by a ball by a boy
> with a ball with a boy

The agentive by-phrase also occurs as a postmodifier to signify authorship or the like: a novel by Tolstoy, a picture by Degas, etc.

6.34 **STIMULUS: AT**

The relation between an emotion and its stimulus (normally an abstract stimulus) can often be expressed by at or by the instrumental by:

> I was alarmed at/bys his behaviour

Both of these can be treated as passive equivalents of His behaviour alarmed me, and the noun phrase following at may be treated as a 'quasi-agent'. See further 12.11. Other prepositions introducing stimuli are illustrated in the examples resentful of, disappointed with, sorry about.

**Note**

[a] A number of other prepositions may introduce 'quasi-agents' after certain participles:

> I'm worried about this (~ This worries me)
> He's interested in history (~ History interests him)

Cf also: His plans were known to everyone (Everyone knew his plans)

[b] In BrE, with rather than at is used when the 'stimulus' is a person or object rather than an event: I was furious with (not at) John; I was delighted with (not at) the present. But in AmE, I was furious/angry/pleased at John is quite usual. With abstract nouns, at is unrestrictedly acceptable: I was furious at John's behaviour.

6.35 **Accompaniment: with**

Especially when followed by an animate complement, with has the meaning 'in company with' or 'together with':

> I'm so glad you're coming with us
> Jock, with several of his friends, was drinking till 2 am

In the second sentence, the with phrase serves a function very close to coordination with and: 'Jock and several of his friends were ...'

An example of a phrase of accompaniment as postmodifier is:

> Curry with rice is my favourite dish

In this as in most other senses (but cf 6.36) without is the negative of with: They're going without us! You never see him without (ie 'unaccompanied by') his dog.

6.36 **Support, opposition: for, with, against**

Are you for or against the plan? (ie Do you support or oppose the plan?)

It is prudent to go with rather than against the tide of public opinion For conveys the idea of support, with that of solidarity or movement in sympathy; against conveys the contrary idea of opposition. In this use, there is no negative without contrasting with with.

6.37 **Prepositional phrase chiefly as postmodifier**

'Having': of, with, without

Beside the following examples:

<table>
<thead>
<tr>
<th>(1)</th>
<th>(2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a man of courage</td>
<td>the courage of the man</td>
</tr>
<tr>
<td>a man with large ears</td>
<td>the man's large ears</td>
</tr>
</tbody>
</table>

a comparable relation exists paraphrasable with have: 'The man has courage', 'The man has large ears'. The two columns differ in that (1) makes a man the centre of attention, while (2) makes something about him the centre of attention. They also differ in the definiteness attributed to man (4.20), such that column (2) presupposes previous specification. The preposition of in (1a) is normally used with abstract attributes, while with in (1b) is more general and is especially common with concrete attributes. The correspondence of the of- and -s genitive in column (2) is also to be noted (4.63 ff).

The negative of with is again without:

> women without children ('childless women')
> the house without a porch ('... which has no porch')

The correspondence between phrases with with or without and relative clauses with have applies also to clauses in which have is followed by a quasi-clausal object (13.19):

> the girl with a boy friend in the navy
> (~... who has a boy friend in the navy)
6.38
Prepositional phrase chiefly as disjunct or conjunct
Concession: in spite of, despite, for + all, with + all, notwithstanding
I admire him, in spite of his faults
He lost the fight, for all his boasting
In spite of is a general-purpose preposition of concession; despite is rather more formal and notwithstanding is formal and rather legalistic in style. The combinations for all and with all (all being an obligatory pre-determiner with this meaning) are chiefly colloquial.

6.39
Reference: with regard to, with reference to (formal), as to (BrE), as for
With reference to your letter of April 29th, I confirm . . .
As for the burglar, he escaped through the attic window
As to and as for (= 'returning to the question of . . .') are less formal than the other complex prepositions in this group. Other prepositions within the same general area of meaning are regarding, in regard to, with respect to, in respect of, and on the matter of. Most can be used in postmodifying phrases as well as in disjuncts: I'd like to know your opinion as to/with regard to the burglar's behaviour.

6.40
Exception: except for, but, etc
All the students except but John passed the test
Commonly the complement is itself a prepositional phrase:
The weather is good today, except in the south-east
Except, excepting, and but function generally (in the case of but exclusively) in postmodifying phrases. Thus but cannot occur initially as a preposition:
*But me, everyone was tired. The prepositional phrase, in such constructions, is often separated from its noun head and postponed to the end of the clause (cf 14.30).
Everyone but me was tired—Everyone was tired but me
Except for, with the exception of, and apart from are used primarily in disjuncts.

Note
The resemblance and the contrast between but as a preposition and but as a conjunction (10.36) are brought out in:
{All the students had a good time but John
Most of the students had a good time but John did not

6.41
Ingredient, material: with, of, out of

6.41
Negative condition: but for
It is to be noted that but for is not used in the sense of exception, but rather that of 'negative condition': But for Gordon, we should have lost the match (ie 'If it hadn't been for Gordon . . .', 'If Gordon hadn't played as he did . . .', etc).

Prepositional phrase chiefly as complementation of verb or adjective
6.42
Subject matter: about, on
He told me about his adventures
He's lecturing on new techniques of management
With the meaning 'on the subject of, concerning', about and on can combine with a considerable range of verbs and adjectives, including:
speak about/on silent about/on
On tends to refer to deliberate, formal linguistic communication (speaking, lecturing, writing, etc) and is therefore inappropriate for verbs like chat or quarrel.
This difference of meaning occurs also with postmodifying phrases:
a book about/on butterflies a story about a princess

Note
[a] Of is a somewhat rarer and more literary alternative to about in tell . . . of; speak of; talk of; inform . . . of; etc. Both about and of are possible with think, but with a difference of meaning: He thought about the problem = 'He pondered/considered the problem'; He thought of the problem = 'He brought the problem to his mind'.
[b] A less usual alternative to about and on is concerning, which is formal to the point of being rather stilted: a dispute concerning land rights.

6.43
Ingredient, material: with, of, out of
After verbs of 'making', with indicates an ingredient, whereas of and out of signify the material or constituency of the whole thing:
You make a cake with eggs (ie 'eggs are one of the ingredients')
He made the frame (out of) wood (ie 'wood was the only material')
The same contrast of meaning is seen with build and construct:
The terminal was built/constructed with reinforced concrete
The terminal was built/constructed (out of) reinforced concrete

With also enters into expressions such as paved with brick, filled with water, loaded with hay.
6.44

Respect, standard: at, for
A gradable adjective implies some standard or norm (5.19): big means something different in This elephant is big, This cat is big, since 'big for an elephant' presupposes a larger scale, and a larger norm, than 'big for a cat'. We can make the norm explicit by a for phrase:

He's not bad for a youngster (i.e. considering he is a youngster)
That dog is long-legged for a terrier

A further way in which a prepositional phrase may specify the meaning of a gradable adjective is to use at to introduce the respect in which the adjective is appropriate to its noun phrase:

He's bad/hopeless/terrible at cemes

These two prepositional uses are not restricted to adjectival complementation:

I'm a complete dunce at mathematics
For an Englishman, he speaks foreign languages remarkably well
It's a dreadfully expensive toy for what it is

6.45

Reaction: to
Instead of regarding John's blunder in my surprise at John's blunder as the stimulus of the surprise (as in 6.34), we can regard the surprise as the reaction to the blunder. If we make the main clause represent the event acting as a 'stimulus', we can express the reaction by the preposition to followed by an abstract noun of emotion: To my annoyance, they rejected the offer. To my annoyance in this context is an attitudinal disjunct, comparable with adverbs such as annoyingly, surprisingly (8.50 f).

Alternatively, we can use a to-phrase to identify the person reacting: To me, their rejection of the offer was a surprise. In this last sense, to is not limited to emotive reactions; it applies equally to intellectual or perceptual responses:

To a mind based in common sense, his ideas are utterly absurd
It looked to me like a vast chasm

6.46

Modification of prepositional phrases
It is worth noting that prepositional meanings (particularly of time and place) are subject to modification as regards degree and measure, and that prepositions may therefore (like many adjectives and adverbs) be preceded by intensifiers. For example:

He had wandered right (= 'completely') off the path
Now their footsteps could be heard directly above my head

There is doubt in such cases as to whether the intensifier should be treated as applying to the whole prepositional phrase, or to the preposition alone. Occasionally, the possibility of placing the intensifier after the phrase suggests that it is the phrase as a whole that is qualified:

Few people are against public ownership completely

Bibliographical note
For some theoretical discussion of prepositional roles, see Fillmore (1968). On English prepositions, see Aksenenko (1956); Close (1962); Leech (1969a), Chapter 8, on prepositions of place; Quirk (1968), on complex prepositions.
SEVEN
THE SIMPLE SENTENCE

Clause patterns
7.1 Simple and complex sentences
It was pointed out in 2.4 that elements such as V(erb) and O(bject) were constituents of sentences and also of clauses within sentences. From now on, we shall speak of clauses and clause structure whenever a statement is true both for sentences and for the clauses of which it is composed:

\[
\begin{array}{cccccc}
S & A_{\text{process}} & V_{\text{trans}} & O_d & A_{\text{time}} \\
& I & \text{quickly shut} & \text{the door} & \text{before} & \text{the animal could escape} \\
& & (\text{conj}) & S & V_{\text{intrans}} & \\
\end{array}
\]

superordinate clause

In the present chapter, however, we shall be dealing only with simple sentences: that is, sentences consisting of only one clause.

7.2 Clause types
Concentrating on those elements that are normally obligatory, we can usefully distinguish seven clause types which we may designate in italics with the abbreviations explained in 2.4–10:

(1) SVA \[S \ V_{\text{intrans}} A_{\text{place}} \]
Mary is in the house

(2) SVC \[S \ V_{\text{intrans}} C_a \]
Mary is a nurse

(3) SVO \[S \ V_{\text{intrans}} O_d \]
Somebody caught the ball

(4) SVOA \[S \ V_{\text{trans}} O_d A_{\text{place}} \]
I put the plate on the table

(5) SVOC \[S \ V_{\text{trans}} O_d C_o \]
We have proved him right

(6) SVOO \[S \ V_{\text{intrans}} O_d O_d \]
She gives me expensive presents

(7) SV \[S \ V_{\text{trans}} \]
The child laughed

Note
[a] Most obligatory adjuncts are A_{place}, but there are many cases in which the term "place" applies only in a broad metaphorical sense: He is without a job while some are not A_{place} at all: They treated him kindly.
[b] Among the relatively major patterns not accounted for here, we might mention SVO_{n}: John made Mary a good husband (i.e., "John was a good husband to Mary").

7.3 Complementation
The elements O_d, C_o, and A in the above patterns are obligatory elements of clause structure in the sense that they are required for the complementation of the verb. By this we mean that, given the use of a particular verb in a particular sense, the sentence is incomplete if one of these elements is omitted: *I put the book (Type SVOA) and *He resembled (Type SVO) are unacceptable. In some cases, however, a direct object or object complement in one of these patterns may be considered grammatically optional:

He's eating – cf. He's eating an apple (Type SVO)
He made her career – cf. He made her career a success (Type SVOC)
He's teaching – cf. He's teaching German (Type SVO), He's teaching the boys (German) (Type SVOO)

Our approach, however, will be to regard these as cases of conversion (App.1.30), whereby a 'verb such as eat is transferred from the transitive to the intransitive category. Thus He's eating is an instance of clause-type SV rather than of SVO (with optional deletion of the object).
7.4 Optional adverbials
The patterns of 7.2 can be expanded by the addition of various optional adverbials; cf. 2.10. For example (optional adverbials are bracketed):

\[ SV: \quad (A) \quad S \quad V \quad (A) \]
(Sometimes) she sings (beautifully)

\[ SVA: \quad (A) \quad S \quad V \quad (A) \quad A \]
(In America) most students are (now) on vacation

\[ SVOO: \quad S \quad (A) \quad V \quad O \quad O \]
She (kindly) sent us some photographs

7.5 Transformational relations
One way of distinguishing the various clause types is by means of 'transformational' relations, or relations of grammatical paraphrase.

Clauses containing a noun phrase as object are distinguished by their ability to be converted into passive clauses, the object noun phrase assuming the function of subject (\(V\,_{pass} = \) passive verb phrase), the subject appearing (if at all) in an optional by-phrase, symbolized here as [A]:

Many critics disliked the play (S V O A) ↔ The play was disliked
(by many critics) (S \(V\,_{pass}\) [A])

Where the passive draws more attention to the result than to the action or agency, the 'resulting' copula get (12.8) frequently replaces be, though chiefly in rather informal usage:

The window was broken by my younger son
I know how the window got broken

A more gradually achieved result can be sometimes expressed by become:

With the passage of time, the furniture became covered in dust

The following examples illustrate the passive with other clause types:

Queen Victoria considered him a genius (S V O A _C_) ↔ He was considered a genius by Queen Victoria (S \(V\,_{pass}\) _C_ [A])
An intruder must have placed the ladder there (S V O A _Von_) ↔ The ladder must have been placed there by an intruder (S \(V\,_{pass}\) _Von_ [A])
My father gave me this watch (S V O O _A_) ↔ I was given this watch by my father (S \(V\,_{pass}\) _O_ [A])
(I) This watch was given to me by my father (S \(V\,_{pass}\) _O_ [A])

As Type SVVO clauses have two objects, they often have two passive

7.6 Intensive relationship
forms, as shown above – one in which the direct object becomes subject, and another (more common) in which the indirect object becomes subject. There is sometimes equivalence between Types SY, SVC, and SVA as is shown by occasional equivalences of the following kind:

\[ SV ↔ SV C_3 \]
The baby is sleeping ↔ The baby is asleep
Two loaves will suffice ↔ Two loaves will be sufficient

\[ SV ↔ SV A \]
He hurried ↔ He went fast

\[ SV C_3 ↔ SV A \]
He is jobless ↔ He is without a job

On the whole, English prefers to avoid the plain SV pattern where alternatives are available (14.33).

7.6 Intensive relationship
An SVOC clause is often equivalent to a clause with an infinitive or that clause (12.20 ff):

I imagined her beautiful ↔ I imagined her to be beautiful
I imagined that she was beautiful

This equivalence shows that the O and the C of an SVOC clause are in the same relation to one another as the S and C of an SVC clause. The relation is expressed, wherever it is expressed at all, by an intensive verb. The intensive relationship is important in other aspects of grammar apart from clause patterns. It underlies, for example, relations of apposition (9.45 ff).

Further, we may extend the concept of intensive relationship to the relation of subject to adverbial and object to adverbial in SVA and SVOA patterns respectively. (For SVOA patterns, see 8.29, 8.44.)

SVVO clauses can be transformed into SVOA clauses by the substitution of a prepositional phrase for the indirect object, with a change of order (12.28):

She sent Jim a card ↔ She sent a card to Jim
She left Jim a card ↔ She left a card for Jim

To and for, in their recipient senses (6.29), are the prepositions chiefly involved, but others, such as with and of, are occasionally found:

I'll play you a game of chess ↔ I'll play a game of chess with/against you
She asked Jim a favour ↔ She asked a favour of Jim
7.7 Multiple class membership of verbs

It must be borne in mind that one verb can belong, in various senses, to a number of different classes (App I.30), and hence enter into a number of different clause types. The verb get is a particularly versatile one, being excluded only from Type SV (and not even from this universally):

- SVC: He's getting angry
- SVA: He got through the window
- SVO: He'll get a surprise
- SVOC: He got his shoes and socks wet
- SVOA: He got himself into trouble
- SVOO: He got her a splendid present

Through the multiple class membership of verbs, ambiguities can arise:

*Through the multiple class membership of verbs, ambiguities can arise:*

*I found her an entertaining partner, like She called him a steward, could be interpreted either as SVO or as SVOO.*

7.8 Clause elements syntactically defined

**A subject**

(a) is normally a noun phrase (4.1) or a clause with nominal function (11.13 ff);

(b) occurs before the verb phrase in declarative clauses, and immediately after the operator (2.3) in questions (but cf 7.53, 14.12 ff);

(c) has number and person concord, where applicable (7.18, 7.26), with the verb phrase.

**An object (direct or indirect)**

(a) like a subject, is a noun phrase or clause with nominal function;

(b) normally follows the subject and the verb phrase (but cf 7.53, 7.63, 14.11);

(c) by the passive transformation, assumes the status of subject (7.5), but cf 12.16.

**An indirect object**, where both objects are present, precedes the direct object (except in rare instances like BrE Give it me), and is semantically equivalent to a prepositional phrase (7.6).

**A complement (subject or object)**

(a) is a noun phrase, an adjective phrase, or a clause with nominal function, having a co-referential relation with the subject (or object);

(b) follows the subject, verb phrase, and (if one is present) object (but cf 7.53, 14.11, 14.28);

(c) does not become subject through the passive transformation.

7.9 Clause elements semantically considered

**An adverbial** (see 8.1)

(a) is an adverb phrase, adverbial clause, noun phrase, or prepositional phrase;

(b) is generally mobile, ie is capable of occurring in more than one position in the clause;

(c) is generally optional, ie may be added to or removed from a sentence without affecting its acceptability, but of the obligatory adverbial of the SVA and SVOA patterns (7.2).

**Clause elements semantically considered**

**7.9**

**Agentive, affected, recipient, attribute**

The most typical semantic role of a subject is agentive; that is, the animate being instigating or causing the happening denoted by the verb:

*John opened the letter*

The most typical function of the direct object is that of the affected participant; ie a participant (animate or inanimate) which does not cause the happening denoted by the verb, but is directly involved in some other way:

*Many MPs criticized the Prime Minister*

The most typical function of the indirect object is that of recipient; ie an animate participant being passively implicated by the happening or state:

*I've found you a place*

The role of the subject complement is that of attribute of the subject, whether a current or existing attribute (with stative verbs) or one resulting from the event described by the verb (with dynamic verbs).

**Current attribute:** He's *my brother*; He seems *unhappy*

**Resulting attribute:** He became *restless*; He turned *traitor* (12.8 f)

The role of the object complement is that of attribute of the object, again either a current or resulting attribute:

**Current attribute:** I ate the meat *cold*; I prefer coffee *black*.

**Resulting attribute:** They elected him *President*; He painted the wall *blue* (12.26 f)

**Note**

Although: I've found a place for the magnolia tree and I've found a place for Mrs Jones appear to be grammatically equivalent, only the second can be transformed into a clause with indirect object:
I’ve found Mrs Jones a place
  *I’ve found the magnolia tree a place
This is because a tree is inanimate and cannot adopt a recipient role. With the verb
grow, however, there can be exceptions (cf 7.16):
  I’ve given the bathroom a thorough cleaning

7.10
Agentic and instrumental subject
Apart from its agentic function, the subject frequently has an instrumental role; that is, it expresses the unwitting (generally inanimate) material cause of an event:

The avalanche destroyed several houses

With intransitive verbs, the subject also frequently has the affected role that is elsewhere typical of the object:

Jack fell down
The pencil was lying on the table
We may also extend this latter function to subjects of intensive verbs:

The pencil was on the table

It is not possible to see a regular relation, in terms of clause function, between adjectives or intransitive verbs and the corresponding transitive verbs expressing causative meaning:

S_{Agentic} V
The door opened
The flowers have died

S_{Affected} V C
The road became narrower
I got angry

S_{Agentic} V
My dog was walking

7.11
Recipient subject
The subject may also have a recipient role with verbs such as have, own, possess, benefit (from), as is indicated by the following relation:

Mr Smith has bought/given/sold his son a radio → So now his son has/owns/possesses the radio

The perceptual verbs see and hear also require a ‘recipient’ subject, in contrast to look at and listen to, which are agentic. The other perceptual verbs taste, smell, and feel have both an agentive meaning corresponding to look at and a recipient meaning corresponding to see:

Foolishly, he tasted the soup
  *Foolishly, he tasted the pepper in the soup

The adverb foolishly requires the agentive; hence, the second sentence, which can only be understood in a non-agentive manner, does not make sense.

Verbs indicating a mental state may also require a recipient subject:

I thought you were mistaken (cf It seemed to me . . .
I liked the play (cf The play gave me pleasure)

Normally, recipient subjects go with stative verbs (3.35). Some of them (notably have and possess) have no passive form:

They have a beautiful house ← *A beautiful house is had by them

7.12
Locative, temporal and eventive subjects
The subject may have the function of designating place or time:

This path is swarming with ants (← Ants are swarming all over this path)

The bus holds forty people (← Forty people can sit in the bus)

Unlike swarm, the verbs in such sentences do not normally admit the progressive (*The bus is holding . . .) or the passive (*Forty people are held . . .).

Temporal subjects can usually be replaced by the empty it (7.13), the temporal expression becoming adjunct:

Tomorrow is my birthday (= It is my birthday tomorrow)
The winter of 1970 was exceptionally mild (= It was exceptionally mild in the winter of 1970)

Eventive subjects (with abstract noun heads designating arrangements and activities) differ from others in permitting intensive complementation with a time adverbial (cf 12.10):

The concert is on Thursday (but *The concert hall is on Thursday)

7.13
Empty it subject
Finally, a subject may lack semantic content altogether, and consist only of the meaningless ‘prop’ word it, used especially with climatic predications:

It’s raining/snowing, etc It’s getting dark It’s noisy in here
Note
The "prop" subject it as discussed here must be distinguished from the 'anticipatory' it of sentences like It was nice seeing you (14.24 ff), where the 'prop' subject is a replacement for a postponed clausal subject (= Seeing you was nice).

Locative and effected object
7.14
We turn now to roles of the direct object. Apart from the affected object (7.9), semantic types of direct object are the locative object and the effected object. An example of the 'locative object' is:

The horse jumped the fence ('...jumped over the fence')

There are similar uses of such verbs as turn, leave, reach, surround, penetrate, mount, cross, climb (see also 6.19).

An effected object is one that refers to something which exists only by virtue of the activity indicated by the verb:

- Baird invented television
- I'm writing a letter

With agentive subject and an affected object, one may always capture part of the meaning of a clause (eg: X destroyed Y) by saying 'X did something to Y'; but this does not apply to an effected object - Baird invented television does not imply 'Baird did something to television'.

One may include in this category also the type of object (sometimes called 'cognate') which repeats, partially or wholly, the meaning of the verb, as in sing a song.

Note
A more dubious category of object consists of phrases of extent or measure, as in:

- He ran a mile
- It costs ten dollars
- It weighs almost a ton

As these clauses do not generally permit the passive transformation, there is reason to analyse them as SVA rather than SVO. However, the final element behaves at least marginally like a direct object, as is shown by question forms with What alongside How much:

- What does it weigh? How much does it weigh?

The ambiguity of sentences such as We ate a lot, which may be SVO or SVA, is discussed in 8.18.

7.15
A third type of effected object takes the form of a verbal noun preceded by a common verb of general meaning, such as do, make, have, take, give. This construction is often more idiomatic, especially in colloquial English, than an equivalent construction with an intransitive verb (see further 14.33):

- He did little work that day ('He worked little that day')
- He made several attempts to contact me ('He attempted several times to contact me')

7.17 Summary
The prisoner made no comment
He's having a bath/a holiday (BrE)/a smoke
He took a rest/a vacation (AmE)/a dislike to her/a dive into the water
He gave a jump/a yell, etc

Have and take in these examples have agentive subjects (have being the typical British, and take the typical American form), while give usually has an involuntary force and therefore accompanies an 'affected' subject.

Note
Have can more easily have an affected subject than take (The baby had* took a bath), but cf: He took a beating.

7.16 Affected indirect object
There is only one exception to the rule that the indirect object has the role of 'recipient': this is when give (or sometimes related verbs like pay, owe) has an 'affected' object as direct object and an 'affected' object as indirect object:

- I paid her a visit ('I visited her')
- I gave the door a couple of kicks ('I kicked the door a couple of times')

These clauses, as the paraphrases make clear, are equivalent to clauses with a direct object as 'affected' object.

7.17 Summary
Although the semantic functions of the elements (particularly S and O) are quite varied, there are certain clear restrictions, such as that the object cannot be an 'agentive' or 'instrument' - that a subject (except in the passive) cannot be 'affected' - that an indirect object can have only two functions - those of 'affected' and 'recipient'. The assignment of a function to the subject seems to have the following system of priorities:

- If there is an 'agentive', it is S; if not,
  - If there is an 'instrument', it is S; if not,
    - If there is an 'affected', it is S; if not,
      - If there is a 'locative' or 'temporal' or 'eventive', it may be S; if not, The prop word it is S.

Naturally, where the passive transformation applies, it transfers the role of the direct or indirect object to the subject.

Note
The above treatment of sentence elements does not include discussion of clauses as S, O, and C.
Concord

7.18 Subject-verb concord
The most important type of concord in English is concord of number between subject and verb. Thus (3) and (4) are ungrammatical:

(1) The window is open
   (sing + sing)
(2) The windows are open
   (plur + plur)
(3) *The window are open
   (sing + plur)
(4) *The windows is open
   (plur + sing)

A clause in the position of subject counts as singular for purposes of concord: How they got there doesn’t concern me! To treat them as hostages is criminal. The same is true of prepositional phrases, etc., acting as subject: After the exam is the time to relax, etc. Nominal relative clauses on the other hand, since they are equivalent to noun phrases (11.13), may have plural as well as singular concord: What were once human dwellings are now nothing but piles of rubble.

Note
[a] In fact, it is possible to generalize the rule as ‘A subject which is not definitely marked for plural requires a singular verb’. This would explain, in addition to clausal and adverbial subjects, the tendency in informal speech for to follow the pseudo-subject there in existential sentences such as There’s hundreds of people on the waiting list (14.19 ff).
[b] Apparent exceptions to the concord rule arise with singular nouns ending with the -s of the plural inflection (measles, billiards, mathematics, etc. 4.35), or conversely plural nouns lacking the inflection (cattle, people, clergy, etc. 4.35):

Measles is sometimes serious Our people are complaining
[c] Plural words and phrases (including coordinate phrases, see 7.21) count as singular if they are used as names, titles, quotations, etc. (see further 9.27):
Crime and Punishment is perhaps the best-constructed of Dostoyevsky’s novels; but The Brothers Karamazov is undoubtedly his masterpiece.
‘The Cedars’ has a huge garden ‘Senior Citizens’ means, in common parlance, people over sixty
The titles of some works which are collections of stories, etc., however, can be singular or plural: The Canterbury Tales exist/exists in many manuscripts.

7.19 Notional concord, and proximity
Two factors interfere with concord as presented in 7.18. ‘Notional concord’ is agreement of verb with subject according to the idea of number rather than the actual presence of the grammatical marker for that idea. Thus the government is treated as plural in The government have broken all their promises (BrE), as is shown not only by the plural verb have, but also by the pronoun their.

7.21 Coordinated subject
The principle of ‘proximity’ denotes agreement of the verb with whatever noun or pronoun closely precedes it, sometimes in preference to agreement with the headword of the subject:

No one except his own supporters agree with him
One in ten take drugs

7.20 Collective nouns
In BrE, collective nouns, notionally plural but grammatically singular, obey notional concord in examples such as the following where AmE usually has the singular:

The public are tired of demonstrations
The audience were enjoying every minute of it

Although singular and plural verbs are more or less interchangeable in these contexts, the choice is based, if on anything, on whether the group is being considered as a single undivided body, or as a collection of individuals (cf 4.62). Thus plural is more likely than singular in [2], because consideration is being given to the individual reactions of members of the audience. Contrastingly, singular has to be used in sentences like The audience was enormous.

Coordinated subject
7.21 When a subject consists of two or more noun phrases coordinated by and, a distinction has to be made between appositional and non-appositional coordination. Under NON-APPOSITIONAL COORDINATION we include cases that can be treated as an implied reduction of two clauses. These have a verb in the plural:

Tom and Mary are now ready (=> Tom is now ready and Mary is now ready)
What I say and what I think are my own affair (=> What I say is . . . and what I think is . . .)

A singular verb is used with conjoinings which represent a single entity:

The hammer and sickle was flying from a tall flag pole

Conjoinings expressing a mutual relationship, even though they can only indirectly be treated as reductions of clauses in this way, also take a plural verb:
Your problem and mine are similar (=> Your problem is similar to mine and mine is similar to yours)
With the less common appositional coordination, however, no such reduction is possible at all, for the coordinated structures refer to the same thing. Hence a singular verb is used:

This temple of ugliness and memorial to Victorian bad taste was erected at the Queen's express wish

The two opening noun phrases here both refer to the same thing. The following example, however, is ambiguous and could have either a singular or plural verb according as the brother and editor are one person or two:

His younger brother and the subsequent editor of his collected papers was/were with him at his death-bed

Some latitude is allowed in the interpretation of abstract nouns since it is not always easy to decide if they represent one quality or two:

Your fairness and impartiality has/have been much appreciated

7.22
A single noun head with coordinate modifiers may imply two separate sentences (cf. 9.33), with the result that a plural verb may follow a singular non-count noun subject quite legitimately:

Good and bad taste are inculcated by example

(⇒ Good taste is ... and bad taste is ...) [1]

A similar collapsing of coordinate subjects into a single structure is observed when the subject is a clause:

What I say and think are no business of yours

(⇒ What I say is ... and what I think is ...) [2]

where the alternative with is would mean

That which I say and think is no business of yours

7.23
Concord involving (either ...) or is illustrated as follows:

Either the Mayor or his deputy is bound to come [1]
Either the strikers or the bosses have misunderstood [2]
Either your brakes or your eyesight is at fault
Either your eyesight or your brakes are at fault [3]

No problem arises with [1] and [2], but with [3] there is divided usage, neither singular nor plural seeming right. So too: 'He asked whether one

7.25
Indefinite expressions of amount

Another area of ambivalence is that of indefinite and negative expressions of amount. For example, in

I've ordered the shrubs, but none (of them) have/has yet arrived

grammatical concord would suggest that none is singular; but no such concord (we might paraphrase as 'they have not arrived') invites a plural verb. Has is therefore more conventionally 'correct', but have is more idiomatic in speech. These comments may be extended to neither and either as indefinite pronouns:

I sent cards to Mavis and Margery but neither (of them) has/have replied; in fact, I doubt if either (of them) is/are coming.

If a prepositional phrase with a plural complement follows the indefinite construction, a plural verb is favoured not only because of notional concord but because of the proximity rule:

none of them are ... either of the girls are ...

7.25
The same proximity principle may lead to plural concord even with the indefinites each, every, everybody, anybody, and no one, which are otherwise undoubtedly singular:

?No one, no: even the teachers, were listening
?Every member of that vast crowd of 50,000 people were pleased to see him
Although these sentences might well be uttered in casual speech, or inadvertently written down, most people would probably regard them as ungrammatical, because they flatly contradict grammatical concord.

Other, more acceptable, instances of ‘attraction’ arise with singular nouns of kind and quantity:

A large number of people have applied for the job
Those kind/sort/type of parties are very enjoyable (informal)

The latter illustrates an idiomatic anomaly: there is lack of number concord between the noun and the determiner those, as well as with the verb. The awkwardness can be avoided by rephrasing as Parties of that kind...

Note
The proximity principle, if taken to mean that agreement is determined by whatever immediately precedes the verb, can explain a singular verb in cases of inversion or of an adverbial quasi-subject: Where’s the scissors?; Here’s John and Mary; There’s several bags missing. As what precedes the subject here is not marked for plural (7.18 Note a), the singular verb follows by attraction. These are colloquial examples; in formal English are would be substituted.

7.26 Concord of person
As well as concord of number, there is concord of person between subject and verb:

I am your friend (1st PERSON SINGULAR CONCORD)
He is ready (3rd PERSON SINGULAR CONCORD)
He knows you

Following the principle of proximity, the last noun phrase of a coordinate subject (where the coordinator is or, either... or, or neither... nor) determines the person of the verb:

Neither you, nor I, nor anyone else knows the answer
Either my wife or I am going

Because many people find such sentences unacceptable, they often prefer to use a modal auxiliary, which is invariable for person, e.g. Either my wife or I will be going.

Note
In cleft sentences (14.15.f), a relative pronoun subject is usually followed by a verb in agreement with its antecedent: It is I who am to blame. But 3rd person concord prevails (in informal English) where the objective case pronoun me is used: It’s me who’s to blame.

7.29 Pronoun concord
Personal pronouns in the 3rd person agree with their antecedents both in number and (with the singular pronouns he, she, and it) in gender:

John hurt his foot
Beatrice hurt her foot

John and Beatrice hurt their feet

The climbers hurt their feet
By contrast, *John hurt her foot* would mean that John hurt someone else’s foot (the someone else having been previously mentioned).

**7.30**

English has no sex-neutral 3rd person singular pronoun, and so the plural pronoun *they* is often used informally, in defiance of number concord, as a substitute for the indefinite pronouns *everyone, everybody, someone, anybody, anyone, anybody, no one, nobody.*

- *Everyone* thinks they have the answer
- Has anybody brought their camera?
- No one could have blamed themselves for that

The plural pronoun is a convenient means of avoiding the dilemma of whether to use the *he* or *she* form. The same dilemma can arise with coordinate subjects and with some indefinite noun phrase subjects, but here, resort to the evasive device of the plural pronoun is perhaps not so acceptable:

- *Either he or his wife is going to have to change their attitude*
- *Not every drug addict can solve their problem so easily*

The use of *they* in sentences like [1–3] is frowned upon in formal English, where the tendency is to use *he* as the ‘unmarked’ form when the sex of the antecedent is not determined. The formal equivalent of [1] is therefore:

- *Everyone* thinks *he* has the answer

There is a still more pedantic alternative, the rather cumbersome device of conjoining both masculine and feminine pronouns:

- Every student has to make up *his or her own mind*

**Note**

On concord involving relative pronouns, see 13.5.

**The vocative**

**7.31**

A vocative is a nominal element added to a sentence or clause optionally, denoting the one or more people to whom it is addressed, and signalling the fact that it is addressed to them:

- **JOHN, I WANT you** (voc S V Oa)  
  *It’s a lovely day, Mrs Johnson* (S V Cb voc)  
  *you, my friend, will have to work harder* (S voc V A)

These three sentences show how a vocative may take an initial, medial, or final position in the sentence; in its optionality and freedom of position, it is more like an adverbial than any other element of clause structure.

**7.32**

Intonationally, the vocative is set off from the rest of the clause, either by constituting a separate tone-unit or by forming the post-nuclear part of a tone unit (App II.7). The most characteristic intonations are shown above: fall-rise for an initial vocative; rise for a medial or final vocative.

**7.33**

In form, a vocative may be

1. A single name with or without title: *John, Mrs Johnson, Dr Smith*
2. The personal pronoun *you* (markedly impolite); eg: *Behave yourself, you*. Or an indefinite pronoun; eg: *Get me a pen, somebody.*
3. Standard appellatives, usually nouns without pre- or postmodification (not even the possessive pronoun):

   **FAMILY RELATIONSHIPS:** *mother, father, uncle*; or more familiar forms like *mom*(my) (AmE), *mum*(my) (BrE), *dad*(my), *auntie*

   **EDEARMENTS:** *my darling/ dearest/ honey* (AmE)/ *love*

   **TITLES OF RESPECT:** *sir, madam, My Lord, Your Excellency, Your Majesty, ladies and gentlemen*

   **RANK OR PROFESSION OR STATUS:** *doctor, Mr/Madam Chairman, Mr President, Mr Prime Minister, Father (for priest)*: Bishop

4. A nominal clause (very occasionally): *Whoever said that, come out here.*

5. Items under (1), (2), or (3) above with the addition of modifiers or appositive elements of various kinds:

   1. *My dear Mrs Johnson; young John*
   2. *You with the red hair; you over there* (impolite); informal but not impolite: *you boys; you (young) fellows; you guys* (AmE)
   3. *Old man/fellow (familiar); young man/woman*  

One obvious function of a vocative in English is to seek the attention of the person addressed, and especially to single him out from others who may be within hearing. A second function, less obvious but certainly no less important, is to express the attitude of the speaker towards the addressee. Vocatives are generally used as a positive mark of attitude, to signal either respectful distance or familiarity (varying from mild friendliness to intimacy).

**Negation**

**7.33**

The negation of a simple sentence is accomplished by inserting *not, n’t* between the operator and the predication:
The attempt has succeeded ~ The attempt has not succeeded
We may win the match ~ We may not win the match
He is coming ~ He isn’t coming
We have been defeated ~ We have not been defeated

In these instances, there is an item in the positive sentences that can serve as operator. When this is not so, the auxiliary do is introduced and this, like modal auxiliaries, is followed by the bare infinitive:
She sees me every week ~ She doesn’t see me every week
They understood the problem ~ They did not understand the problem

Sentences with lexical be behave exactly as when be is auxiliary: She is a teacher ~ She isn’t a teacher. Lexical have usually has do as operator (though in BrE it often need not, and informally got is often added):
He has enough money ~ He doesn’t have enough money (esp AmE)
He hasn’t (got) enough money (esp BrE)

7.34
Abbreviated negation
In circumstances where it is possible to abbreviate the operator, by the use of a contracted form enclitic to the subject (usually only a pronoun), two colloquial and synonymous forms of negation are possible (3.19–21):

He isn’t coming ~ He’s not coming
We aren’t ready ~ We’re not ready
They haven’t caught him ~ They’ve not caught him
She won’t miss us ~ She’ll not miss us
He wouldn’t notice anything ~ He’d not notice anything

Note
[a] As there is no contracted form of am not, I’m not coming has no alternative of the kind given in the left-hand column above. Another consequence of this gap is that there is no universally accepted colloquial question form corresponding to the stilted formal Am I not correct? The contraction aren’t is sometimes substituted: Aren’t I correct? In AmE, ain’t has considerable currency in both declarative and interrogative use.
[b] Restrictions on certain negative forms, especially mayn’t, mustn’t, oughtn’t, daren’t, and needsn’t, are noted in 7.42.

7.35
Non-assertive forms
There are numerous items that do not naturally occur outside negative, interrogative, and conditional clauses; for example:
We haven’t seen any soldiers
*We have seen any soldiers

7.37
Alternative negative elements
These items (which may be determiners, pronouns, or adverbs) are the non-assertive forms (cf. 4.93), and the following examples will illustrate their range:
We’ve had some (lunch) ~ We haven’t had any (lunch)
I was speaking to someone ~ I wasn’t speaking to anyone
I saw him somewhere ~ I didn’t see him anywhere
She was somehow surprised ~ She wasn’t in any way surprised
They sometimes visit us ~ They rarely/never/don’t ever visit us
He helped to some extent ~ He didn’t help at all
They’ve arrived already ~ They haven’t arrived yet
John is coming too ~ John isn’t coming either
They ate too many (cakes) ~ They didn’t eat very many (cakes)
He’s still there ~ He isn’t there now/lany longer
I like her a great deal ~ I don’t like her much
He’s been a long way ~ He hasn’t been far
She was away a long time ~ She wasn’t away long
He saw one or other of them ~ He didn’t see either (one, AmE) of them

In several of the negative sentences, the negative particle and the non-assertive form can combine to produce a negative form (ever ~ never) or can be replaced by a negative form (He hadn’t anything ~ He had nothing).

Note
Non-assertive forms cannot normally be subject in a negative sentence (but cf. 4.93):
John didn’t see anyone ~ No one was seen by John
*Anyone wasn’t seen by John

7.36
Negative intensification
There are various ways of giving emotive intensification to a negative. For example, by any means and (informally) a bit are common alternatives to at all as non-assertive expressions of extent. Negative determiners and pronouns are given emphasis by at all, whatever: I found nothing at all the matter with him! You have no excuse whatever. Never is repeated for emphasis, or else combined with an intensifying phrase such as in (all) his/her etc life: I’ll never, never go there again; I’ve never in all my life seen such a crowd. The combinations not one and not a (single) are emphatic alternatives to no as determiner with a count noun.

7.37
Alternative negative elements
Instead of the verb, another element may be negated:
An honest man would not lie ~ I didn’t see any birds
No honest man would lie ~ I saw no birds
7.39
Seldom, rarely, etc
There are several words which are negative in meaning, but not in appearance. They include:

seldom and rarely
scarcely, hardly, barely
little and few (in contrast to the positive a little and a few)
only

They have the following similarities to the ordinary negative items:

(1) They are followed by non-assertive rather than assertive forms:
I seldom get any sleep
I've spoken to hardly anyone who disagrees with me
Few changes in government have ever taken so many people by surprise
Only two of us had any experience at sailing

(2) When in pre-subject position, some of them can cause subject-operator inversion:
Rarely does crime pay so well as Mr. Jones seems to think
Scarcely ever has the British nation suffered so much obloquy
Little need I dwell upon the joy of that reunion

The inversion, as before, is literary or rhetorical in tone.

(3) They are followed by positive rather than negative tag-questions (7.48f):
She scarcely seems to care, does she?

In addition, there are verbs, adjectives, or prepositions with negative meaning that take non-assertive forms:

He denies I ever told him
I forgot to ask for any change
Unaware of any hostility

7.40 Scope of negation
A negative form may be said to govern (or determine the occurrence of) a non-assertive form only if the latter is within the scope of the negation, i.e., within the stretch of language over which the negative meaning operates (shown here with a horizontal bracket). The scope of the negation normally extends from the negative word itself to the end of the clause, or to the beginning of a final adjunct. The subject, and any adjuncts occurring before the predication, normally lie outside it. (The operator is sometimes within, and sometimes outside, the scope: 7.42.) There is thus a contrast between:
I definitely didn't speak to him ('It's definite that I did not")
I didn't definitely speak to him ('It's not definite that I did")

When an adverbial is final, however, it may or may not lie outside the scope (cf. 8.3):
I wasn’t listening all the time (ie I listened none of the time)
I wasn’t listening all the time (ie I listened some of the time)

If an assertive form is used, it must lie outside the scope:
I didn't listen to some of the speakers (ie I listened to some)
I didn't listen to any of the speakers (ie I listened to none)

As we have seen (7.38), the scope can sometimes extend into a subordinate clause: I didn’t know that anyone was coming.

7.41 Focus of negation
We need to identify not only the scope, but the focus of negation. A special or contrastive nuclear stress falling on a particular part of the clause indicates that the contrast of meaning implicit in the negation is located at that spot, and also that by implication the rest of the clause can be understood in a positive sense:

Harry didn’t attack the Labour government
(Ie 'Someone attacked . . ., but it wasn't Harry')

Harry didn't attack the Labour government
(Ie 'He did something to the Labour Government but he didn't attack it')

Harry didn’t attack the Labour government
(Ie 'He attacked some government, but it wasn't the Labour one')

Scope and focus are interrelated such that the scope must include the focus. From this it follows that one way of signalling the extent of the scope is by the position of the focus. Indeed, since the scope of the negation is often not otherwise clearly signalled, we can indicate it by where we place the information focus. One example of this is when, atypically, the scope of the negation is extended to include a subordinate clause of reason, with a contrastive fall+rise to emphasize this:

7.42 Negation of modal auxiliaries
The negation of modal auxiliaries requires some attention, in that here the scope of the negation may or may not include the meaning of the auxiliary itself. We therefore distinguish between AUXILIARY NEGATION and MAIN VERB NEGATION:

AUXILIARY NEGATION:
may not (= ’permission')
You may not go swimming ('You are not allowed . . .')

cannot, can't (in all senses)
You can't be serious ('It is not possible that . . .')

You can’t go swimming ('You are not allowed . . .')

She can't ride a bicycle ('She is not able to . . .')

need not, needn’t
You needn't pay that fine ('You are not obliged to . . .')

It needn’t always be my fault ('It is not necessary that . . .')

MAIN VERB NEGATION:
may not (= ’possibility')
They may not bother to come if it’s wet ('It is possible that they

will not bother to come . . .')
will not, won’t (all senses)
  Don’t worry, I won’t interfere (‘I’m willing not to interfere’)
  He won’t do what he’s told (‘He insists on not doing . . . ’)
  They won’t have arrived yet (‘I predict that they’ve not arrived yet’)
shall not, shan’t (all senses)
  Don’t worry, you shan’t lose your reward (‘I’m willing to see that you don’t lose your reward’)
  I shan’t know you when you return (‘I predict that I shall not know . . . ’)
must not, mustn’t (‘obligation’)
  You mustn’t keep us all waiting (‘you’ll oblige me by not keeping us all waiting’)
ought not, oughtn’t (both senses)
  You oughtn’t to keep us waiting (‘obligation’)
  He oughtn’t to be long (‘necessity’)

Certain auxiliaries (can and need) follow the pattern of auxiliary negation, while others (will, shall, must) follow that of main verb negation. May belongs to the former group in its ‘permission’ sense, but to the latter group in the sense of ‘possibility’. Mustn’t is not used at all (and must not only rarely) in the ‘necessity’ sense; instead, we can use can’t in the sense of ‘impossibility’. Thus the negation of You must be telling lies is You can’t be telling lies. A common auxiliary negation of must is needn’t, which has the two meanings of non-obligation and non-necessity:

A: Must we pack now?  B: No, we needn’t till tomorrow.

Because of the diametric opposition of meaning between ‘permission’ and ‘obligation’, an odd-seeming equivalence exists between may not (‘non-permission’) and mustn’t (‘obligation-not-to’):

You may not go swimming today
  You mustn’t go swimming today

On the whole, the past tense negative auxiliaries (mightn’t, couldn’t, wouldn’t, shouldn’t) follow the same negative pattern as their present tense equivalents, subject to the provisions described in 3.48 ff.
The simple sentence 7.45

(1) those that expect only affirmation or rejection (as in Have you finished the book?) are YES-NO questions;
(2) those that expect a reply supplying an item of information (as in What is your name? How old are you?) are WH- questions;
(3) those that expect as the reply one of two or more options presented in the question are ALTERNATIVE questions, for example:

Would you like to go for a walk or stay at home?

7.45

Yes-no questions

Yes-no questions are usually formed by placing the operator before the subject and giving the sentence a rising intonation:

The boat has left—Has the boat left?

If there is no item in the verb phrase that can function as operator, do is introduced as with negation (7.33):

He likes Mary—Does he like Mary?

Again as with negation, lexical be acts as operator; in BrE this is often true for have also and informally got is added:

John was late—Was John late?

He has a car—Does he have a car? (esp AmE) [Has he (got) a car? (esp BrE)]

Note

By placing the nuclear stress in a particular part of a yes-no question, we are able to 'focus' the interrogation on a particular item of information which, unlike the rest of the sentence, is assumed to be unknown (cf focus of negation, 7.41). Thus the focus falls in different places in the following otherwise identical questions:

Was he a famous actor in those days?

('I know he was once a famous actor—but was it then or later?')

Was he a famous actor in those days?

('I know he was an actor in those days—but was he a famous one?')

7.46

Positive orientation

Another typical characteristic of yes-no questions is the use of the non-assertive forms any, ever, etc that we have already seen in operation in negative statements (7.35):

Someone called last night
I suppose some of the class will be already here

Did anyone call last night?
Do you suppose any of the class will be here yet?

7.47

Negative orientation

Like the use of the do auxiliary, non-assertive forms point to common ground between questions and negative statements. This ground is not hard to explain: clearly a question has neutral polarity, in the sense that it leaves open whether the answer is positive or negative. Hence questions, like negatives, belong to the class of 'non-assertions' (2.20).

On the other hand, a question may be presented in a form which is biased towards a positive or negative answer. A question has positive orientation, for example, if it uses assertive forms rather than the usual non-assertive forms:

Did someone call last night? ('Is it true that someone called last night?')
Has the boat left already?
Do you live somewhere near Dover?
Would you like some cake?

These questions indicate that the speaker thinks that the answer is yes: he merely asks for confirmation of that assumption.

7.47

Negative orientation

Negative orientation is found in questions which contain a negative form of one kind or another:

Can't you give us any hope of success? ('Is it really true that you can't...?') [1]
Isn't your car working? [2]
Does no one believe me? [3]

Negative orientation is complicated, however, by an element of surprise or disbelief which adds implications of positive meaning. Thus [2] means 'Is it really true that your car isn't working? I had assumed that it was.' Here there is a combining of a positive and a negative attitude, which one may distinguish as the OLD ASSUMPTION (positive) and NEW ASSUMPTION (negative). Because the old assumption tends to be identified with the speaker's hopes or wishes, negative-oriented questions often express disappointment or annoyance:

Can't you drive straight? ('I'd have thought you'd be able to, but apparently you can't')
Aren't you ashamed of yourself? ('You ought to be, but it appears you're not')
Hasn't the boat left yet? ('I'd hoped it would have left by now, but it seems that it hasn't')

A second type of negative question combines not (the formal signal of
negative orientation) with the assertive items which are the formal signals of positive orientation:

Didn’t someone call last night?
Hasn’t the boat left already?

Such questions are similar in effect to type [I] tag questions (7.48) and to statements showing disbelief: ‘Surely someone called last night!’

Tag questions
7.48
The tag question consists of operator plus pronoun, with or without a negative particle (10.29); the choice and tense of the operator are determined by the verb phrase in the superordinate clause:

The boat hasn’t left, has it?
Joan recognized you, didn’t she?

As these examples illustrate, if the superordinate clause is positive, the tag is negative, and vice versa. The nuclear tone of the tag occurs on the operator and is either a rise or a fall. Four main types of tag question emerge from the observance of these rules:

\[
\begin{array}{ll}
\text{RISING TONE} & \text{FALLING TONE} \\
[II] & [III] \\
\text{POSITIVE+NEGATIVE} & \text{NEGATIVE+POSITIVE} \\
\text{He likes his job,} & \text{He doesn’t like his job,} \\
\text{doesn’t he?} & \text{doesn’t he?}
\end{array}
\]

The meanings of these sentences, like their forms, involve a statement and a question: each of them, that is, asserts something then invites the listener’s response to it. Sentence [I], for example, can be rendered ‘I assume he likes his job; am I right?’. [II] means the opposite: ‘I assume he doesn’t like his job; am I right?’. Clearly, these sentences have a positive and a negative orientation respectively. A similar contrast exists between [III] and [IV]. But it is important, again, to separate two factors: an assumption (expressed by the statement) and an expectation (expressed by the question). On this principle, we may distinguish the four types as:

[II] Positive assumption + neutral expectation  
[III] Positive assumption + positive expectation  
[IV] Negative assumption + negative expectation

The tag with the falling tone, it will be noted, invites confirmation of the statement, and has the force of an exclamation rather than a genuine question. In this, it is like (though perhaps not so emphatic as) exclamatory yes-no questions with a falling tone (7.56): Isn’t that gorgeous weather!

7.49
Among less common types of tag question, one may be mentioned in which both statements and question are positive:

Your car is outside, is it?
You’ve had an accident, have you?

This tag always has a rising nucleus, and the situation is characteristically preceded by oh or so, indicating the speaker’s arrival at a conclusion by inference, or by recalling what has already been said. The tone may sometimes be one of sarcastic suspicion:

So that’s your little game, is it?

7.50
Declarative questions
The declarative question is an exceptional type of yes-no question identical in form to a statement, except for the final rising question intonation:

You’ve got the explosive?
They’ve spoken to the ambassador?
You realize what the risks are?
Boris will be the, I suppose?
He didn’t finish the race?

Notice the occurrence of I suppose, impossible in normal questions. Declarative questions show their assertive character in the inadmissibility of non-assertive forms:

The guests have had nothing to eat?
*The guests have had anything to eat?

They are similar in force to type [I] or type [II] tag questions, except for a rather casual tone, which suggests that the speaker takes the answer yes or no as a foregone conclusion.

7.51
Yes-no questions with modal auxiliaries
The formation of yes-no questions with modal auxiliaries is subject to certain limitations and shifts of meaning. The modals of ‘permission’ (may, esp BrE, and can) and of ‘obligation’ (must, esp BrE, and have to) involve
the speaker's authority in statements and the listener's authority in
questions:

A: {
  May
  Can
} I leave now? ('Will you permit me...')

b: Yes, you {
  may
  can
} ('I will permit you...')

A: {
  Must I
  Do I have to
} leave now? ('Are you telling me...')

b: Yes, you {
  must
  have to
} ('I am telling you...')

A similar switch from listener to speaker takes place with shall ('volition') which (especially in BrE) implicates the speaker's will in statements, but the listener's will in questions:

You shall suffer for this! ('I intend to make you suffer...')
Shall I switch off the television? ('Do you want me to...?')

The direct-question use of shall, however, is virtually restricted to first person subjects. With we, it has both exclusive and inclusive senses:

Shall we carry your suitcases? ('Would you like us to...?')
Shall we have dinner? ('Would you like us [including you] to...?')

May ('possibility') is not employed at all in questions; can (or more commonly, in AmE, could) takes its place:

A: {
  Can
  Could
} they have missed the bus? b: Yes, they {
  may have.
  might have.

Need (in BrE) is a non-assertive auxiliary in clauses where the corresponding positive form is must. Hence in questions:

A: Need it happen? (cf AmE/BrE: Does it {
  need to
  have to
} happen?)

b: Yes, it {
  must.
  has to.

If, on the other hand, must had occurred in A's question, it would have had 'positive orientation': 'Is it a fact that it must happen?' Compare Need it ever happen? with Must it always happen?, where the assertive form has to be retained.

7.53 Wh-questions

7.52 Wh-questions are formed with the aid of one of the following interrogative words (or Q-words): who/whom/whose, what, which when, where, how, why

As a rule,

(1) the Q-element (i.e. clause element containing the Q-words) generally comes first in the sentence;
(2) the Q-word itself takes first position in the Q-element.

The only exception is when the Q-word occurs in a prepositional complement. Here English provides a choice between two constructions, one formal and the other less so. In formal style, the preposition precedes the complement, whereas in colloquial style, the complement comes first and the preposition retains the position it has in a declarative sentence:

On what did you base your prediction? (formal)
What did you base your prediction on?

We may perhaps express this difference more neatly by saying that colloquial English insists that the Q-word comes first, while formal English insists that the Q-element as a whole comes first.

7.53 The following are sentences in which the Q-element operates in various clause functions:

Who opened my letter?  (Q-element: S)
Which books have you lent him?  (Q-element: Oa)
Whose beautiful antiques are these? (Q-element: Ca)
How wide did they make the bookcase?  (Q-element: Ca)
When will you come back?  (Q-element: Atime)
Where should I put the glass?  (Q-element: Aplace)
Why are they always complaining?  (Q-element: Areason)
How did you mend it?  (Q-element: Aprocess)
How much does he care?  (Q-element: Ainterest)
How long have you been waiting?  (Q-element: Aduration)
How often do you visit New York?  (Q-element: Afrequency)

As the examples indicate, falling intonation, not rising intonation, is usual for wh-questions.

We see above that normal statement order of elements is upset in wh-questions not only by the initial placing of the Q-element, but by the inversion of subject and operator in all cases except that in which the Q-element is subject, where the rule of initial Q-element takes precedence over the rule of inversion.

Subject-operator inversion is the same in its application to wh-questions
as in its application to yes-no questions; if there is no auxiliary in the equivalent statement, do is introduced as operator in the question. Lexical be (and sometimes, in BrE, have) acts as an operator: How are you? Who have we here?

Note

[a] Adjuncts of instrument, reason, and purpose are normally questioned by the prepositional constructions:

What shall I mend it with? What did you do that for?

Although the latter could be replaced by Why did you do that?, it has no alternative with a preposed preposition: *For what did you do that? In this respect it is like informal questions with be followed by a final preposition: What was it in? (but not *In what was it?).

[b] Abbreviated questions consisting of Q-word and final preposition (which in this construction bears nuclear stress), Where to? What for/with? Who with/why, are popular: colloquial speech as questions consist of the Q-word only: Where? Who? Why? There is a common abbreviated negative question Why not? (10.36).

c] Although there is no Q-word for the verb, the content of the predicate can be questioned by what as the object of the generalized agnostic verb do:

A: What are you doing? B: I’m reading.
A: What have you done with my book? B: I’ve hidden it.

[d] As indirect object cannot act as Q-element: Instead of *Who(m) did you give the present to? the equivalent prepositional complement construction is used: Who(m) did you give the present to? or To whom did you give the present?

Alternative questions

7.54

There are two types of alternative question, the first resembling a yes-no question, and the second a wh-question:

Would you like chocolate, vanilla, or strawberry (ice-cream) [1]

Which ice-cream would you like? Chocolate, vanilla, or strawberry? [2]

The first type differs from a yes-no question only in intonation; instead of the final rising tone, it contains a separate nucleus for each alternative: a rise occurs on each item in the list, except the last, on which there is a fall, indicating that the list is complete. The difference of intonation between alternative and yes-no questions is important, in that ignoring it can lead to misunderstanding – as the contrast between these replies indicates:

alternative: A: Shall we go by bus or train? B: By bus.

yes-no: A: Shall we go by bus or train? B: No, let’s take the car.

The second type of alternative question is really a compound of two separate questions: a wh-question followed by an elliptical alternative question of the first type. Thus [2] might be taken as a reduced version of:

Which ice-cream would you like? Would you like chocolate, vanilla, or strawberry?

Any positive yes-no question can be converted into an alternative question by adding or not or a matching negative clause:

yes-no: Are you coming?

alternative: Are you coming or not?

The alternative variant, by spelling out the negative aspect of the question, is rather petulant in tone, but is otherwise indistinguishable in meaning from the yes-no question.

7.55

The structure of alternative yes-no questions follows the pattern of clausal coordination (9.21 ff); that is, two or more separate questions are collapsed together, wherever convenient, by ellipsis (shown here by parentheses):

Did they win the World Cup or (did) Brazil win the World Cup?

Often the elliptical part of an alternative question is placed within the first question:

Did they win the World Cup or Brazil win the World Cup?

Where there is no repeated structure, no ellipsis is possible, and so the second question appears in its full form:

Is it raining or has it stopped?

Minor types of question

7.56

EXCLAMATORY QUESTION

The exclamatory question is a question in form, but is functionally like an exclamation (7.63). The most characteristic type is a negative yes-no question with a falling instead of rising tone:

Hasn’t she grown!

Wasn’t it a marvellous concert!

These invite the listener’s agreement to something on which the speaker has strongly positive feelings.

A positive yes-no question, also with a falling tone, is another (but very informal) way of expressing a strong positive conviction:

I am I hungry! I didn’t look annoyed! I have I grown!

Both operator and subject usually receive emphatic stress.
7.57
Rhetorical question
The rhetorical question is one which functions as a forceful statement. More precisely, a positive rhetorical question is like a strong negative assertion, while a negative question is like a strong positive one.

Positive:
Is that a reason for despair? ('Surely that is not a reason . . .')
Can anyone doubt the wisdom of this action? ('Surely no one can doubt . . .')

Negative:
Is no one going to defend me? ('Surely someone is going to defend me')

Unlike exclamatory questions, these rhetorical questions usually have the normal rising intonation of a yes-no question.

There is also a rhetorical wh-question, which is equivalent to a statement in which the Q-element is replaced by a negative element:

Who knows? ('Nobody knows')
What difference does it make? ('It makes no difference')

Again, the intonation is that of an ordinary wh-question, except that a rise-fall tone is likely.

Commands
7.58
Commands without a subject
We begin with the most common category of command, that which differs from a statement in that

(1) it has no subject,
(2) it has an imperative finite verb (the base form of the verb, without endings for number or tense).

Otherwise, the clause patterns of commands show the same range and ordering of elements as statements; for example:

SV: Jump (V)
SVC: Be reasonable (V C)
SVOA: Put it on the table (V O A place)

The imperative verb, however, is severely restricted as to tense, aspect, voice, and modality. There is no tense distinction or perfect aspect, and only very rarely does the progressive form occur:

Be preparing the dinner when he comes in

7.59 Commands with a subject
A passive is equally rare, except when the auxiliary is some verb other than be, as in Get washed. These restrictions are connected with the understandable incongruity of combining an imperative with a stative non-agentive verb: *Sound louder! Modal auxiliaries do not occur at all in imperative sentences.

Commands are apt to sound abrupt unless toned down by markers of politeness such as please: Please eat up your dinner; Shut the door, please. Even this only achieves a minimum degree of ceremony; a more tactful form of request can only be arrived at if one changes the command into a question or a statement: Will you shut the door, please? I wonder if you would kindly shut the door; I wonder whether you would mind shutting the door; etc.

Note
Stative verbs can be interpreted as dynamic, however, in special contexts: Know the answer by tomorrow! (= 'Get to know . . .'; 'Learn . . .'.)

7.59
Commands with a subject
It is implied in the meaning of a command that the omitted subject of the imperative verb is the 2nd person pronoun you. This is confirmed by the occurrence of you as subject of a following tag question (Be quiet, will you), and by the occurrence of yourself and of no other reflexive pronoun as object: Behave yourself, not *Behave himself.

There is, however, a type of command in which the subject you is retained, differing from the subject of a finite verb in always carrying stress:

You be quiet!
You mind your own business, and leave this to me!

These commands are usually admonitory in tone, and frequently express strong irritation. As such, they cannot naturally be combined with markers of politeness, such as please: *Please, you be quiet! They may be used, however, in another way, to single out (by pointing) two or more distinct addresses: You come here, Jack, and you go over there, Mary. A 3rd person subject is also possible:

Somebody open this door:
Everybody shut their eyes
Jack and Susan stand over there

It is easy to confuse the subject, in these commands, with a vocative noun phrase (7.31). Whereas the subject always precedes the verb, the vocative (as we saw earlier) is an element that can occur in final and medial, as well as initial, positions in the sentence. Another difference is that the vocative, when initially placed, has a separate tone-unit (typically fall-rise); the subject merely receives ordinary word-stress:
VOcATIVE: MARY, play on my side
SUBJECT: Mary play on my side

The distinctness of vocative and imperative subject is confirmed by the possibility of their co-occurrence: JOHN, 'you listen to ME!

7.60
Commands with let
First person imperatives can be formed by preposing the verb let, followed by a subject in (where relevant) the objective case:

Let us all work hard (more usually: Let's . . .)
Let me have a look

The same applies to 3rd person subjects:

Let each man decide for himself
If anyone shrinks from this action, let him speak now

7.61
Negative commands
To negate 2nd and 3rd person imperatives, one simply adds an initial Don't, replacing assertivey by non-assertive forms where necessary:

Open some windows ~ Don't open any windows
You open the door ~ Don't you open the door
Someone open the door ~ Don't anyone open the door

1st person imperatives, on the other hand, have two possibilities:

Let's open the door ~ Let's not open the door
Don't let's open the door (informal and esp. BrE)

and the second of these is available for 3rd person imperatives:

Don't let anyone fool himself that he can get away with it

7.62
Persuasive imperatives
A persuasive or insistent imperative is created by the addition of do (with a nuclear tone) before the main verb:

Do have some more sherry Do let's go to the theatre

Note
[a] Do, like don't and let's, acts as an introductory imperative marker, and is not identical with the emphatic do of statements (14.35). To see this, notice that neither do nor don't in commands fulfills the conditions of the do construction in questions and negations; they are not introduced to make good the lack of an operator and can indeed be used with the verb be: Do be seated; Don't be silly. (Contrast the unacceptability of *He doesn't be silly! This peculiarity of imperative do is also found in the quasi-imperative Why don't you construction: Why don't you be careful?
[b] Do, don't, and let's are used in isolation as elliptical commands:

A: Shall I open the door?  B: Yes, do.
   (No, don't.
A: Shall we watch the game?  B: Yes, let's.

7.63
Exclamations
In discussing exclamations as a formal category of sentence (but cf 7.56), we restrict our attention to exclamatory utterances introduced by what (plus noun phrase) or how. These express an extreme degree of some variable factor (How beautiful!), but the variable may be left implicit. Thus What a book! could refer to a very bad or to a very good book.

Exclamations resemble wh-questions in involving the initial placement of an exclamatory wh-element (the X-element). The syntactic order is therefore upset to the extent that the X-element (which may be object, complement, or adverbial, as well as subject) may be taken from its usual (statement) position and put into a position of initial prominence. On the other hand, in contrast to wh-questions, there is generally no subject-operator inversion:

X elemeut as subject: What an enormous crowd came! (S V)
X-element as object: What a time we've had today! (O, S V A)
X-element as complement: How delightful her manners are! (C, S V)

X-element as adverbial: How I used to hate geography! (A S V O,)
What a long time it lasted! (A S V)

The X-element, like the Q-element of the wh-question, can also act as prepositional complement, the preposition normally being postponed:

What a mess we're in!

7.64
Formulae

There are some sentences which, though appearing to belong to one of the major classes, in fact enter into few of the relations of substitutability that are common to members of those classes. For instance, the greeting formula (appropriate to a first meeting) How do you do? cannot be subordinated as an indirect question (*They asked him how he did) or answered in a corresponding statement form (*I do very well). Two slightly less restricted kinds of wh-question are the question without an auxiliary why (+ not) + predication:

Why get so upset? Why not enjoy yourself?
and the how/what about type of question:

What about the house?  How about joining us?

These are not formulaic in the previous sense, but are irregular in that they lack some of the elements normally found in a wh-question.

There are also patterns which are defective in terms of regular clause or sentence structure, such as the verbless imperatives:

Off with the lid!  Cut with it!  Down with the bosses!

To this we may add a number of exclamatory types:

If only I'd listened to my parents!  (with modal past: 3.47, 11.48)
To think I was once a millionaire!
Oh for a drink!  Oh to be free!  (archaic except when jocular)
You and your statistics!  John and his ideas!
Now for some fun!

Apart from such cases, there are sentences which contain fossilized elements no longer productively used in present-day English: for example, the subjunctive combined with inversion in:

Far be it from me to (spoil the fun)
Suffice it to say (we lost)
Long live (anarchy)!

and without inversion in:

God save the Queen!  (God) Bless you!

A slightly less archaic formula for expressing a wish is may+subject+predication: May the best man win!  May you be happy!

Note
In very familiar style we find the question formula How come (you missed the bus)?
Also familiar is the greeting formula How goes it?, without do- periphrasis.

7.65 Aphoristic sentences
Among other minor sentence types is the aphoristic sentence structure found in many proverbs:

The more, the merrier
Least said, soonest mended
Handsome is as handsome does
Easy come, easy go

These all have one structural feature in common: the balancing of two

7.66 Block language

In addition to the formulae of colloquial conversation, there is a whole realm of usage where, because of its rudimentary communicative role, language is structured in terms of single words and phrases, rather than in terms of the more highly organized units of clause and sentence.

Language so used may be termed 'block language'. It appears in such functions as labels, titles, headings, notices, and advertisements. Simple block-language messages most often consist of a noun or noun phrase or nominal clause in isolation; no verb is needed, because all else necessary to the understanding of the message is furnished by context. Examples are:

<table>
<thead>
<tr>
<th>ENTRANCE</th>
<th>ENGLISH DEPARTMENT</th>
<th>DANGER: FALLING ROCKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>PURE LEMON JUICE</td>
<td>FRESH TODAY</td>
<td>HIGHLY RECOMMENDED</td>
</tr>
<tr>
<td>A GRAMMAR OF CONTEMPORARY ENGLISH</td>
<td>WHERE TO GO 'IN LONDON'</td>
<td></td>
</tr>
<tr>
<td>HOW TO WIN FRIENDS AND INFLUENCE PEOPLE</td>
<td>THE FIRST LUXURY BOUND COLLECTOR'S EDITION OF AGATHA CHRISTIE'S WORK TO BE AVAILABLE IN THIS COUNTRY</td>
<td></td>
</tr>
</tbody>
</table>

In newspaper headlines, abbreviated clause structures have been developed:

(1) FILM-STAR MARRIES EX-PRIEST  (S V O₁)
(2) ELECTION A LANDSLIDE FOR SOCIALISTS  (S C₀)
(3) NIXON TO MEET ASIAN PREMIERS  (S V O₁)
(4) SHARE PRICES NOW HIGHER THAN EVER  (S A C₀)
(5) JACKLIN BEATEN BY BONALLACK  (S V A)
(6) CHANCES OF MIDDLE-EAST PEACE IMPROVING  (S V)

These differ from orthodox clause structures in having different tense conventions, and in omitting closed-system words of low information value, such as the articles and the finite forms of the verb be.

Note
Prohibitions on notice boards often assume the special block-language form of a noun phrase introduced by No. For example, No smoking; No entry; No unauthorized entry after dark.
Bibliographical note
On clause elements, see Anderson (1971); Fillmore (1968); Halliday (1967-8); Huddleston (1971); Lyons (1968), especially Chapter 8. On negation, see Klima (1964). On questions, see Bolinger (1957); Malone (1967). On commands, see Bolinger (1967a); Thorne (1969).

EIGHT
ADJUNCTS, DISJUNCTS, CONJUNCTS

8.1
Units realizing adverbial functions
The functions of the adverbials are realized by:

(1) Adverb phrases, *te phrases with adverbs as head or sole realization:
    Peter was playing *as well as he could
    We’ll stay *there

(2) Noun phrases (less common):
    Peter was playing *last week

(3) Prepositional phrases:
    Peter was playing *with great skill

(4) Finite verb clauses:
    Peter was playing *although he was very tired

(5) Non-finite verb clauses, in which the verb is
    (a) infinitive:
        Peter was playing *to win
    (b) -ing participle:
        *Wishing to encourage him, they praised Tom
    (c) -ed participle:
        *If urged by our friends, we’ll stay

(6) Verbless clauses:
    Peter was playing, *unaware of the danger

8.2
Classes of adverbials: adjuncts, disjuncts, conjuncts
Adverbials may be integrated to some extent into the structure of the
clause or they may be peripheral to it. If integrated, they are termed adjunctions. If peripheral, they are termed disjuncts and conjuncts, the distinction between the two being that conjuncts have primarily a connective function.

An adverbial is integrated to some extent in clause structure if it is affected by such clausal processes as negation and interrogation. For example, it is an adjunct if either (1) it cannot appear initially in a negative declarative clause:

* Quickly they didn't leave for home

or (2) it can be the focus of a question or of clause negation:

Does he write to his parents because he wants to (or does he write to them because he needs money)?

We didn't go to Chicago on Monday, (but we did go there on Tuesday)

In contrast, a disjunct or a conjunct is not affected by either of these clausal processes. For example, the disjunct to my regret can appear initially in a negative declarative clause:

To my regret, they didn't leave for home

and cannot be the focus of a question or of clause negation:

* Does he write to his parents, to my regret, (or does he write to them, to my relief)?

* We didn't go to Chicago, to my regret, (but we did go there, to my relief)

Items can belong to more than one class. For example, naturally is an adjunct in

They aren't walking naturally ('in a natural manner')

and a disjunct in

Naturally, they are walking ('of course')

8.3 Definitions of positional terms
We distinguish four positions of adverbials for the declarative form of the clause:

Initial position (ie before the subject)

Medial position:

M1: (a) immediately before the first auxiliary or lexical be, or (b) between two auxiliaries or an auxiliary and lexical be.

M2: (a) immediately before the lexical verb, or (b) in the case of lexical be: before the complement.

Final position: (a) after an intransitive verb, or (b) after any object or complement.

If there are no auxiliaries present, M1 and M2 positions are neutralized:

They sometimes watch television

If the subject is ellipted, initial and medial positions are neutralized:

I've been waiting outside his door the whole day and yet haven't seen him

Final position includes any position after the stated clause elements, eg:

I paid immediately for the book
I paid for the book immediately

Adjuncts
8.4 Syntactic features of adjuncts
Certain syntactic features are general to adjuncts.

(1) They can come within the scope of predication pro-forms or predication ellipsis (10.29 ff). For example, in

John greatly admires Bob, and so does Mary

the pro-form in the second clause includes the adjunct of the first clause, so that the sentence means the same as

John greatly admires Bob, and Mary greatly admires Bob

(2) They can be the focus of limiter adverbials such as only (8.8 ff):

They only want the car for an hour ('for an hour and not for longer')

(3) They can be the focus of additive adverbials such as also (8.8 ff):

They will also meet afterwards ('afterwards in addition to some other time')

(4) They can be the focus of a cleft sentence (14.15 ff):

It was when we were in Paris that I first saw John

8.5 Adverb phrases as adjuncts
Adverb phrases as adjuncts can often

(1) constitute a comparative construction

John writes more clearly than his brother does
(2) have premodifying *however* to form the opening of a dependent adverbial clause:

*However strongly* you feel about it, you should be careful what you say

(3) have premodifying *how*, a pro-form for intensifiers in questions or exclamations:

*How often* does she wash her hair?
*How cautiously* he drives!

(4) have premodifying *so* followed by subject-operator inversion and a correlative clause:

*So monotonously* did he speak that everyone left

**8.6 Subclassification of adjuncts**

It is convenient to discuss adjuncts under classes that are essentially semantic. Fig 8.1 gives the classes and their subclasses.

![Diagram of Adjunct Subclasses]

**8.7 Viewpoint adjuncts**

Viewpoint adjuncts can be roughly paraphrased by ‘if we consider what we are saying from a [adjective phrase] point of view’ or ‘if we consider what we are saying from the point of view of [noun phrase]’.

Adverbs functioning as viewpoint adjuncts are most commonly derived from adjectives by the addition of a -ly suffix:

- Geographically, ethnically, and linguistically, these islands are closer to the mainland than to their neighbouring islands.

To tap a private telephone line is not technically a very difficult operation.

Viewpoint adjuncts derived from nouns by the addition of the suffix -wise (especially AmE) are considered informal:

- Programme wise, the viewing on TV last night was the first instalment of a new science series.

All -ly viewpoint adjuncts have a corresponding participle clause with *speaking*, *eg: visually ~ visually speaking*, and a corresponding prepositional phrase with the frame from a [adjective phrase] point of view, eg: *morally ~ from a moral point of view*. Other examples of viewpoint adjuncts:

- Many of these people have suffered, *economically speaking*, because of their political affiliations.
- *As far as mathematics is concerned*, he was a complete failure.
- *Looked at politically*, it was not an easy problem.

Viewpoint adjuncts, whatever their structure, are usually in initial position.

**8.8 Focusing adjuncts**

Focusing adjuncts indicate that what is being communicated is limited to a part that is focused - **limiter adjuncts** - or that a focused part is an addition - **additive adjuncts**. Most focusing adjuncts are adverbs.

**Limiters**

(a) **exclusives** restrict what is said to the part focused *eg: alone, just, merely, only, purely, simply*

(b) **particularizers** restrict what is said particularly or mainly to the part focused *eg: chiefly, especially, mainly, mostly; in particular*

**Additives**

*also, either, even, neither, nor, too; as well as, in addition*
Examples of their use with an indication of the part that is focused:

You can get a B grade just for that answer

The workers, in particular, are dissatisfied with the government

We bought some beer as well.

Focusing adjuncts cannot be modified: *very only, *extremely also.
Most of them cannot be coordinated: *just and exactly, *equally and likewise. But we have one cliché coordination:

He is doing it purely and simply for your benefit

Position and focus

Sentences such as

John only phoned Mary today

John also phoned Mary today

are ambiguous, the meaning varying with the intonation we give the sentence. In more formal English varying positions can distinguish most of the meanings, with a nucleus on the focused part in speech:

[John only] [phoned Mary today] = Only John phoned Mary today
(Nobody but John phoned Mary today)

[John only] [phoned Mary today] = John only phoned Mary today
(John phoned Mary today but nobody else)

[John only] [phoned Mary today] = John phoned Mary only today
(John phoned Mary today but not at any other time)

[John also] [phoned Mary today] = John also phoned Mary today
(John as well as somebody else phoned Mary today)

[John also] [phoned Mary today] = John phoned also Mary today
(John phoned Mary as well as somebody else today)

[John also] [phoned Mary today] = John phoned Mary also today also
(John phoned Mary today as well as at some other time(s))

In speech, a nucleus on the lexical verb gives an unambiguous interpretation when only and also are before the lexical verb:

[John only phoned Mary today] (John did nothing else with respect to Mary but phone her)

[John also phoned Mary today] (John phoned Mary today in addition to something else he did with respect to Mary today)

But in the written form, this position remains ambiguous, since (for example) only can have as its focus phoned (did nothing else but phone), Mary (phoned nobody but Mary), or today (on no other day). However, in practice the context usually makes it clear which interpretation is required.

Positions of focusing adjuncts

Most limiters can either precede or follow the part on which they are focused, though it is more usual for them to precede. Just, merely, purely, and simply must normally precede:

You can get a B grade just/merely/purely/simply for that answer

On the other hand, alone must normally follow the part on which it is focused, eg: You can get a B grade for that answer alone.

The following additives normally precede a focused part in the predicate but follow a focused subject: again, also, equally, similarly, in addition. On the other hand, too and as well normally follow a focused part, wherever in the clause it may be, while even normally precedes:

I know your family has expressed its support. We too/as well will do what we can for you.

Yesterday the Robinsons were here with their new baby. They brought their other children too/as well.

My father won’t give me the money. He won’t even lend it to me.

Neither and nor are restricted to initial position and non-assertive either (7.35) to final position:

They won’t help him, but neither/nor will they harm him

They won’t help him, but they won’t harm him either

Focusing adjuncts in correlative constructions and cleft sentences

With certain limiters – just, simply, and most commonly only and merely – there can be subject-operator inversion when they follow an initial not in a correlative construction. Besides the normal

He not only protested: he (also) refused to pay his taxes

we can also have

Not only did he protest: he (also) refused to pay his taxes

The focus can be on the subject or predicate or on some part of either of them. The second correlative clause, which often has (but also), may be
implied rather than expressed. *Not only* (and less commonly *not* plus one of the other limiters) can appear initially in this construction without subject-operator inversion, with focus on the subject:

*Not only* he protested: . . .

In a non-correlative construction, *not even* can also occur initially, but only with normal subject-verb order. The focus is on the subject:

*Not even* John protested

If the focus of *even* is to be on the predication (or part of it), *not even* must follow the operator:

John may *not even have been protesting*

Focusing adjuncts can appear within the focal clause of a cleft sentence:

It was *only* also John who protested

We should distinguish the cleft sentence from the correlative structure which it resembles but from which it differs prosodically:

It was *not* that John protested; it was *merely* that he was rude. It’s *not just* that he’s young; it’s *surely* that he’s inexperienced

The adverbials are here functioning within the superordinate clauses in which the *that*-clauses are complement. Limiters, additives and some disjuncts (e.g. *possibly, probably*) occur in this correlative structure.

**Intensifiers**

8.12

Intensifiers can be divided into three semantic classes: emhasizers, amplifiers, downtoners. Intensifiers are not limited to indicating an increase in intensity; they indicate a point on the intensity scale which may be high or low. Emphasizers have a general heightening effect; amplifiers scale upwards from an assumed norm; downtoners have a lowering effect, usually scaling downwards from an assumed norm. The three classes are shown with their subclasses:

| EMPHASIZERS (e.g. *definitely*) |
| AMPLIFIERS |
| maximizers (e.g. *completely*) |
| boosters (e.g. *very much*) |
| compromisers (e.g. *kind of*) |
| diminishers (e.g. *partly*) |
| minimizers (e.g. *hardly*) |
| approximators (e.g. *almost*) |

**8.14 Amplifiers**

Most of the common intensifiers are adverbs, but there are also some noun phrases and a few prepositional phrases.

**8.13 Emphasizers**

Common emphazizers include:

[A] actually, certainly, clearly, definitely, indeed, obviously, plainly, really, surely, for certain, for sure, of course

[B] frankly, honestly, literally, simply, fairly (BrE), just

Examples of the use of emphazizers:

I *honestly* don’t know what he wants
He *actually* sat next to her
I *just* can’t understand it
They *literally* tore his arguments to pieces
I *simply* don’t believe it

While emphazizers in Group A seem to be free to co-occur with any verb or predication, those in Group B tend to be restricted. For example, *honestly* tends to co-occur with verbs expressing attitude or cognition:

They *honestly* admire her courage
He *honestly* believes their accusation

Most emphazizers normally preceede the item they emphasize (medial positions for verb phrases) but for certain and for sure are exceptional in being postposed.

**Note**

[a] Certain emphazizers appear in restricted environments:

1. *always* when preceded by *can or could* in a positive declarative clause:
   *You can always* sleep on the floor (*You can certainly . . . *)

2. *well* when preceded by *can, could, may, or might* in a positive declarative clause:
   *It may well* be true that he beat her
   (*It may indeed be true . . . *)

[b] *Indeed* can be postposed:

I appreciate your help *Indeed*

This is more common after a complement of *be* which is realized by an adjective (particularly if modified by another intensifier) or a degree noun:

He was very tired *Indeed* (*He was extremely tired*)
It was a sacrifice *Indeed* (*It was a great sacrifice*)
8.15 Co-occurrence restrictions on amplifiers

8.15 CO-OCCURRENCE RESTRICTIONS ON AMPLIFIERS

Amplifiers co-occur only with gradable verbs, whereas emphasis can co-occur with non-gradable verbs such as drink or judge:

He really drinks beer
He will definitely judge us

When amplifiers co-occur with non-gradable verbs they function as other types of adjunct:

He drank his beer a lot (’often’)
He will judge us severely (’in a severe manner’)

However, a non-gradable verb can become gradable when the main concern is with the result of a process. For example, if the perfective particle up is added to drink or the perfective aspect of the verb is used, we can add an amplifier such as completely:

He completely drank up his beer
He has completely drunk his beer

Similarly, while judge is non-gradable, misjudge is gradable, since the latter is concerned with the result of the judging:

He badly judged the situation
He badly misjudged the situation

Certain amplifiers tend to co-occur predominantly with certain verbs for example:

entirely + agree
badly + need, want
completely + forget
greatly + admire, enjoy

Amplifiers may occur with a semantic class of verbs, for example greatly with verbs having a favourable implication and utterly with verbs having an unfavourable implication. Some, such as deeply, occur with the class of ‘emotive’ verbs:

They wounded him deeply (emotional wounding)
They wounded him badly (physical wounding)

Note

[a] If badly is used with judge, it is interpreted as a process adjunct (perhaps expressing a blend of process with result) and must be put in final position:
He judged the situation badly ('in a way that was bad and with bad results').
The gradable/non-gradable distinction between judge and misjudge is found in other morphologically related verbs, eg:

**NON-GRADABLE:** calculate, estimate, rate, represent, behave, manage

**GRADABLE:** misjudge, date, overestimate, underestimate, overrate, underrate, misrepresent, misbehave, mismanage

Much is largely used as a non-assertive (7.35), unless premodified or in the compared forms. With some attitudinal verbs, unpremodified much can be used, but only in M2 position (8.3):

We would have much preferred/appreciated her taking that position
They will much admire/regret your methods

**Downtoners**

8.16

Downtoners have a lowering effect on the force of the verb. They can be divided into four groups:

- **COMPROMISERS** have only a slight lowering effect
- **DIMINISHERS** scale downwards considerably
- **MINIMIZERS** serve to express an approximation to the force of the verb
- **APPROXIMATORS** serve to express an approximation to the force of the verb

**COMPROMISERS**

kind of, sort of (informal, esp AmE), quite/rather (esp BrE), more or less
eg I kind of like him (informal, esp AmE)
I quite enjoyed the party, but I've been to better ones (esp BrE)

**DIMINISHERS**

partly, slightly, somewhat in part, to some extent; a little
eg The incident somewhat influenced his actions in later life
We know them slightly

**MINIMIZERS**

a bit; negatives (7.36): barely, hardly, little, scarcely; non-assertives (7.35): in the least, in the slightest, at all
eg I didn't enjoy it in the least
A: Do you like her? B: A bit.

**APPROXIMATORS**

almost, nearly, as good as, all but
eg I almost resigned

Noun phrases are quite common as non-assertive minimizers, eg: 'I didn't sleep a wink last night'; 'I don't owe you a thing'.

---

Most downtoners favour M2 position (8.3) but can also occur finally, eg: 'He more or less agrees with you', 'He agrees with you more or less'. Some are restricted to M2: quite, rather, as good as, all but; eg 'I quite like him'. Others tend to be restricted either to M2 or to M1(b), the position between two auxiliaries: barely, hardly, scarcely, practically, virtually, hence we may have 'He could hardly be described as an expert'.

A few are restricted to M2 in a positive clause, but can precede a negative phrase in M1: kind of, sort of, almost, nearly; eg 'I almost didn't meet him'. A few others favour final position - a bit, at all - or are restricted to it - enough, a little; eg 'I didn't enjoy it at all', 'He hasn't worked enough'. A few can appear initially: in part, in some respects, to some extent; eg 'To some extent he prefers working at home'.

8.17

Approximators imply a denial of the truth-value of what is denoted by the verb. Hence we can say, with the approximator almost:

I almost resigned, but in fact I didn't resign

The negative minimizers partially deny the truth-value of what is said:

I can scarcely ignore his views; in fact I can't ignore his views

The second clause converts the partial denial in the first clause into a full denial.
Compromisers reduce the force of the verb. If we say

I kind of like him (informal, esp AmE)

we do not deny liking him, but we seem to be depreciating what we are saying, 'I might go as far as to say I like him'.

Diministers are not usually the focus of negation, but when they are, the effect is to push the scaling towards the top:

They didn't praise him slightly ('They praised him a lot')

On the other hand, the effect of negation on those minimizers that accept negation is to deny the truth-value of what is denoted by the verb:

We don't like it a bit ('We don't like it')

Four of the minimizers - barely, hardly, little, scarcely - are themselves negative and cannot be negated.

Note

Certain minimizers appear in restricted environments:

(1) possibly and conceivably when they co-occur with can or could in a non-assertive clause:

They can't possibly/conceivably leave now ('They can't under any circumstances leave now')
8.20 Manner adjuncts

Since the passive is often used when the need is felt to focus attention on the verb, process adjuncts are commonly placed in M2 position (8.3) rather than finally when the verb is in the passive:

Tear gas was indiscriminately sprayed on the protesters

Process adjuncts realized by units other than adverb phrases often occur initially, that position being preferred if the focus of information is required on another part of the sentence:

By pressing this button you can stop the machine

8.20 Manner adjuncts

Examples of the use of manner adjuncts:

They sprayed tear gas indiscriminately on the protesters
She replied to questions with great courtesy
He spoke in a way that reminded me of his father
He always writes in a carefree manner
They walked (in) single file
You should write as I tell you to

Manner adjuncts are realized mostly by adverb phrases and prepositional phrases (6.31), but also by noun phrases and clauses (11.33).

Noun phrases with way, manner, and style as head tend to have the definite article:

She cooks chicken in the way I like

As the above example illustrates, we can regard such noun phrases as having omitted the preposition in (cf 6.25 f, 8.21).

An adverb manner adjunct can usually be paraphrased by in a... manner or in a... way with its adjective base in the vacated position.

Where an adverb form exists, it is usually preferred over the corresponding prepositional phrase with manner or way. Hence, 'He always writes carelessly' is more usual than 'He always writes in a careless manner/way'.

Adverbs as heads of manner phrase adjuncts are an open class. The main method of forming manner adverbs is by adding a -ly suffix to an adjective. Three minor methods are by adding -wise, -style, or -fashion to a noun, eg: snake-wise, cowboy-style, peasant-fashion. With these forms the prepositional paraphrase would include postmodification: in the manner of a snake, in the style of cowboys, in the fashion of peasants.
Note
Some adjectives express a blend of manner with some other meaning.
(1) Manner with result and intensification:
   The soldiers wounded him badly ("in such a way that it resulted in his being in a bad condition");
(2) Manner with time duration:
   He was walking slowly ("in such a way that each step took a long time")
   Such items are more fully time adverbs when they appear initially or medially:
      Suddenly, I felt free again ("it suddenly happened")
   My brother quickly despised his school ("My brother soon came to despise")
(3) Manner with time when:
   Put it together again ("in the way that it was before")

8.21 Means and instrument adjectives
Examples of the use of means adjectives:
   He decided to treat the patient surgically
   I go to school by car
   He gained entry into the building by means of a bribe to the guard

Examples of the use of instrument adjectives:
   He examined the specimen microscopically
   You can cut the bread with that knife
   The injured horse was humanely killed with a rifle bullet

Most means and instrument adjectives are prepositional phrases (6.31f), but some are adverb phrases and others are noun phrases without an article. We can consider the noun phrases as related to prepositional phrases (8.20):
   He sent it (by) air mail
   Fly (with, by) Air France
   He travelled to Washington (by) first class

Note
Adverbs as means and instrument adjectives cannot be modified. Hence, microscopically in "He examined the specimen very microscopically" can only be a manner adverb ("in microscopic detail"), although without the premodifier very it can be a means or instrument adverb ("by means of a microscope" or "with a microscope").

Subject adjectives
8.22 Subject adjectives relate to the referent of the subject in an active clause (or the agent in a passive clause) as well as to the process or state denoted by the verb. All are either adverb or prepositional phrases. Three groups can be distinguished: general, volitional, and formulaic. The last group will be separately discussed in 8.23.

General subject adjectives:
   Resentfully, the workers have stood by their leaders ("The workers have stood by their leaders and were resentful about it")
   With great unease, they elected him as their leader ("They were very uneasy when they . . .")

Volitional subject adjectives:
   He left his proposals vague on purpose ("It was his purpose to . . .")
   He deliberately misled us ("He was being deliberate when he . . .")

Common volitional subject adjectives: deliberately, (un)intentionally, purposely, reluctantly, voluntarily, wilfully, (un)willingly, on purpose, with reluctance

The subject adjectives show their relationship to the subject by the preposition they allow. For example, we must provide a different preposition for the subject adjectives bitterly from its homonyms as manner adverb and booster intensifier:
   Bitterly, he buried his children ("He was bitter when he . . .")
   He spoke bitterly about their attitude ("He spoke in a bitter way . . .")
   He bitterly regretted their departure ("He very much regretted . . .")

Volitional subject adjectives differ from other subject adjectives in that:
1) they express the subject's intention or willingness, or the reverse
2) they can often occur with intensive verbs:
   He is deliberately being a nuisance
3) they can more easily appear before clause negation:
   Intentionally, he didn't write to them about it

Subject adjectives require an animate subject:
   Joan resentfully packed their luggage
*The water resentfully boiled

However, in the passive form it is the agent (whether present or not) that must be animate:
   Their luggage was resentfully packed (by Joan)

Subject adjectives tend to occur initially or medially, but M2 position (8.3) is probably preferred.
224 Adjuncts, disjuncts, conjuncts 8.23

8.23
Formulaic adjuncts
Except for please, formulaic adjuncts tend to be restricted to M2 position (8.3). They are a small group of adverbs used as markers of courtesy. All except please are modifiable by very. The most common are exemplified below:

He kindly offered me a ride ('He was kind enough to . . .')
We cordially invite you to our party ('We express our cordiality to you by inviting . . .')
She announced that she will graciously consent to our request ('. . . she will be gracious enough to . . .')
He humbly offered his apologies ('He was humble enough to offer . . .')
Take a seat please ('Please me by taking . . .')

Kindly and please are the only formulaic adjuncts to appear freely before imperatives. Kindly is restricted to initial position in imperatives:

Kindly leave the room

Please, however, is mobile:

Please leave the room

Open the door please

Unlike the other formulaic adjuncts, please is normally limited to sentences having the function of a command, or containing a reported command, or constituting a request:

Will you please leave the room?
You will please leave the room
I wonder whether you would mind leaving the room please
I asked him whether he would please leave the room
May I please have my book back?

Please and (to a lesser extent) kindly are very commonly used to tone down the abruptness of a command.

Place adjuncts
8.24
Place adjuncts denote static position and also direction, movement, and passage, here brought together under the general term 'direction'. Most place adjuncts are prepositional phrases (6.7 ff), but clauses (11.22), adverb phrases and noun phrases are frequently used:

He lives in a small village
The church was built where there had once been an office block
They are not there
She works a long way from here

8.25 Co-occurrence restrictions on place adjuncts

He ran past the sentry
They followed him wherever he went
I took the papers from the desk
direction
He threw it ten yards

Position adjuncts can normally be evoked as a response to a where question:

A: Where is he staying? B: In a hotel.
The appropriate question for direction adjuncts is where plus the relevant directional particle, except that for 'direction towards' the particle to is commonly omitted:

A: Where are you going (to)? B: To the park.
A: Where have you come from? B: From the supermarket.

Adverbs commonly used for both position and direction: above, along, anywhere, around, away, back, below, by, down, east (and other compass points), elsewhere, everywhere, far, here, home, in, locally, near, off, opposite, out, over, past, round, somewhere, there, through, under, up, within.

A few adverbs denote direction only: aside, backward(s), downward(s), forward(s), inward(s), left, outward(s), right, sideways, upward(s).

Where in its various uses is a place adjunct; here and there are proforms for place adjuncts.

Note
[e] For here, above, and below as signals in discourse reference, see 10.38.
[f] Anywhere and (normally) far are non-assertive (7.35).

8.25 Co-occurrence restrictions on place adjuncts

Direction adjuncts are used only with verbs of motion or with other dy-namic verbs (3.35) that allow a directional meaning:

He jumped over the fence
She was whispering softly into the microphone

On the other hand, position adjuncts can be used with most verbs, including stative verbs (3.35). Position adjuncts are used as predicative adjuncts with the intensive verb be:

Your sister is in the next room
The house you want is on the other side of the street

Some direction adjuncts are also used with be, but with a resultative meaning, indicating the state of having reached the destination (6.8).
Some place adjuncts are obligatory, providing verb complementation to verbs other than be:

- We don’t live here
- I’ll get below
- They put the cat out
- You should set that dish in the middle

Place adjuncts are used also non-literally in phrasal verbs (12.2f):

- The light is on (‘is shining’)
- When John heard what happened, he blew up (‘became very angry’)
- They turned down the suggestion (‘rejected’)

*Up, in particular, is used as an intensifier or perfectly:

- You must drink up quickly (‘finish drinking’)
- They closed up the factory (‘closed completely’)

For the transferred or abstract use of place prepositions, see 6.20.

8.26 Position and direction adjuncts in the same clause
Position and direction adjuncts can co-occur, with the position adjunct normally following the direction adjunct in final position:

- The children are running around (A₁) upstairs (A₂)

The position adjunct can be put in initially to avoid giving it end-focus (14.11):

- Upstairs the children are running around

A prepositional phrase may be put in that position, as in

- In the park some of the children are walking to the lake
to prevent it from being interpreted as a postmodifier of a previous noun phrase. There are other ways of avoiding such an interpretation, e.g:

- Some of the children are in the park and walking to the lake

Two position adjuncts or two direction adjuncts can be coordinated:

- We can wait for you here or in the car
- They went up the hill and into the station

But a position and a direction adjunct normally cannot be coordinated. Hence in

- The baby was crawling upstairs and into his parents’ bedroom

upstairs can be interpreted only as a direction adjunct since it is coordinated with a phrase that has only a directional function.

8.27 Hierarchical relationship
Two position adjuncts can co-occur:

- Many people eat in restaurants (A₁) in London (A₂)

Only the adjunct denoting the larger place can be moved to initial position:

- In London many people eat in restaurants
- *In restaurants many people eat in London

Initial position may be preferred in the case of a prepositional phrase that can also be interpreted as postmodifier of a previous noun phrase, as possibly with (restaurants in London (cf 8.25).

Two direction adjuncts can also co-occur:

- He came to London from Rome
- He went from Rome to London

The normal order of these direction adjuncts accords with the interpretation of the verb. Come concerns arrival, and therefore the destination (e.g. London) is normally mentioned before the point of departure (from Rome), whereas go concerns departure and therefore the reverse order is normal.

The normal order of juxtaposed direction adjuncts otherwise follows the same order as the events described:

- They drove down the hill (A₁) to the village (A₂)

Similarly, only the adjunct relating to the earlier event can be transposed to initial position:

- And then from Alexandria the party proceeded to Cairo

8.28 Positions of place adjuncts
Both types of place adjunct favour final position:

position
- I’ll meet you downstairs
- You’ll find the sugar where the coffee is
direction
- I’ll go downstairs
- We’re moving some new furniture into the kitchen

Position adjuncts, particularly prepositional phrases, often appear initially. They may be put there to avoid end-focus (14.11), or to avoid misinterpretation (8.76), or to avoid a clustering of adjuncts at final position, though it is not usually possible to isolate any one reason.

Outside, children were jumping and skipping
Here...be and There...be with a personal pronoun as subject and the verb in the simple present are commonly used to draw attention to the presence of somebody or something:

Here I am/Here it is/There she is/There you are

 Speakers sometimes put position adjuncts (especially here, there, and compounds with -where) in M2 and more rarely in M1 (8.3):

Life is everywhere so frustrating
We are here enjoying a different kind of existence

Place adjuncts can take the position between verb and object if the object is long:

They moved into the kitchen every conceivable kind of furniture

Some direction adjuncts are put initially to convey a dramatic impact. They normally co-occur with a verb in the simple present or simple past:

Away he goes

If the subject is not a pronoun but a noun (and therefore has greater information value), subject-verb inversion is normal when any place adjunct is initial (14.12):

Away goes the servant

Here + be and there + be with the verb in the simple present are common in speech:

Here are the tools

There's your brother

Direction adjuncts are put in initial position virtually only in literary English and in children's literature. A few exceptions occur in informal speech, mainly with go, come, and get in either the imperative with the retained subject you or in the simple present:

In (the bath)
Over (the fence)
Under (the bridge)

you come
you go
you get

On
Under
Round

there they go
there we go

Time adjuncts
8.30

Here) you are = This is for you
Here we are = We've arrived at the expected place
There you are = That supports or proves what I've said

[b] Certain direction adjuncts are commonly used as imperatives, with an implied verb of motion:

Outside!, In(side)!, (Over) Here!, (Over) There!, (Right) Back!,

Dance!, O'er!, Up!, Under!, Left!, Right!, Away!

Up the stairs!, Out of the house!, To bed!

This applies also to some other adjuncts, e.g.: Quickly!, Slowly!, Carefully!

8.29

Position adjuncts in relation to subject and object

Position adjuncts normally indicate where the refe rent of the subject and (if present) of the object are located, and usually the place is the same for both referents:

I met John on a bus (John and I were on the bus)

But sometimes the places can be different:

I saw John on a bus (John was on the bus but I need not have been)

With verbs of placing, the reference is always to the place of the object and normally will differ from the place of the subject (cf. 8.44, and complex transitive complementation, 12.26f):

I have kept/put/park/shelter my car in a garage

With certain verbs of saying, arranging, expecting, position adjuncts are resultative and are like predicative adjuncts of the direct object (cf. 12.14 Note):

I want my car in the garage ("to be in the garage")
They plan a meeting at my house ("that there should be a meeting at my house")
They offered a barbecue nearby ("to have a barbecue nearby")
I like my dinner in the kitchen ("to have my dinner in the kitchen")

The position adjunct may sometimes refer to the object in a conditional relationship:

I only like barbecues on the beach ("if they are held on the beach")

Note
[a] There are some idiomatic expressions with here and there:
### 8.31 Time when adjuncts

Most time when adverbs can serve as a response to a when question:

**A:** When did he arrive?  **B:** 

\[ \text{\textit{Last night.}} \quad \text{\textit{While you were at the library.}}\]

*When* in its various uses is in part pro-form for the time adjuncts. For *then* as a pro-form for these time adjuncts, see 10.5, 10.28.

Time when adjuncts can be divided into

[A] those denoting a point of time

[B] those denoting a boundary of time, i.e., a point of time but also implying the point from which that time is measured

Common adverbs in these two groups include:

**Group A**
- again ("on another occasion''), just ("at this very moment''), late ("at a late time''), now ("at this time''), nowadays ("at the present time''), presently ("at the present time''), esp. AmE, then ("at that time''), today

**Group B**
- afterwards, before, eventually ("in the end''), formerly, just ("a very short time ago''), lately ("a short time ago''), momentarily

---

### 8.32 Time when adjuncts

("in a moment''), AmE, previously ("before''), presently ("soon'"), recently ("a short time ago'"), since ("after that'"), soon, then ("after that'"

**Examples of the use of time when adjuncts:**

**Group A**
- I was in New York last year and am now living in Baltimore
- I'm just finishing my homework
- I was awarded my Bachelor of Arts degree in 1970
- I'll tell you all the news when I get back home

**Group B**
- I haven't any time at the moment but I'll see you soon
- Take a drink and then go to bed
- Will you be here after lunch?
- He owed me a lot of money and wouldn't pay me back until I got my lawyer to write to him. He has paid me back in full since then
- She left him after he struck her

Most time when adjuncts in Group A normally occur finally, but just is restricted to M2 position (8.3), eg: I've just heard that you are leaving us.

Nowadays and presently commonly occur initially, eg: Nowadays, many teenagers have long hair. Those in Group 2 commonly occur initially or at M2 position.

**Note**

[a] Earlier and later are synonymous with before (that) and afterwards respectively:
- He remembered the many insults that he had earlier experienced
- He handed in his resignation, and later regretted his hasty action

[b] Presently is synonymous with soon where there is a modal auxiliary or (for some speakers) when the verb is in the past:
- They 
  - will presently call on him
- (Some find presently unacceptable when it co-occurs with a verb in the past.)
- On the other hand, when the verb is in the present, it is synonymous with at present (esp. AmE):

  - They are presently staying with him

**8.32 Most adverbs in Group B are used as correlatives to denote temporal sequence; as such they tend to occur initially or medially:**

*First* they petitioned the Governor, but heard nothing from him. *Then* they wrote to the President, and received a polite but vague reply from some official. They *next* organized a peaceful demonstration. And *finally* they picketed all Federal buildings in the city.
8.33
Time when adjuncts can be in a hierarchical relationship:

I'll see you at nine (A₁) on Monday (A₂)

The order of final adjuncts depends in part on information focus, but the tendency is for the superordinate adjunct (the one denoting the more extended period) to come last. However, the order may be reversed if the other adjunct is considerably longer:

I was in New York last year (A₁) before the first snow fell (A₂)

Only the superordinate adjunct can occur initially (8.27, 8.36):

On Monday I'll see you at nine
*At nine I'll see you on Monday

8.34
Time duration adjuncts

Time duration adjuncts can be divided into two groups:

[A] those denoting length of time
[B] those denoting duration from some preceding point of time

Time duration adjuncts in Group A can serve as a response to a (for) how long question:

A: How long are you staying (for)?
B: (For) About a month. Till I can get my car repaired.

Adverbs in Group B cannot serve as a response to such a question though prepositional phrases and clauses can do so:

A: (For) How long have you been collecting stamps?
B: *Since* Recently/Since last month/Since I was a child

Those in Group B co-occur with perfect aspect (cf 11.49):

His studies haven’t been improving lately/recently/since

Common adverbs in the two groups include:

Group A
always, long, momentarily (’for a moment’), permanently, temporarily

Group B
lately/recently (’during a recent period’)
since (’from some time in the past’)

Examples of the use of time duration adjuncts:

8.35 Time frequency adjuncts

Group A
I have always lived here
I’ll be in California for the summer
Was it noisy the whole night?
There was no trouble while we were there

Group B
He insulted me last year and I haven’t spoken to him since
Things haven’t become any better lately
I have been waiting for the books to be delivered ever since I came to this apartment

Time duration adjuncts are normally positioned finally, except for three adverbs normally positioned at M2 (8.3): momentarily, permanently, temporarily.

Note
[b] When lately and recently are time when adjuncts (8.31), they can co-occur with simple past as well:

He lately/recently moved into a new apartment
Since requires perfect aspect even when ’is a time when’ adjunct:
He has since moved into a new apartment

[g] Uninflected long is normally a non-assertive form (7.35) and positioned finally, but it can be an assertive form when it co-occurs with certain verbs and is then usually positioned at M2. The verbs seem to be mainly verbs of belief or assumption (11.58), attitudinal verbs, and some verbs of speaking:

I have long admired his style of writing
He has long thought of retiring at the age of 55

[e] Since when and until (or till) when are used to form questions:

A: Since when have you known him?
B: Since he joined our club.

A: Until when are you staying?
B: Until next Monday.

These are the normal positions for since and until till, postposition being unacceptable for since and until: *When have you known him since?* *When are you staying until?* and the less common position for till: *When are you staying till?* In this respect, they contrast with: how long... for: for is normally postposed, the initial position being a formal variant.

Time frequency adjuncts

8.35

Most time frequency adjuncts can serve as a response to a how often question:

A: How often do you wash your car?
B: (Every Sunday).
Whenever I find a spare half-hour.
Time frequency adjuncts are usually adverb phrases or noun phrases, and they can be divided semantically into two major subclasses:

[I] those naming explicitly the times by which the frequency is measured: DEFINITE FREQUENCY

[II] those not doing so: INDEFINITE FREQUENCY

Each of these subclasses can in turn be subdivided. In each case we list common adverbs.

[I] DEFINITE FREQUENCY

[A] PERIOD FREQUENCY
Committee meetings take place weekly
If so desired, rent can be paid per week instead of per month
common adverbs: hourly, daily, weekly, monthly, annually

[B] NUMBER FREQUENCY
I have been in Singapore ONCE (only)
He again demanded a refund ("for a second time")
common adverbs: again, once ("one time only"), twice, etc;
otherwise phrases, e.g.: three times, on five occasions

[II] INDEFINITE FREQUENCY

[C] USUAL OCCURRENCE
We normally don’t go to bed before midnight
As usual, nobody asked anything at the end of the lecture
common adverbs: commonly, generally, invariably, normally, usually

[D] CONTINUOUS/CONTINUAL FREQUENCY
Does she always dress well?
He is continually complaining about the noise
common adverbs: always, constantly, continually, continuously

[E] HIGH FREQUENCY
I have often told them to relax more
Have you been drunk many times?
common adverbs: frequently, often, regularly, repeatedly

[F] LOW OR ZERO FREQUENCY
I sometimes think she doesn’t know what she’s talking about
I have been in his office on several occasions
common adverbs: infrequently, occasionally, rarely, seldom, sometimes; never, ever ("at any time")

Time frequency adjuncts in Groups A and B normally occur finally. Those in Groups C–F are normally positioned at M2, but are often found at M1 (8.3). Phrases (apart from those consisting of an adverb or a pre-modified adverb) are normally initial for Group C (eg: as usual, as a rule, for the most part) and final for Groups D–E (eg: at all times, many times, now and again).

Note
We should add to Groups E and F items that are used as intensifiers (8.18):

[E] much, a lot, a good deal, a great deal (all equivalent to often or very often)
[F] a little ("very occasionally"), little ("hardly at any time"),
less ("less frequently"), least ("least frequently"),
a bit ("occasionally"); barely, hardly, scarcely
eg I don’t see him very much ("very often")
I go there very little ("very infrequently")

As frequency adjuncts, hardly and scarcely tend to co-occur with non-assertive ever ("at any time"):
I hardly/scarcely ever go there

8.36
Adjects of definite frequency in Group A denote the period of time by which the frequency is measured, while those in [B] express the measurement in number of times. Items from each group can co-occur, normally with the item from [B] coming first:
You should take the medicine twice [P] daily [A]
Those in [A] can also co-occur with each other in a hierarchical relationship:
She felt his pulse hourly [A] each day [A]
The order of the adjuncts in final position depends in part on information focus, but only the one denoting the longer period can occur initially (cf 8.27, 8.33):
Each day she felt his pulse hourly
Those in [B] can likewise co-occur with each other in a hierarchical relationship with a momentary verb (3.35):
I hit him twice on two occasions ("two times on each of two occasions")
As here, the superordinate adjunct tends to follow the subordinate adjunct; but it can be initial:
On two occasions I hit him twice
Adjuncts in [B] can often be the response to the question How many times?

A: How many times did you hit him?  B: Twice.
Adjuncts of indefinite frequency in Group C denote usual occurrence. They differ from most of the other adjuncts of indefinite frequency in that they can precede the clausal negative, in which case they indicate that it is normal for something not to occur:

Generally, Normally, Usually, he doesn’t take medicine

Those in [E] and [F] that precede negation express a high or low frequency. It is not contradictory to assert that it is frequent (or infrequent) for something to occur and at the same time that it is frequent (or infrequent) for it not to occur:

[Often] he doesn’t take medicine, but [often] he does

Occasionally, [take medicine]

We can see from this example that often does not necessarily imply the majority of times, and the same is true for frequently. However, except for invariably, those in [C] do imply the majority of times; they also allow for exceptions, so that we can say:

Generally, Normally, Usually, he doesn’t take medicine, but sometimes he does [take medicine]

Frequency adjuncts in [D] normally cannot precede negation:

*He always constantly doesn’t pay his debts on time

Instead we use never, not . . . ever, or not . . . at all:

He never pays his debts on time

He doesn’t ever pay

He didn’t drink whisky at all

8.38

TIME FREQUENCY ADJUNCTS AND QUANTIFIERS

If the subject is generic (4.18), many adjuncts of indefinite frequency, particularly when positioned initially or medially, are equivalent to certain predeterminers (4.7 ff) or to certain quantifiers (4.13 ff) in the noun phrase of the subject. For example, in

Sailors drink rum often (‘on many occasions’)

often refers to the frequency of the drinking of rum. However,

Often sailors drink rum (‘it often happens that . . . ’)

8.40 Other time relationships

is very similar to

Many sailors drink rum

Other examples:

Universities sometimes have linguistics departments

= Some universities have linguistics departments

Students occasionally fail this course

= A few students fail this course

Officers never get drunk while on duty

= No officers get drunk while on duty

If the direct object is generic, the adjunct may be equivalent to a pre-determiner or quantifier in the noun phrase of the direct object:

I often find spelling mistakes in students’ essays

= I find many spelling mistakes in students’ essays

Other time relationships

8.39

Adjuncts included here express some relationship in time other than those specified in 8.31–38. One group consists of adjuncts concerned with the sequence within the clause of two time relationships, and they co-occur with time when adjuncts. Many of the same items are also used as correlatives to denote temporal sequence between clauses or between sentences (8.32):

These techniques were originally used in the Second World War

It wasn’t until last night that I was finally introduced to her

She broke her leg for the first time when she was ten

Adverb phrases normally appear in M2 (8.3) and other phrases in final position. Common adverbs in this group include afterwards, eventually, finally, first, later, next, originally, subsequently, then.

8.40

Another group consists of adjuncts that are similar to time duration adjuncts in that they express duration up to or before a given or implied time; they are related by assertive/non-assertive contrasts (7.35):

assertive forms: already, still, by now

non-assertive forms: yet, any more, any longer

negative forms: no more, no longer

They have finished their work by now

We haven’t yet eaten

He would stay no longer
Most of these adjectives occur either in M2 position (8.3) or finally, but already is normally in M2 position. The three items yet, already, and still are in particular closely related. In contrast to non-assertive yet, already and still cannot lie within the scope of clause negation (7.40) except in questions. Still, unlike already, can precede negation. We therefore have the following possibilities:

**DECLARATIVE POSITIVE**
- I *already* like him (*I have by this time come to like him*)
- *I yet* like him
- *I still* like him (*I continue to like him*)

**DECLARATIVE NEGATIVE** (adverb preceding negation)
- *I already* haven't spoken to him
- *I yet* haven't spoken to him
- *I still* haven't spoken to him (*I haven't spoken to him so far*)

**DECLARATIVE NEGATIVE** (adverb following negation)
- *He can't* already drive
- *He can't* drive yet (*He can't drive up to this time*)
- *He can't* still drive (*He can't continue to drive*)

**INTERROGATIVE POSITIVE**
- Have you *already* seen him? (That was quick)
- Have you seen him: yet? (*You've been here ages*)
- Do you *still* see him? (*Do you continue to see him?*)

**INTERROGATIVE NEGATIVE**
- Haven't you seen him *already*? (*You haven't by this time seen*; Haven't you seen him yet? *him?*
- Don't you *still* see him? (*Don't you continue to see him?*)

**Note**
[c] The difference between *already* and *yet* in questions is that *already* expects an affirmative answer whereas *yet* leaves open whether the answer is negative or positive (7.46f).
[b] *Yet* can be assertive in certain contexts where it is similar in meaning to *still*:
- I have *yet* to find out what he wants (*I have still to ...*)
- I can see him *yet* (*I can still see him*)
- There's plenty of time *yet* (*There's plenty of time *still*"
[c] *Still* often blends concessive and temporal meanings (cf. 8.53). For example, in *It's very late and he's still working* (*He's continuing even so to work*)

### 8.43 Time adjectives and time reference

- *Time duration* (D) – *time frequency* (F) – *time when* (W)

The following sentences exemplify the normal order (but cf 8.46):
- I was there for a *day or so* (D) *every year* (F) *during my childhood* (W)
- I'm paying my rent monthly (F) *this year* (W)
- Our electricity was cut off briefly (D) today (W)

#### 8.42 Coordination

Time adjectives in the same subclass can be coordinated:

**TIME WHEN**
- today and tomorrow now or later
- permanently or temporarily for the week or (for the) month
- once or twice each day and (each) night

**Note**
Now and then and now and again are common coordinated expressions used for time frequency; ("From time to time", "occasionally"). Similarly, again and again and over and over are used to denote frequent repetition and not just two repetitions (5.33).

### 8.45 Time adjectives and time reference

Time adjectives play a part in specifying the time reference of the verb phrase. Thus, *now* determines that the reference in

- He is playing *now* is present, and *tomorrow* that it is future in
- He is playing *tomorrow*

Some time adjectives cannot co-occur with particular forms of the verb phrase. Thus, *tomorrow* does not co-occur with the simple past:

- He played *tomorrow*

For further discussion of this topic, see 3.30.

**Note**
An apparent exception is with those verbs of saying, arranging, expecting, or wanting whose object has future reference. In such cases, though the expressed verb is in the past, there may be a time adjunct with future reference to the object:
- She wanted the book tomorrow (*She wanted to have the book tomorrow*)

The adjunct can co-occur with another that has past reference to the verb:
- As far back as March, they predicted a crisis next month (ie their prediction of a crisis next month was made as far back as March).
8.44 Relative positions of adjuncts

Time adjuncts - as predication adjuncts with be

Time adjuncts can co-occur with all verbs, including be:

It's much warmer now

Many of them can also be used as predicative adjuncts with be:

TIME WHEN
The meeting will be tomorrow

TIME DURATION
The show is from nine till twelve

TIME FREQUENCY
Interviews are every hour

Re. in such cases is equivalent to 'take place', and the subject must be eventive. For example in

The opera will be tonight

the opera is interpreted as 'the performance of the opera'.

The reference of the time adjunct may be to the object (cf 8.29). There are two types of such references:

1. The verbs denote the placing or movement of the object, and a place adjunct is present indicating the resulting place of the action. The time adjuncts denote time duration.

They threw him in prison for life ('He will be in prison for life')

2. The verbs are of saying, arranging, expecting, or wanting where the object has future reference. The adjuncts denote time when, time duration, and time frequency.

TIME WHEN (cf 8.43 Note)
TIME DURATION
They offered us the house for the summer ('that we could use the house for the summer')

TIME FREQUENCY
I suggest an informal discussion occasionally ('that there should be an informal discussion occasionally')

8.45 Other classes of adjuncts

Some classes of adjuncts are realized by prepositional phrases or clauses and either rarely or not at all by adverb phrases. For example, there are

adjuncts expressing purpose (6.28, 11.31), but there are few adverbs used in this way. (See Note below.) Other classes of adjuncts are realized by prepositional phrases only; for example, adjuncts expressing source or origin (6.30), as in

He took the book from me

Note

Perhaps symbolically ('for a symbolic purpose', 'as a symbol') and experimentally ('for an experimental purpose', 'as an experiment') in the following sentences are instances of adverbs used to denote purpose:

They symbolically buried the car as a protest against pollution
The teacher experimentally called the students by their first names

8.46 Relative positions of adjuncts

Where adjuncts cluster in initial position, the normal order is process - place - time

This order is exemplified in

He was working with his shears (process) in the garden (place) the whole morning (time).

Three other general principles apply to relative order whether within a class or between classes:

1. The normal relative order can be changed to suit the desire for end-focus (14.2)

2. A clause normally comes after other structures, since otherwise these would be interpreted as adjuncts of the clause:

We stood talking for a very long time (A₁) where the fire had been (A₂)

3. Longer adjuncts tend to follow shorter adjuncts:

I was studying earlier (A₁) in the university library (A₂)

This principle often coincides with (1) and (2).

Adjects that can occur initially are often put in that position for reasons of information focus, but also to avoid having too many adjuncts in final position. We might, therefore, have moved the time adjunct in the first example of this section to initial position:

The whole morning he was working with his shears in the garden

It is not usual for more than one adjunct to be in initial position, but time and place adjuncts sometimes co-occur there:
In London, after the war, damaged buildings were quickly demolished and replaced by new ones.

Viewpoint adjuncts also co-occur with other adjuncts in initial position:

Economically, in this century our country has suffered many crises.

**Disjuncts**

8.47

Most disjuncts are prepositional phrases (6.38 ff) or clauses (11.23 ff). Disjuncts can be divided into two main classes: **style disjuncts** (by far the smaller class) and **attitudinal disjuncts**. Style disjuncts convey the speaker's comment on the form of what he is saying, defining in some way under what conditions he is speaking. Attitudinal disjuncts, on the other hand, comment on the content of the communication.

**Style disjuncts**

8.48

Examples of the use of style disjuncts:

*Seriously*, do you intend to resign?

*Personally*, I don't approve of her.

*Strictly speaking*, nobody is allowed here.

There are twelve people present, to be precise.

If I may say so, that dress doesn't suit you.

The adverb phrase as style disjunct implies a verb of speaking of which the subject is the *I* of the speaker. Thus, *very frankly* in

*Very frankly*, I am tired.

Is equivalent to *I tell you very frankly*. In a question, eg

*Very frankly*, is he tired?

The disjunct may be ambiguous. Here, *very frankly* corresponds to *I ask you very frankly* or to the more probable *Tell me very frankly*.

Common adverbs as style disjuncts include: *bluntly, briefly, candidly, confidentially, frankly, generally, honestly, personally, seriously.*

Style disjuncts normally appear initially.

8.49

For some adverb phrases as style disjuncts, we have a series corresponding to them in other structures. For example, in place of *frankly in*.

Frankly, he hasn't a chance.

**Attitudinal disjuncts**

8.50

Attitudinal disjuncts convey the speaker's comment on the content of what he is saying (cf 6.45, 11.45). They can generally appear only in declarative clauses:

*Obiously*, nobody expected us to be here today.

*Understandably*, they were all annoyed when they read the letter.

He is wisely staying at home today.

They arrived, to our surprise, before we did.

Of course, nobody imagines that he will repay what he borrowed.

To be sure, we have heard many such promises before.

Even more important, he has control over the finances of the party.

They are not going to buy the house, which is not surprising in view of its exorbitant price.

*What is even more remarkable*, he manages to inspire confidence in the most suspicious people.

Many of the adverb phrases are paraphrasable by constructions in which the adjective base is subject complement, expressing an attribute.
of the subject. The subject is the content of the original sentence or (the more usual form) anticipatory it with the original sentence postposed:

**Unfortunately**, Bob rejected the offer
= *That Bob rejected the offer was unfortunate*

\[ it \ was \ unfortunate \] that Bob rejected the offer

Other such paraphrases are sometimes possible, eg

**Rightly**, Bob rejected the offer
= *It was right* for Bob to reject the offer

And similar paraphrases, including some using the verb base, are possible for many prepositional phrases:

**To our regret**, Bob rejected the offer
= *We regretted* that Bob rejected the offer

Common adverbs as attitudinal disjuncts are given below in semantic groups.

Group I: speaker’s comment on the extent to which he believes that what he is saying is true.

(a) These express primarily a subjective view on the truth of what is said, usually the view of the speaker:

**Certainly**, they have no right to be there (*I am certain that . . .*)
He has **probably** left by now (*I consider it probable that . . .*)

Those expressing conviction: **admittedly**, **certainly**, **definitely**, **indeed**, **surely**, **undeniably**, **undoubtedly**, **unquestionably**
Those expressing some degree of doubt: **quite** (*etc*) likely, **maybe**
(informal), **perhaps**, **possibly**, **presumably**, **reportedly**, **supposedly**

(b) These present degrees of conviction as open to objective evidence:

**Obviously**, they have no right to be there (*It is obvious to me and to everybody else that . . .*)
Those expressing conviction: **clearly**, **evidently**, **obviously**, **plainly**
Those expressing some degree of doubt: **apparently**

(c) These refer to the reality or lack of reality in what is said:

Those asserting the reality of what is said: **actually**, **really**
Those expressing a contrast with reality: only **apparently**, **ideally**, **nominally**, **officially**, **superficially**, **technically**, **theoretically**
Those expressing that what is being said is true in principle: **basically**, **essentially**, **fundamentally**

Group II: comment other than on the truth-value of what is said.

(a) These convey the attitude of the speaker without any necessary implication that the judgment applies to the subject of the sentence or indeed to the speaker. Thus,

**Fortunately**, John returned the book yesterday

might imply that John was fortunate in doing so (perhaps he would have needed to pay a large fine otherwise) or that someone else (possibly, but not necessarily, the speaker) was fortunate as a result of John’s action.

amazingly, **curiously**, **fortunately**, **funnily enough** (*enough* usual in BrE, **obligatory** in AmE), **happily** (**formal**), **hopeful** (esp AmE), **luckily**, **naturally**, **not unnaturally**, **preferably**, **strangely**, **surprisingly**, **undoubtedly**, **unfortunately**, **unhappily** (**formal**), **unluckily**

(b) These convey the speaker’s attitude, with an implication that the judgment applies to the subject of the sentence. Thus,

**Wise**, John returned the book yesterday

implies that the speaker considers the action as wise and he also considers John wise for doing the action.

**rightly**, **wrongly**, **foolishly**, **wisely**

Adverbs with an -ing participle base, eg: **surprisingly**, are the most productive class of adverbs as attitudinal disjuncts.

While attitudinal disjuncts can appear in almost any position, the normal position for most is initial. However, some adverb phrases in [Ia], eg: **probably**, **possibly**, and all in [Iib], eg: **rightly**, normally occur at M2 (8.3).

8.51 The semantic distinction between adverbs in Groups I (eg: **certainly**, **clearly**) and II (eg: **fortunately**, **wisely**) is reflected in the fact that it is possible to use putative should (3.50) in the correspondences of Group II. If should is inserted in correspondences of Group I, it conveys obligation and alters the meaning of the sentence radically.

Group I

**Clearly**, he is behaving well

= **It is clear** that he is behaving well
≠ **It is clear that he should be** behaving well (*ought to be behaving well*)
Group II

Fortunately, he is behaving well

= It is fortunate that he is behaving well

Putative should is excluded from Group I correspondences, where the factual basis of what is said is asserted or questioned, whereas it is admitted in Group II correspondences, where an opinion is expressed.

Note
[0] Surely is commonly used to invite agreement from the person or persons addressed.

[b] Naturally and not unnaturally are paraphrasable by ‘as might have been expected’ or ‘of course’. They do not correspond to It is natural or It is not unnatural.

8.52
The difference in meaning between Subgroups IIa (e.g.: surprisingly) and IIb (e.g.: rightly) is reflected in the fact that only in IIb can we make a paraphrase that relates to the subject of the clause:

Subgroup IIa

Surprisingly, John returned the money

= It was surprising that John should have returned the money

\[ \neq \text{*John was surprising to return the money} \]

Subgroup IIb

Rightly, John returned the money

= It was right that John should have returned the money

= John was right to return the money

The predication applies to the agent in a passive sentence, whether the latter is present or recoverable or indefinite. Hence, we can have the following paraphrases:

Rightly, the money was returned (by John/someone)

= John/someone was right to return the money

Conjuncts

8.53
Most conjuncts are adverb phrases or prepositional phrases. For distinctions between conjuncts and conjunctions, see 9.11 ff.

Examples of the use of conjuncts are given below, followed by a list of common conjuncts, which are grouped according to their subcategories, with references to the sections in Chapter 10 where their role is discussed:

I'd like you to do two things for me. First, phone the office and tell them I'll be late. Secondly, order a taxi to be here in about half an hour.

You can tell him from me that I'm not going to put up with his complaints any longer. What's more, I'm going to tell him that myself when I see him tomorrow.

I see that you've given him an excellent report. You're satisfied with his work then, are you?

I took him to the zoo early this morning and then we went to see a circus. All in all, he's had a very good time today.

It was a very difficult examination. Nevertheless, he passed it with distinction.

He doesn't need any money from us. On the contrary, we should be going to him for a loan.

Enumerative (10.10): first, second, third . . .; firstly, secondly, thirdly . . .; one, two, three (especially in learned and technical use); a, b, c (especially in learned and technical use); for one thing . . . (and) for another thing; for a start (informal); to begin with, to start with; in the first place, in the second place; next, then; finally, last, lastly; to conclude (formal)

Reinforcing (10.11): also, furthermore, moreover, then (informal, especially spoken), in addition, above all, what is more

Equate (10.11): equally, likewise, similarly, in the same way

Transitional (10.13): by the way, incidentally

Summative (10.14): then (all) in all, in conclusion, to sum up

Apposition (10.15, cf. also 9.48): namely (often abbreviated to o.c. in formal written English); in other words, for example (often abbreviated to e.g. or eg.), in place of, that is (often abbreviated to I.e. or i.e. in specialized written English), that is to say

Result (10.16): consequently, hence (formal), so (informal), therefore, thus (formal), as a result, somehow (for some reason or other)

Inferential (10.17): else, otherwise, then, in other words, in that case

Reformulatory (10.18): better, rather, in other words

Replacive (10.18): alternatively, rather, on the other hand

Antithetic (10.20): instead (blend of antithetic with replacive), then, on the contrary, in contrast, by comparison, (on the one hand . . .) on the other hand

Concessive (10.21 ff): anyhow (informal), anyway (informal), besides (blend of reinforcing with concessive), else, however, neverthe-
Adjuncts, disjuncts, conjunctions 8.54

less, still, though, yet, in any case, at any rate, in spite of that, after all, on the other hand, all the same

TEMPORAL TRANSITION (10.5): meantime, meanwhile, in the meantime

Note
[a] Somehow has been listed with result conjunctions because it is closest to them semantically. It differs from all other conjunctions in not indicating a relationship between its clause and what precedes:

Somehow I don’t trust him (‘for some reason or other’)

Somehow is used when the reason is not made explicit in the preceding context.

[b] On the other hand is an alternative form of on the other hand when it is correlative to on the one hand.

8.54 Positions of conjunctions

The normal position for most conjunctions is initial. In that position they are usually separated from what follows by a zero unit boundary in speech or a comma in writing. In other positions, they may be in an independent tone unit or enclosed in commas to prevent confusion with homonyms or contribute towards indicating information focus.

Some conjunctions are restricted, or virtually restricted, to initial position: again, c’so, c’tgether, besides, better, else, equally, further, hence, likewise, more, only, overall, similarly, so, still, then (antithetic), yet.

Medial positions are rare for most conjunctions, and final position rarer still. Those that readily occur finally include anyhow, anyway, otherwise, and (commonly) though. The last two frequently appear medially.

Virtually all conjunctions can appear with questions, most of them initially:

Anyway, do you know the answer?

Will you therefore resign?

Note
So, yet, only, and else are distinguished by the punctuation convention that allows them to be separated from the previous clause by a comma where other conjunctions would require a more major mark of punctuation (App III.2), eg: They thought he wasn’t coming, so they left without him. Compare: They thought he wasn’t coming; therefore they left without him, where at least a semi-colon is required between the two clauses. (Notice that else is normally, though not necessarily, preceded by the coordinator or, eg: They must be satisfied, or else they would have complained by now.)

So, yet, and else usually occur without intonation or punctuation separation from what follows. However, when so signals a general inference from the previous linguistic context it might be paraphrased by ‘it follows from what has been said’, it is often marked by punctuation and intonation separation:

So, you think you know best (informal)

For so and yet in relation to coordinators, see 9.10–15.

8.55 Conjunctions as correlative

Sometimes the logical relationship between a subordinate clause and the following superordinate clause is emphasized by adding a conjunction to the latter:

Though he is poor, yet he is satisfied with his situation

The sentences with the subordinator alone and the conjunction yet alone are similar in meaning:

Though he is poor, he is satisfied with his situation

He is poor, yet he is satisfied with his situation

The major difference is that the second states his poverty as a fact, whereas in the first his poverty is presupposed as given information (cf 14.4).

The conjunctions that reinforce particular subordinators (11.7) are shown below. It is more usual to reinforce condition and concession subordinators than cause and time subordinators.

condition: if . . . then

concession: although (even) though/while/grant:ed (that)/
even if

cause: because/seeing (that) . . .

time: while . . . meanwhile/meanwhile

Correlations with concession and cause are chiefly found in formal use.

Note
Certain other expressions with concessive force may correlate with a concessive conjunction, for example, true, clearly, or certainly, of 10.22.

8.56 Conjunctions for clauses with conjunctions

A clause containing a conjunction may be linked to a preceding clause by one of the coordinators (and, or, but). The following conjunctions seem to be limited to the specified coordinators:

and so or + else/again (replacive)

but + however/then (antithetic)/though

and/or but + besides/still/yet/nevertheless

Two of these conjunctions – however and though – cannot follow the conjunction immediately. That is to say, if but is the coordinator, however and though cannot be initial, although either can be if there is no preceding conjunction. We can therefore have:
You can phone the doctor if you like, but I very much doubt, however, whether he will come out on a Saturday night.

You can phone the doctor if you like. However, I very much doubt whether he will come out on a Saturday night.

but not

*You can phone the doctor if you like, but, however, I very much doubt whether he will come out on a Saturday night.

Conjuncts occasionally occur in dependent finite clauses; eg

(a) Adverbial clauses:

I met him in the park, when, however, we had no time to speak

(b) Restrictive relative clauses:

He was considered a man who might anyway break his promise

(c) Non-restrictive relative clauses:

I'm inviting Peter, who is a student, and who therefore cannot afford to spend too much more.

Bibliographical note

Some recent contributions on adverbs: Bolinger (1972); Greenbaum (1969) and (1970); Jacobson (1964).

NINE

COORDINATION AND APPosition

9.1

This chapter is devoted primarily to coordination and apposition. But since these often involve ellipsis, it seems convenient to bring together here other cases of ellipsis except those discussed under sentence connection (10.29 ff, 10.44 ff), comparison (11.37 ff), the adjective as head of noun phrase (5.6 ff), and the genitive (4.75).

Ellipsis is most commonly used to avoid repetition, and in this respect it is 'like substitution. For example, we can avoid the repetition of sing in

*She might sing, but I don't think she will (sing)

not only by the ellipsis of the word but also by the use of a pro-form:

She might sing, but I don't think she will do so

Another important reason for ellipsis is that by omitting shared items attention is focused on new material:

A: Have you spoken to him? B: (I have) Not yet (spoken to him).

Ellipsis dependent on linguistic context

9.2

Adverbial finite clause

In adverbial finite clauses the whole of the predication or part of it can be omitted (cf 9.23 ff):

I'm happy if you are (happy)

Mary is dusting the furniture because Alice won't (dust the furniture)

But we cannot elipit merely the object:

*I'll open an account if you'll open (an account)

or merely the subject complement if the verb is other than be:

*He became a member, since she became (a member).
9.3
Adverbial non-finite and verbless clauses
The subject (co-referential with that of the superordinate clause) and an appropriate form of be are ellipted in:

(1) participle clauses (11.3 ff)

Although (he was) told to stop, he kept on working
If the subordinator is not present, more than one subordinator can be supplied and there may be several possibilities for tense and aspect:

(If/When they are) Punished, they will not cooperate
Although living many miles away, he attended the course
— Although he is living was living lives lived many miles away, he attended the course

(2) verbless clauses (11.5)

While (he was) at Oxford, he was active in the dramatic society

9.4
Postmodification
Postmodifying clauses or phrases (13.5 ff) can often be considered reduced relative clauses:

(1) postmodifying participle clauses:

The police rounded up men who were known to have been in the building at that time
The man owning that car will be fined for illegal parking (who owns that car)

(2) postmodifying adjective phrases:

The men responsible for the administration of the school refused to consider the matter

(3) postmodifying prepositional phrases:

He spoke to the girl from New York

9.5
Supplementing and appended clauses
A supplementing clause can be regarded as an elliptical clause (usually parenthetic or an afterthought) for which the whole of the preceding or interrupted clause constitutes the ellipsis:

I caught the train — just
(— I caught the train. I only just caught the train.)

9.7 Coordination

In an appended clause only part of the preceding or interrupted clause constitutes the ellipsis, and an additional clause constituent is present:

They are meant to wound, perhaps to kill
(— They are meant to wound. They are perhaps meant to kill.)

9.6
Ellipsis not dependent on linguistic context

Some types of informal ellipsis are not dependent on the linguistic context. For example, "You serve you right" can be expanded to "It serves you right." In most cases it is the initial word or words of a sentence that are ellipted. Other examples are given, with an indication of what is ellipted:

(1) Beg your pardon

(You) Had a good time?

(I am) Sorry I couldn't be there

(Are you) Looking for anybody?

(It's) Good to see you

(Is) Anything the matter?

(I've) Got to go now

(Does) Anybody need a lift?

Determiners, operators, and pronouns are commonly omitted in block language (7.66), eg in headlines, titles, notices. They are also commonly omitted in personal letters, in familiar style, in notes (eg of lectures), diaries, and (very drastically) in telegrams.

Note

Several other types of ellipsis found only in familiar style in speech involve particular lexical items:

(1) ellipsis of an article: (The) Fact is we don't know what to do;

(2) ellipsis of a preposition: (Of) Course he's there; ellipsis that includes part of a word: 'Fraid (= I'm afraid) I won't be there. In contrast to the last example, there are many instances where the clipped form of a word is used in all but the most formal styles (App I.44): (tele)phone, (photograph).

Coordination

9.7
Syndetic and asyndetic coordination

The term coordination is used by some grammarians for both syndetic coordination, as in [1] — when coordinators (coordinating conjunctions) are present — and asyndetic coordination, as in [2] — when coordinators are absent but could be supplied:

Slowly and stealthily, he crept towards his victim [1]

Slowly, stealthily, he crept towards his victim [2]

Coordinated units are termed conjoins.
9.8 Coordination and subordination

Explicit indicators of subordination are termed subordinating conjunctions or subordinators. Both coordination and subordination involve the linking of units; but, with the latter, one of the units is subordinated to the other. Thus, in his first and best novel each of the coordinated adjectives is a premodifier of novel. On the other hand, in his first good novel the adjective first does not modify novel directly; it modifies good novel and good in turn modifies novel. Thus, there is a hierarchy in relationships (cf 13.38) and first good are not coordinated.

Similar semantic relationships are found in both coordination and subordination:

He tried hard, but he failed

Although he tried hard, he failed

The concessive-result relationship is the same for [1] and [2], though the ordering of the relationship is different. Moreover, the same semantic relationship between the clauses may be indicated by a conjunct (8.2). Thus, the conjunct yet in [3] has a very similar force to but in [1]:

He tried hard, yet he failed

Sentenc: [3] is an asymmetric coordination which can become sylectic with the addition of but:

He tried hard, but yet he failed

Clausal coordination

Coordinators

9.9

In what follows we are concerned with clausal coordination. For the use of conjunctions in phrasal coordination, see 9.31 ff. There are three coordinators: and, or, but. And and or are the central coordinators from which but differs in some respects. On the gradient between the ‘pure’ coordinators and the ‘pure’ subordinators are for and so that (in the sense ‘with the result that’).

9.10

Restricted to initial position

The clause coordinators are restricted to initial position in the clause:

John plays the guitar, and his sister plays the piano

This is generally true of conjunctions and also of some conjuncts (notably yet and so), but it is not true of most conjuncts, eg: moreover:

John plays the guitar; his sister, moreover, plays the piano.

9.12 Conjunctions preceding

Note

The conjunctions though, as, and that are exceptional in appearing non-initially in certain circumstances (11.9):

Though he is poor, he is happy ~ Poor though he is, he is happy

Although, unlike though, is immobile:

*Poor although he is, he is happy

9.11 Coordinated clauses sequentially fixed

Clauses beginning with a coordinator cannot be moved in front of the preceding clause without producing unacceptable sentences or at least changing the relationships of the clauses:

They are living in England or they are spending a vacation there

*O: they are spending a vacation there, they are living in England

This is also true for conjuncts, but not for most subordinators:

*Nevertheless John gave it away; Mary wanted it

Although Mary wanted it, John gave it away

For and so that behave like coordinators. Contrast:

*For he was unhappy, he asked to be transferred

Because he was unhappy, he asked to be transferred

Note

When clauses are linked by the coordinators and by for and so that, a pronoun in the first clause cannot have cataphoric (that forward) reference to a noun in the second clause. For example, she cannot refer to Mary in

She was very tired, but Mary stayed the whole evening

On the other hand, the pronoun can (but need not) have cataphoric reference when the clauses are joined by a subordinator:

Although she was very tired, Mary stayed the whole evening

9.12 Conjunctions preceding

The coordinators and also for and so that do not allow another conjunction to precede them. On the other hand, subordinators as well as conjunctions can be preceded by conjunctions. In [1] two clauses linked by the conjunct yet are also linked by and:

He was unhappy about it, and yet he did what he was told

In [2] two subordinate clauses are linked by and, which precedes the second subordinator because:

He asked to be transferred, because he was unhappy and because he saw no prospect of promotion
9.13
ELLIPSIS OF SUBJECT
The coordinators allow ellipsis of the subject of the clause they introduce if the subject is co-referential with that of the preceding linked clause:

I may see you tomorrow or (I) may phone later in the day

However, this does not apply to other conjunctions, including for and so that, or to conjunctions other than yet, so, or then ('after that'):

*He did not want it, for was obstinate
They didn't like it, yet (they) said nothing

Note
A subordinator does not allow ellipsis even when its clause is linked by a coordinator:

*Sue didn't tell him the bad news because he was tired and because looked unwell

If the second subordinator in the above sentence is omitted, ellipsis is normal:

She didn't tell him the bad news because he was tired and looked unwell
Conjuncts otherwise not allowing ellipsis will do so if preceded by a coordinator:

*He went to bed early, nevertheless felt tired
He went to bed early, and nevertheless (he) felt tired

9.14
LINKING OF SUBORDINATE CLAUSES
As well as linking two main clauses, and and or can link subordinate clauses:

I wonder whether you should speak to him personally about the matter or whether it is better to write to him

Such linking is not possible for conjunctions or for the other conjunctions except but. But, however, is restricted to linking a maximum of two clauses, and, even so, can link only certain types of subordinate clauses:

He said that John would take them by car but that they might be late

9.15
LINKING OF MORE THAN TWO CLAUSES
Unlike but, and unlike the subordinators and the conjunctions, and and or can link more than two clauses, and all but the final instance of these two conjunctions can be omitted. Thus

John might take them by car, Mary might go with them by bus, or I might order a taxi for them

is interpreted as

John might take them by car, or Mary might go with them by bus, or I might order a taxi for them

9.16
SEMANTIC IMPLICATIONS OF COORDINATION BY AND
And denotes a relationship between the contents of clauses. We can usually make the relationship explicit by adding an adverbial. We illustrate this with parenthesized items in most of the following examples.

(1) The event in the second clause is a consequence or result of the event in the first:

He heard an explosion and he (therefore) phoned the police

(2) The event in the second clause is chronologically sequent to the event in the first:

She washed the dishes and (then) she dried them

(3) The second clause introduces a contrast. And could be replaced by but when this implication is present:

Robert is secretive and (in contrast) David is candid

(4) The second clause is a comment on the first:

They disliked John – and that's not surprising

(5) The second clause introduces an element of surprise in view of the content of the first:

He tried hard and (yet) he failed

Here too, but could replace and.

(6) The first clause is a condition of the second:

Give me some money and (then) I'll help you escape

The implication is shown by the paraphrase:

Give me some money. If you do, (then) I'll help you escape

For the conditional implication to apply, it is usual that

(a) The second clause has a modal auxiliary
(b) The verb of the first clause is an imperative or contains a modal auxiliary.

(7) The second clause makes a point similar to the first:

A trade agreement should be no problem, and (similarly) a cultural exchange could be arranged

(8) The second clause is a 'pure' addition to the first:

He has long hair and (also) he wears jeans.
9.17 SEMANTIC IMPLICATIONS OF COORDINATION BY OR

(1) Usually or is exclusive, expressing the idea that only one of the possibilities can be realized:

You can sleep on the couch, or you can go to a hotel, or you can go back to London tonight

When the content of the sentence allows the realization of more than one alternative, we can exclude the combination by adding either:

You can either boil an egg, or you can make some cheese sandwiches

Even so, a third clause can be added which explicitly allows both alternatives:

You can either boil an egg, or you can make some cheese sandwiches, or you can do both

Some speakers avoid a sentence such as the last, because of prescriptive teaching that insists that either should accompany only two alternatives.

(2) Sometimes or is understood as inclusive, allowing the realization of a combination of the alternatives, and we can explicitly include the third possibility by a third clause:

You can boil an egg, or you can make some cheese sandwiches, or you can do both

(3) The alternative expressed by or may be a restatement or a correction of what is said in the first conjoin:

He began his educational career, or, in other words, he started to attend the local kindergarten
They are enjoying themselves, or at least they appear to be enjoying themselves

(4) Or may imply a negative condition. Thus,

Give me some money or I'll shoot

can be paraphrased by

Give me some money. If you don't, I'll shoot.

This use of or is the negative of one use of and (9.16), but (unlike and) it does not require an imperative or modal auxiliary in the first clause:

They liked the apartment or they wouldn't have stayed so long

9.18 SEMANTIC IMPLICATIONS OF COORDINATION BY BUT

But denotes a contrast.

(1) The contrast may be because what is said in the second conjoin is unexpected in view of what is said in the first conjoin:

John is poor, but he is happy
He didn't want their help, but he had to accept it

(2) The contrast may be a restatement in affirmative terms of what has been said or implied negatively in the first conjoin (9.20):

John didn't waste his time in the week before the exam, but studied hard every evening

With this relationship, it is normal to ellipsis the repeated subject in the second clause.

With the first type of contrast, we can insert in the but clause concessive conjuncts such as yet; with the second type, we can insert the antithetic conjunct: on the contrary (cf 10.20).

9.19 Either ... or, both ... and, neither ... nor

There are three common correlative pairs: either ... or, where either anticipates the alternative introduced by or (9.17); both ... and, where both anticipates the addition introduced by and; and neither ... nor, where neither negates the first clause and anticipates the additional negation introduced by nor. Thus, two clauses with neither in the first and nor in the second are the equivalent of two negative clauses conjoined by and:

David neither loves Joan nor wants to marry her
  = David does not love Joan and does not want to marry her

The position of the anticipatory element – either, both, neither – generally indicates the scope of the alternative, addition, or additional negation respectively, while the second element – or, and, nor – generally introduces a truncated clause that has corresponding scope:

<table>
<thead>
<tr>
<th>He</th>
<th>nor</th>
<th>and</th>
<th>wears jeans</th>
</tr>
</thead>
<tbody>
<tr>
<td>either</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>both</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>neither</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

I can

<table>
<thead>
<tr>
<th>nor</th>
<th>and</th>
<th>sew</th>
</tr>
</thead>
<tbody>
<tr>
<td>either</td>
<td></td>
<td></td>
</tr>
<tr>
<td>both</td>
<td></td>
<td></td>
</tr>
<tr>
<td>neither</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
9.21 Ellipsis in coordinated clauses

*and or but, a possibility which excludes them from the class of coordinators (9.12). Both conjuncts require subject-operator inversion:

He did not want to ask them for help; (but) nor could he do without their help
We owe no money, (and) neither do they

A clause introduced by either of these conjuncts can be separated from the previous clause by a heavier mark of punctuation than the comma. Common anticipatory correlatives with but are not (and anclitic -n't) and not only:

He didn't come to help, but to hinder us
They not only broke into his office and stole his books, but they (also) tore up his manuscript

A more dramatic effect is achieved by positioning not only initially, with consequent subject-operator inversion:

Not only did they break into his office and steal his books, but they also tore up his manuscript

*Note
In a formal and mannered style, nor is occasionally found after an affirmative clause:
It was hoped that all would be agreeable to that proposal. Nor was this hope disappointed.

Ellipsis in coordinated clauses
9.21
ELLIPSES OF SUBJECT (AND AUXILIARIES)
Identical subjects of coordinated clauses are ellipted:

Peter ate a cheese sandwich and (Peter) drank a glass of beer

If the subjects and the auxiliaries are identical, ellipsis of both is normal:

Mary has washed the dishes, (Mary has) dried them, and (Mary has) put them in the cupboard

As is usual for ellipsis in coordination, the realized items are in the first clause and the ellipsis is in subsequent clauses.

*Note
In subordinate clauses, ellipsis of subject alone or of subject with auxiliaries is generally not allowed (but cf 9.3 f):

Jack was looking well although he had slept little
*Jack was looking well although (had) slept little
9.22  
ELLIPSIS OF AUXILIARY ONLY  
If the subjects of coordinated clauses are different, there may be ellipsis of an identical auxiliary:

- John *should* clean the shed and Peter (should) mow the lawn
- If there is more than one auxiliary, it is normal for all to be ellipsed:
  - John *must have been* playing football and Mary (must have been) doing her homework

9.23  
ELLIPSIS OF PREDICATE OR PREDICATION  

Ellipsis of first part of predicate or predication
The first part of the predicate or of the predication may be ellipsed, and the subject may be ellipsed as well. For pro-forms, see 10.29 ff.

(1) Verb phrase only or (less commonly) lexical verb only:

- Yesterday John *was given* a railway set, and Sue (was given) a doll
- I *work* in a factory, and my brother (works) on a farm
- She *will work* today, and (she) may (work) tomorrow

If the clause contains an object with an object complement, the subject must be ellipsed as well:

- His suggestions *made* John happy, but (his suggestions made) Mary angry
- *His suggestions* made John happy, but *his suggestions* Mary angry

(2) Verb phrase plus subject complement:

- John *was the winner* in 1971, and Bob (was the winner) in 1972
- It's *cold* in December in England, but (it's cold) in July in New Zealand

(3) Verb phrase/lexical verb plus direct object:

- Peter *is playing football* for his school and Paul (is playing football) for his club
- Joan will *cook the meals* today and Barbara may (cook the meals) tomorrow
- John will *meet my family* tonight and (John) will (meet my family) again tomorrow

In certain contexts there can be ambiguity as to whether the subject and verb are ellipsed or the verb and object are ellipsed. For example, the sentence

9.25  
Ellipsis of whole of predication
If the predication is ellipsed completely, it is usual to have the predication realized in the first clause and ellipsed in subsequent clauses:

- George will *take the course* and Bob might (take the course) too
  - *They can pay the full fee*, and (they) certainly should (pay the full fee), but (they) probably won't (pay the full fee)

However, it is also possible to have the predication ellipsed in the first clause, in which case it is realized in some subsequent clause:

- George will (take the course), and Bob might, *take the course*

When the predication is ellipsed in the first clause and the subject is
ellipted in a subsequent clause, we have complex ellipsis (fe ellipsis with both previous and subsequent realizations):

*John could have been (watching television), but (John) wasn’t, watching television*

*They no doubt can (pay the full fee), and (they) certainly should (pay the full fee), but (they) probably won’t, pay the full fee
They can (pay the full fee) and (they) should pay the full fee, but (they) won’t (pay the full fee)*

**Note**
The co-occurrence of auxiliaries with predication ellipsis is the same as when only the first part of the predication is ellipted (9.24), provided that the realized predication is in the first clause. However, if the realized predication is in the last clause, then only auxiliaries that take the same head of the verb phrase will normally co-occur. Occasionally one or more of the auxiliaries is also ellipted:

*They could (have saved more), and (they) should, have saved more*

### 9.26 Ellipsis of direct object or subject complement

If the direct object alone is ellipted, the realized items must be in the last clause:

*John likes (Mary), and Peter hates, Mary
George opened (the door) and (George) closed the door*

Similarly, if the subject complement alone is ellipted, and the verb in the last clause is other than *be*, the realized items must be in the last clause:

*George was (angry), and Bob certainly seemed, angry
George has been, (the chairman); and (George) obviously could again become, the chairman*

But it would be more common to have the pro-form *so* (10.36) in the second clause than to have any ellipsis:

*George was angry, and Bob certainly seemed so*

When the verb in the last clause is *be*, the realized items can be either in the first clause or in the last clause:

*Bob seemed angry, and George certainly was (angry)
John has recently become (a very hardworking student), and his brother always was, a very hardworking student*

### 9.27 Ellipsis of adverbial

It is often more satisfactory to say that the scope of the adverbial is extended to subsequent clauses than to say that it is ellipted. This is particularly so when the adverbial is positioned initially. For example, *unfortunately*

*Unfortunately, John is not at home and Sally is too busy to see you*

*appears to apply to a combination of the circumstances described in the two clauses rather than separately to each circumstance.*

*Conjuncts (8.53 ff), disjuncts (8.47 ff), and adjuncts of viewpoint (8.7), time (8.30 ff), and place (8.24 ff) commonly have extended scope:*

*If John is a member, then we should call on him and (we should) ask him to take us along [conjunct]*

*To my surprise, they didn’t appoint him, and they didn’t even interview him [disjunct]*

*Theoretically, I have no objections to his proposal and neither have any of my colleagues [viewpoint adjunct]*

*This afternoon Mary intends to take the children to the beach, but I am going to wash my car [time adjunct]*

*In our school, students and teachers get on well together, but this harmony is comparatively recent [place adjunct]*

Initial position of these adverbials is usually interpreted as implying an extension of scope to subsequent coordinated (or for that matter, subordinate) clause:

*If the adverbials are in the middle of the clause or at the end of any but the last clause, they are generally interpreted as applying only to the clause in which they actually appear:*

*Joan is perhaps shopping and the children are at school*

*Joan is shopping, perhaps, and the children are at school*

*Joan is shopping, and the children are perhaps at school*

*However, if there is an ellipsis that links the two clauses more closely, the scope of the adverbial is extended to the second clause:*

*Mary is perhaps inside the supermarket and John outside*

*Process adjuncts (8.19 ff) are occasionally ellipted, with the realized items present in the last clause:*

*Bill drinks (sparingly), and Peter smokes, sparingly*

*If there is no comma or intonation break, the adjunct applies only to the second clause:*

*Mary spoke and John answered rudely*

### 9.28 Ellipsis of head of noun phrase and of prepositional complement

The head of a noun phrase can be ellipted:
We wanted fried fish, but they gave us boiled (fish).
She wore the red dress, but the blue (dress) suits her better.
This type of ellipsis is not limited to coordination:
He prefers Dutch cheese to Danish (cheese).
The complement of a prepositional phrase can be ellipted, with the realized complement in the second clause:
Bob is bored with (music), but Peter enjoys, music.

9.29
Intonation and punctuation marking of ellipsis
The point where ellipsis has taken place is often marked in speech by an intonation break, that is to say, it co-occurs with the end of an intonation unit (App II.7).
When the ellipsis is in the second and subsequent clauses there is no intonation or punctuation marking for the ellipsis of the subject, or of the subject and immediately following elements:
Peter cooks his own meals and (Peter) washes his own clothes.
It appears that a 'gap' is not felt when the ellipsis immediately follows the coordinator. In contrast, intonation marking is usually present in other cases of ellipsis, though punctuation marking is frequently absent:
John likes Mary, and Peter (likes) Susan.
The men were drinking and the women (were) listening to music.
When the ellipsis is in the first clause, there is usually intonation or punctuation marking both at the point of ellipsis and at the corresponding point in the fully realized clause:
Gerald likes (Sylvia), but Peter hates, Sylvia.
He looked (tired), and (he) indeed was, tired.
They can (be disciplined), (they) should (be disciplined), and (they) will be, disciplined.
However, intonation and punctuation marking may be absent if the ellipsis results in the linking of two lexical verbs:
John found (a valuable stamp) and sold a valuable stamp.
If the first verb can be interpreted as either transitive with ellipsis of the object or as intransitive, the presence of intonation or punctuation marking after the first verb suggests that it is intransitive and that there is therefore no ellipsis. Thus:
Joan writes, and sings ballads.
suggests that Joan writes various things and not necessarily ballads.

9.30
Semantic effect of ellipsis in coordinated clauses
Often the effect of ellipsis is no more than to suggest a closer connection between the content of the clauses, but sometimes the effect is to indicate that there is a combined process rather than two separate processes (cf 9.41f). Thus:
Did Peter tell lies and hurt his friends?
implies that Peter's telling lies had the result that he hurt his friends.
The sentence is one question, and may be answered by yes or no. There is no such implication in
Did Peter tell lies, and did he hurt his friends?
where Peter's telling lies and his hurting his friends are regarded as two separate processes and there are two separate questions. Sometimes, intonation may also be a factor. For example,
Shall we take the car or go by bus?
will probably be regarded as one question and could be answered by No, let's go by taxi. On the other hand,
Shall we take the car or go by bus?
Shall we take the car or shall we go by bus?
would both be regarded as alternative questions (7.54f), requiring as an answer a choice between taking the car or going by bus.
The combinatory effect is common when the coordinated clauses are direct or indirect questions or subordinate to another clause, or when negation is involved.

Phrasal coordination
9.31
And and or are the main coordinators for phrasal coordination. But is used only to link adjective phrases and adverb phrases:
A very long but unusually interesting journey.
He wrote to them politely but firmly.
Although we have suggested that there is ellipsis of the rest of the clause when the verb phrases or parts of them are directly linked, we do not posit ellipsis of the rest of the clause when other phrases are directly conjoined by and and or. For example,
Peter and John played football
is not regarded as elliptical for
Peter played football and John played football.
though, of course, the two sentences can be synonymous. Instead we regard Peter and John as a coordinated plural phrase functioning as subject of the sentence, analogous to the boys or the pro-form they. This type of coordination is phrasal coordination.

Note
Most subordinators cannot be used to link phrases, but two — if and though — are used quite freely to link adjective phrases and adverb phrases, as is the conjunct yet:

A very pleasant if talkative child
A shabby though comfortable armchair
A simple yet devout prayer
He looked at me kindly if somewhat sceptically
He spoke firmly though pleasantly
He drove quickly yet safely

Noun phrases

9.32
Noun phrases are commonly conjoined (13.37):

Peter and John were there
I write articles on current affairs for newspapers and magazines

If I (or its case variant) realizes one of the conjoins, conventions of politeness require that I should always appear last, and it is also common for you to be put first:

you or I; you or they; my friend and me; you, John, and me

9.33
Within the noun phrase there may be ellipsis of the head. For example, in

Old and young men were invited

the subject is elliptical for old men and young men.

In contrast, there is no ellipsis, for the normal interpretation, in

Honest and clever students always succeed

where the same students are both honest and clever. Honest and clever are therefore conjoined adjectives. Similarly, there is no ellipsis of the noun head with appositional coordination (7.21), as in

I like teaching a studious or hard-working undergraduate

If merely two adjectives are conjoined, the coordinators and can be omitted with non-elliptical premodifying adjectives only. Contrast

*Old, young men were invited
Honest, clever students always succeed

9.35
Noun phrases are very occasionally ellipted in the second conjoin when an adjective is present (cf 9.28):

The head of the noun phrase is very occasionally ellipted in the second conjoin when an adjective is present (cf 9.28):

The strong nations and the weak (nations)

9.34
Ellipsis of a noun phrase head can occur with modifiers other than adjectives. For example, with postmodifying prepositional phrases:

He has workers from Ireland and (workers) from France in his factory

and with numerals:

I think there were two (Prime Ministers) or three Prime Ministers

who were assassinated, but I forget which

But phrasal coordination with numerals may express approximation, in which case there is no ellipsis: one or two reasons, a bottle or two, ten or eleven students, three or four hundred people.

There is a similar set of coordinate expressions of approximation with a pro-form in the second conjoin:

They waited ten or so years
He had a dollar or so to spend
He's drunk brandy or something
He's drunk or something

He coughed or something

He went to New Orleans or somewhere

He left at ten or some such time

For non-coordinate means of expressing approximation, see 5.26 f, 8.16 f.

9.35
As pro-forms, demonstratives can be linked to each other or to other determiners in the noun phrase, but the singular forms of the demonstratives are normally not linked to their corresponding plurals:

this book and that book

these chairs and those chairs

that reason or some other reason

these students or other students

A noun phrase can be linked to a pro-form in the second conjoin:

his friends and mine

that method and the other

her idea and John's

your proposals and others

Note
Possessive pronouns are not normally linked, except his followed by her:

his or her friends but *our and their work
9.36
An article realized in the first conjoin of a noun phrase is often ellipted in the second conjoin:

a boy or (a) girl the boys and (the) girls

When premodifiers are present, there can also be ellipsis of the head of the noun phrase in the first conjoin:

the old (men) and (the) young men

Other determiners can also be ellipted in the second conjoin:

my brother or (my) sister other boys and (other) girls

9.37
It is normal for a premodifier realized in the first conjoin of a noun phrase to be ellipted in subsequent conjoins:

young boys and (young) girls

If we ellipt the premodifier, we must ellipt an accompanying determiner:

the young men and (the young) women

Hence,

the young men and the women
does not have ellipsis of the premodifier young in the second conjoin.

Similarly, a postmodifier is commonly ellipted, but it must be realized in the last conjoin and ellipted in previous conjoins:

boys (studying at this school) and girls studying at this school

cows (kept on our farm), bulls (kept on our farm), and pigs kept on our farm

If a determiner is present in the first conjoin, it can be either ellipted or retained in subsequent conjoins without affecting the ellipsis of the postmodifier:

the boys (studying at this school) and (the) girls studying at this school

Ellipsis can occur even if the determiners in the conjoins differ:

many boys (studying at this school) and some girls studying at this school

We can prevent the postmodifier from applying to the first conjoin by reversing the order of the conjoins:

some girls studying at this school and many boys

9.38
Units other than noun phrases

It is also possible to combine ellipsis of premodifier and postmodifier. For example, in place of

the older boys studying at this school and the older girls studying at this school

we can have

the older boys and the older girls studying at this school

with ellipsis of the postmodifier in the first conjoin; or

the older boys and older girls studying at this school

with the additional ellipsis of the determiner in the second conjoin; or

the older boys and girls studying at this school

with ellipsis of the premodifier as well. As we have seen before, separate determiners in the two conjoins do not allow the interpretation that there is ellipsis of any premodifier, and therefore

the older boys and the girls studying at this school
does not have ellipsis of the premodifier older in the second conjoin.

9.38
And and or can link more than two noun phrases (cf 9.15), and all but the final instance of the conjunctions can be omitted:

We thanked John, Peter, and Robert (‘. . . John and Peter and Robert’)

They will employ John, Peter, or Robert (‘. . . John or Peter or Robert’)

The same applies to the coordination of other units:

He was tall, dark and handsome

You can spend your vacation at a hotel, in a cottage by the sea, or at a summer camp

9.39
Units other than noun phrases

1 Prepositional phrases:

The attacks in June and in July failed

He climbed up the wall and over the wall

If the two or more prepositions are identical, then those subsequent to the first can be ellipted:

John complained to Mary and Peter
There are further possibilities of ellipsis:

He climbed up and over the wall
He climbed up the wall and over

(2) Other adverbials and dependent clauses:

You can wash it manually or by using a machine
They can call this week or whenever they wish

If two or more conjunctions are identical, those subsequent to the first can be ellipted:

If I can find the letter and (if) you are interested in it, I'll let you have it.

On the other hand, if two clauses are identical except for their conjunctions, one of the clauses can be ellipted, normally the first, so that two conjunctions are linked.

I am prepared to meet them when (they like) and where they like.

Sometimes the second clause is ellipted:

They will be arriving before the show begins or after (the show begins).

With relative clauses introduced by a preposition and whom, ellipsis of the rest of the first clause is not uncommon:

I want to know by whom (it was ordered) and for whom it was ordered

(3) Adjectives:

Adjectives can be conjoined when they are predicative:

She is young and beautiful

or attributive (cf 9.33):

His clear and forceful delivery impressed the audience

There can be ellipsis of a premodifier or of complementation:

very cheap and (very) gaudy

I am loath (to do it) and afraid to do it

Note

[a] In philosophical and mathematical discourse, if and only if (abbreviated iff) is a common combination with ellipsis of the first clause.

[b] If and when is a stereotyped expression conveying a strong possibility that the condition in the clause will be realized:

If and when he buys the car, I'll try to persuade him to buy the insurance from me

Other institutionalized conjoinings of conjunctions are as and when, unless and until.

9.41 Combinatory and segregatory coordination

Order in Phrasal Coordination

The relatively fixed order for subclasses of adjectives in premodification does not apply to coordinated strings, whether or not a coordinator is present. But the order of conjoined words can be influenced by a tendency for the shorter word to come first, e.g., big and ugly, cup and saucer.

There are also stereotyped coordinations where the conjoints are in virtually irreversible order, e.g., add and end; bread and butter; law and order; by hook or by crook; through thick and thin; knife, fork, and spoon.

Combinatory and segregatory coordination

9.41

When conjoined phrases function in the clause, they may involve combinatory or segregatory coordination (of 7.21 f, 9.30). The distinction applies to various types of conjoined phrases, but is perhaps clearest with noun phrases. When the coordination is segregatory, we can paraphrase the original sentence with two or more coordinated clauses. For example,

John and Mary have a cold

is equivalent to

John has a cold and Mary has a cold

But no analogous paraphrase is available for the combinatory coordination in

John and Mary make a pleasant couple

Other examples of combinatory coordination:

He gave all his books to Tom and Alice
Mary and Susan are sisters

Among adjectives involving combinatory coordination, colour adjectives in particular allow a 'particoloured' interpretation:

Our flag is red, white, and blue ('partly red, partly white, and partly blue')

In

He painted the cars black and white

there is a combined process if each car is painted black and white, and separate processes if some cars are painted black and others white.

Note

[a] The distinction applies also to plural or collective noun phrases. Hence we find combined process in They look alike and separate process in The children have a cold.
9.42 Certain markers explicitly indicate that the coordination is segregatory: 
both, each, neither . . . nor, respective (formal), respectively (formal).
While John and Mary have won a prize is ambiguous, we are left in no 
doubt that two prizes were won in

John and Mary each have won a prize
John and Mary have each won a prize
John and Mary have won a prize each
Both John and Mary have won a prize
John and Mary both have won a prize
John and Mary have both won a prize

Similarly, while John and Mary didn't win a prize is ambiguous, the sen-
tence Neither John nor Mary won a prize makes it clear that two prizes are 
involved.

Respective is used as a pre-modifier in a plural noun phrase to indicate 
separate processes. For example, John and Bob visited their respective 
uncles can only mean that John visited his uncle or uncles and that Bob 
visited his uncle or uncles. Separate processes are similarly indicated if 
the subject is a plural noun phrase: The boys visited their respective uncles.
The related noun phrases can even be in different clauses or in different 
sentences:

Bob and I have had some serious trouble at school lately. Our respective 
parents are going to see the principal about the complaints.

Respectively is used to indicate which constituents go with which in the 
separate processes, the order of one linked set corresponding to the 
order of the other linked set. For example:

John, Peter, and Robert play football, basketball, and baseball 
respectively

= John plays football, Peter plays basketball, and Robert plays 
baseball
John and Peter are going to Paris and to Amsterdam respectively

= John is going to Paris and Peter is going to Amsterdam

9.43 Coordination of identical items
Identical items may be conjoined an indefinite number of times. With 
comparatives of adjectives and adverbs susceptible of intensification or 
gradability, the effect is to express a continuing increase in degree (5.33):

He felt more and more angry = He felt increasingly angry
He drove slower and slower = He drove increasingly slowly

With verbs and the absolute forms of adverbs, the effect of coordina-
tion of identical items is to express a continuing or repetitive process:

They knocked and knocked (= They knocked repeatedly)
He talked on and on and on (= He talked on continuously)

If a noun is repeated once, the effect may be to suggest that different 
types can be distinguished:

There are teachers and teachers (= There are good and bad teachers)

9.44 Structures relating to coordination
There are several quasi-coordinators, most of which are related to 
comparative forms (11.37ff):

as well as, as much as, rather than, more than

They sometimes resemble coordinators:

He publishes as well as prints his own books
He was pitied rather than disliked

But they can also have a prepositional or subordinating role, as in

As well as printing the books, he publishes them
Rather than cause trouble, I'm going to forget the whole affair

In subject position they do not normally bring about plural concord un-
less the first noun phrase is plural:

John, as much as his brothers, was responsible for the loss

In this respect, they resemble prepositions such as with or in addition to:

John, with his brothers, was responsible for the loss

Non-restrictive relative clauses have been considered as semantically 
equivalent to coordinate clauses. Such an assignment seems reasonable 
when the relative clause has the superordinate clause as its antecedent 
(13.12). Thus,

John didn't go to the show, which is a pity

is semantically equivalent to

John didn't go to the show, and that is a pity
Apposition

9.45
Apposition resembles coordination in linking units having grammatical affinity. But, in addition, for units to be apposites, they must normally be identical in reference or else the reference of one must be included in the reference of the other. For example, in

A neighbour, Fred Brick, is on the telephone

a neighbour is identified as Fred Brick. The relationship underlying apposition is therefore an intensive relationship (7.6):

Fred Brick is a neighbour

In many cases the co-reference and grammatical similarity will permit the omission of either appositive unit with a resultant acceptable and synonymous sentence.

A neighbour is on the telephone
Fred Brick is on the telephone

This is true even where, as commonly, the apposites are discontinuous:

An unusual present awaited him, a book on ethics
~ An unusual present awaited him
~ A book on ethics awaited him

In some of the attribution examples (9.54), where an additional clause element is present in one of the units, it is not possible to meet the condition:

Norman Jones, at that time a student, wrote several novels

Nor is it possible in other instances where the apposition is only partial:

The reason he gave, that he didn't notice the other car, was unconvincing

where The reason he gave was unconvincing is not synonymous with That he didn't notice the other car was unconvincing. The two appositives need not have the same grammatical form to meet this condition. Thus, in the following sentence one of the appositives is a noun phrase, the other a non-finite clause:

Playing football on Sunday, his favourite exercise, kept him fit

9.46
Non-restrictive and restrictive apposition

Apposition may be NON-RESTRICTIVE or RESTRICTIVE (cf 13.3). The appositives in non-restrictive apposition are in different information units, and the two appositives have different information value, one of them being subordinate in the distribution of information. Non-restrictive apposition is indicated in speech by separate tone units for the appositives and in writing by commas or more weighty punctuation, with one of the appositives marked as parenthetic. For example, the apposition is non-restrictive in

Mr Campbell, the lawyer, was here last night
while it is restrictive in

Mr Campbell the lawyer was here last night (ie Mr Campbell the lawyer as opposed to any other Mr Campbell we know)

9.47
More than two units

Occasionally there may be more than two units in apposition, as in

They returned to their birthplace, their place of residence, the country of which they were citizens

There may also be a hierarchy of appositional relationships, indicated in the following sentence by the various types of bracketing:

We now find {a new type of student: [the revolutionary = { (the radical bent on changing the system) and (the anarchist bent on destroying it) } ]}

9.48
Indicators of apposition

A number of expressions explicitly indicate apposition. They can be inserted between appositives, for example namely

The passenger plane of the 1980s, namely the supersonic jet, will transform relations between peoples of the world

The indicators express certain semantic relationships between the appositives and therefore cannot be used for all cases of apposition. Common indicators are listed below, those marking the same or similar relationship being grouped together.

that is to say, that is, ie (formal and written); namely, viz (formal and written); to wit (formal, especially legal); in other words; or, or rather, or better; and as follows; for example, for instance, eg (formal and written), say, including, included, such as; especially, particularly, in particular, notably, chiefly, mainly, mostly; of

Some of these indicators either precede or (less commonly) follow the second appositive:
The President of the United States, in other words Richard Nixon, was on television last night. The President of the United States, Richard Nixon in other words, was on television last night.

But others can only precede the second appositive: namely, and, or (rather) better, as follows, including, such as, of, and the abbreviated forms, i.e., viz., and e.g.:

Many professions, such as the legal profession, have established their own codes of professional conduct.

 Included can only follow the second appositive:

Many people, my sister included, won't forgive him for that.

**Non-restrictive apposition**

Apposition is typically exemplified by noun phrases in non-restrictive apposition. The semantic relationships between the appositives are displayed below, with one or two representative indicators of relation:

- **Equivalence**
  - (i.e., in other words)
  - appellation (namely; who/which + be)
  - designation (who/which + be)
  - identification (nominally)
  - reformulation (or)

- **Attribution**
  - who/which + be

- **Inclusion**
  - exemplification (for example)
  - particularization (especially)

**9.50 Appellation**

With appellation, there is unique reference between the two appositives. Both appositive noun phrases are commonly definite and the second is typically a proper noun, but need not be:

The company commander, (that is to say) Captain Madison, assembled his men and announced their mission.

The second appositive can be replaced by a corresponding relative clause:

The company commander, who was Captain Madison, assembled his men and announced their mission.

It is more specific than the first, and hence the use of namely, an indicator that introduces a more specific appositive:

**9.52 Identification**

The passenger plane of the 1980s, (namely) the supersonic jet, will transform relations between peoples of the world.

The second appositive is often a finite clause:

He told them the good news: (namely) taxes are to be reduced.

**9.51 Designation**

With designation, there is also unique reference, but the second appositive is less specific than the first. Both appositives are commonly definite noun phrases:

Captain Madison, (that is to say) the company commander, assembled his men and announced their mission.

Replacement of the second appositive by a corresponding relative clause is again possible.

**9.52 Identification**

With identification, there is no unique equivalence. The second appositive is more specific, identifying what is given in the first, which is typically an indefinite noun phrase:

A company commander, (namely) Captain Madison, assembled his men and announced their mission.

Unlike the two previous types of equivalence apposition, replacement of the second appositive by a corresponding relative clause is not possible. A similar relationship obtains if the first appositive is, or contains, a pronoun referring to the second appositive:

We – (that is to say) John and I – intend to resign.

**Note**

[a] There are obvious affinities between the second example of identification apposition and substitution constructions (restricted to informal spoken English) containing a pronoun and an appended noun phrase to which the pronoun refers (14.58):

He's a complete idiot, that brother of yours
It went on far too long, your game

On a somewhat similar construction in familiar or dialectal use – He's a complete idiot, John is – see 14.38.

There are also similarities between non-restrictive apposition and extraposed constructions with anticipatory it (14.25f):

It was good to see you again

[b] We sometimes have the converse of the substitution referred to in Note a: anticipatory substitution. In this type of construction (also restricted to informal spoken
9.53
Reformulation
Reformulation is a rewording in the second appositive of the content of the first.
If the reformulation is based on linguistic knowledge, the second appositive is a synonymous expression:
a terminological inexactitude, in other words a lie sound units of the language, technically phonemes
An example with appositive adjectives:
He drew a triacontahedral, or thirty-sided, figure
A synonymous word or phrase may replace the first formulation in order to avoid misinterpretation or provide a more familiar or a more technical term.
In addition to the markers it shares with other types of reformulation, this type admits a large range of expressions that specifically mark linguistic reformulation, eg:
(more) simply, to put it simply, in more technical terms, technically (speaking)
Apposition involving linguistic reformulation includes translations from foreign languages:
savoir (know in English)
If the reformulation is based on knowledge about the external world, the second appositive is a co-referential expression:
Fred – or Ginger as he is usually called
The United States of America, or America for short
The reformulation may be a correction of what was said. The correction may be due to an attempt at greater accuracy and precision in formulation:
His party controls London, Greater London that is to say

9.54 Attribution
Examples with appositives other than noun phrases:
She is happier, very much happier, than he is
Thirdly and lastly, they would not accept his promise

9.54 Attribution
Attribution involves predication rather than equivalence. We can replace the second appositive by a corresponding relative clause. The second appositive is commonly an indefinite noun phrase:
The house, an imposing building, dominated the street
But it can be definite:
Many soldiers, the cream of the battalion, died in the attack
Certain kinds of construction are found only in attributive apposition:
(1) An article is absent from the second appositive:
Robinson, leader of the Democratic group on the committee, refused to answer questions
This type is common in newspapers and magazines.
(2) An adverbial that is a clause constituent is added to the second appositive:
Your brother, obviously an expert on English grammar, is highly praised in the book I am reading
(3) The second appositive has an internal structure of subject and either complement or adjunct. The participle being can be inserted between the two constituents of the appositive:
Jones and Peters, both (being) of unknown address, were charged with the murder of Williamson
At the entrance there are two pillars, one (being) on each side
Note
An attribution appositive is to be distinguished from a verbless adverbial clause (11.5) of which the following are examples:
An even-tempered man, Paul nevertheless became extremely angry when he heard the news (‘Though he was an even-tempered man’)
The heir to a fortune, his friend did not need to pass examinations (‘Since he was the heir to a fortune’)
These constructions differ from identification appositives (9.52) in that when they occur initially the subject of the sentence is not marked off from the predicate by intonation or punctuation separation.
9.55
Inclusion
Inclusion applies to cases of apposition where the reference of the first appositive is not identical with that of the second, but instead includes it. There are two types of inclusion: exemplification and particularization.

In exemplification, the second appositive exemplifies the more general term in the first appositive:

*His excuses, say the breakdown of his car, never seemed plausible*.

The explicit indicators of exemplification apposition are those in the group headed by *for example* in 9.48. Sometimes there may be ambiguity between exemplification and identification (9.52) if no indicator is present:

_Famous men (De Gaulle, Churchill, Roosevelt) have visited this university_*

The two types of relationship are distinguished by the explicit indicators. Unlike exemplification, particularization requires an explicit indicator:

_The children liked the animals, particularly the monkeys_*

The explicit indicators of particularization apposition are those in the group headed by *especially* in 9.48. We should perhaps include here instances where a numeral or quantifier in the second appositive indicates the particularization (cf 9.54):

_The two men, one a Dane, were awarded medals_*
_The soldiers, some drunk, started fighting each other_*

9.58
Restrictive apposition

Restrictive apposition of noun phrases can take three forms of which the first is the most common:

1. The first appositive is the more general expression and is preceded by a definite determiner (and possibly premodifier):

   _that famous critic Paul Jones, the number three/ the novel Great Expectations, my good friend Bob_*

2. The second appositive is preceded by a determiner, always the, and is more general than the first, as in _Paul Jones the critic_.

3. Type 3 is like (1) but with omission of the determiner (esp AmE):

   _Critic Paul Jones, Democratic leader Robinson_*

For titles with personal names, such as _Professor Brown_, see 4.25 for geographical names, see 4.27.

9.57
An important use of the first form of restrictive apposition is found with citations and names of books, films, etc:

_the term 'heavy water', the word 'if', the novel Crime and Punishment_*

The first appositive is often absent:

_If* is a conjunction

_'John and Mary’ is a coordinated noun phrase

_I’m reading Crime and Punishment_*

In such cases, we may assume an ellipsis of some general phrase such as 'the expression' or 'the citation form', or of an appropriate term in the case of titles, such as 'the book'. The singular number concord with 'John and Mary' can only be explained if we assume the ellipsis of a singular first appositive. (For further examples see 7.21.)

9.58
Restrictive apposition is common with such general noun phrases as _the fact, the idea, the view_*:

_The fact that he wouldn’t betray his friends is very much to his credit_;
_I don’t agree with the view that there is no advantage in being patient_;
_The question whether to confess or not troubled him_;
_Your duty to report the accident takes precedence over everything else_*

With participle clauses, and sometimes with _wh_-clauses, _of_ is used as an indicator:

_The thought of playing against them arouses all my aggressive instincts_;
_He didn’t accept the idea of working while he was studying_;
_His account of what he had done that year did not satisfy his colleague_*

Bibliographical note
Some recent contributions to coordination in general: Gleitman (1965); Hudson (1970); Karlson (1959); Lakoff, R. (1971); Stockwell et al (1973), Ch 6. On the distinctions between coordinators, subordinators, and conjuncts, see Greenspan (1969).
Factors in sentence connection

19.1
There are many factors that interact in pointing to links between sentences. We illustrate this by examining a single paragraph. For ease of reference, the sentences are numbered.

[i] We sometimes thoughtlessly criticize a government announcement which refers to 'male persons over the age of eighteen years'. [ii] What ridiculous jargon, we think; why couldn't this pompous official have used the word 'man'? [iii] But the official may be forced into a jargon by the lack of precision of ordinary words. [iv] 'Man' may seem to be exactly the same as 'male person over the age of eighteen years', but would the latter be our automatic interpretation if the word 'man' had been used? [v] We often use it of even younger males of sixteen or seventeen, and it can be applied to a school-boy of ten ('the team is a man short'). [vi] It may simply mean 'brave person', as when we tell a little boy of four to 'stop crying and be a man'. [vii] Or it may mean 'human being', without regard to sex, as in a phrase like 'not fit for man or beast'. [viii] It may even mean a wooden disc - as in the game of draughts.

We shall refer to three factors that enter into sentence connection in the above paragraph: implication in the semantic content, lexical equivalence, and syntactic devices.

In speech, there are also prosodic features of connection (14.2 ff., App II.9, 11), which are ignored in the present treatment.

10.2
A reader searches for semantic relationships implied between sentences that are next to each other. For example, he finds that sentences [vi], [vii], and [viii] present a series of alternatives linked to the joint content of [v], but only in [vii] do we find the coordinator or marking the alternatives.

10.3
We can expect successive sentences to show some relationship through their vocabulary, some equivalence in the lexical items. The simplest form for such lexical equivalence is through the repetition of words or phrases. For example 'man', which first appears in [ii], recurs twice in [iv], and once in [v], [vi], and [vii].

Lexical equivalents are often synonyms or near-synonyms. Of course, the whole point of the paragraph is the degree of closeness in meaning between 'male persons over the age of eighteen years' - [i] and [iv] - and 'man'.

However, the lexical equivalents need not be synonyms. A more general term may be used as the equivalent of a more specific term (human being [vii] - man or woman). Or the relationship may be established in the context (a government announcement in [i] - this pompous official in [ii]). Or (to go outside the present illustration) it may depend on factual knowledge or pre-suppositions that the speaker assumes that his audience shares with him (Paris - the capital of France / the youth - the nation's most precious asset).

Furthermore, lexical connection between sentences may involve antonyms. For example, the connection between the following two sentences is largely dependent on the antithesis between men and women:

Discrimination is undoubtedly practiced against women in the field of scientific research. We don't find men complaining that they are not being interviewed for positions that they are clearly qualified to fill.

Finally, lexical items belonging to a particular set of items tend to co-occur. For example, birth and baby:

We heard that the birth was easy. The baby is smaller than expected, but is in good health.

10.4
Our illustrative paragraph also contains syntactic devices for sentence connection. As we have said, man appears in five of the sentences. But 'man' as a word is also referred to by the pronoun it - twice in [v] and once in each of [vi], [vii], and [viii]. Thus man and its equivalents, lexical or syntactic, form a motif running through the paragraph.

In what follows we shall be primarily concerned with syntactic devices that help to connect sentences.

10.5
Time relations

10.5
Time-relationships between sentences can be signalled by temporal adjec-
tives or adverbials or by tense, aspect and modality in verbs. Once a time-reference has been established, certain adjectives and adverbials may order subsequent information in relation to it. There are three major divisions of time-relationship:

(1) previous to given time-reference:

**ADJECTIVES:** earlier, former, preceding, previous

*eg* He handed in a good essay. His *previous* essays were all poor. ('previous to that good essay')

**ADVERBIALS:** already, as yet, before, earlier, first, formerly, previously, so far, yet; phrases with pro-forms: before that, before then, until now

*eg* I shall explain to you what happened. But *first* I must give you a cup of tea. ('before explaining what happened')

(2) simultaneous with given time-reference:

**ADJECTIVES:** contemporary, simultaneous

*eg* The death of the president was reported this afternoon on Cairo radio. A *simultaneous* announcement was broadcast from Baghdad. ('simultaneous with the report of the death of the president on Cairo radio')

**ADVERBIALS:** at present, at this point, meantime, meanwhile, in the meantime, now, presently (esp AmE), simultaneously, then, relative when

*eg* Several of the conspirators have been arrested but their leader is as yet unknown. *Meanwhile* the police are continuing their investigations into the political sympathies of the group. ('at the same time as the arrests are being made')

(3) subsequent to given time-reference:

**ADJECTIVES:** following, later, next

*eg* I saw him on Friday and he seemed to be in perfect health. The *following* day he died. ('following the Friday just mentioned')

**ADVERBIALS:** afterwards, again ('after that'), immediately, later next, since, then, after that

*eg* The manager went to a board meeting this morning. He was *then* due to catch a train to London. ('after the board meeting')

10.9 Logical connectors

Words with temporal significance do not always have a connective function. Thus, somebody may say

John's *previous* wife died last year

without any prior mention of John's subsequent or present wife.

10.6

The ordinals constitute a temporal series of adjectives: *first*, *second*, *third* . . . , with *next* as a substitute for any of the middle terms when moving up the series, and *final* or *last* as a substitute for the term for the end of the series. There is a corresponding series of adjectives with *first* (also *at first* and, less commonly, *firstly*) as the beginning of the set; *next*, *then*, *later*, *afterwards*, as interchangeable middle terms; and *finally*, *lastly*, or *eventually* as markers of the end of the set.

10.7

Tense, aspect, and modality are discussed in 3.26 ff. Here we merely illustrate two features of the more obvious time-relationships signalled by these features of the verb phrase:

**He** telephoned the police. There had been an explosion.  
**Alice** turned on the radio. John was taking a shower.

The past perfect of the verb in one sentence and the simple past in the other fix the temporal sequence of the information conveyed in the two sentences of [1]. The past perfect form allows the two sentences to appear in reverse sequence without any obscurity. In [2] the verb forms indicate that the action described in the first sentence took place during that described in the second sentence.

10.8 Place relatives

Words denoting place-relationship can play a part in sentence connection:

He examined the car. The *front* was slightly damaged. ('*front of the car*')

A few place adverbs, *here*, *there*, and relative *where*, are pro-forms, *eg*:

All my friends have been to Paris at least once. I am going *there* next summer for the first time. ('to Paris')

Logical connectors

10.9

**And**

The possible relationships between sentences linked by *and* are in general
the same as those between clauses linked by and (9.16). And can link its
sentence with a unit comprising several sentences, as in the following
example, where that does not refer merely to the preceding sentence:

It was a convention where the expected things were said, the
predictable things were done. It was a convention where the
middle class and the middle aged sat. It was a convention where
there were few blacks and fewer beards. And that remains the
Republican problem.

10.10
Enumeration
Enumerative conjuncts (8.53) indicate a listing of what is being said.
Other listing conjuncts are also used in the set, as furthermore in

He attacked the senator viciously, but he was never cauе or to the
committee. First, he was not an important enough figure.
Furthermore, his criticism of the senator was public knowledge.
Finally, there was no case for suggesting he was secretly infiltrating
the government.

The addition of far more importantly in the following indicates that the
statements are listed in ascending order of importance:

Tom Brown is well known in this city. He has been a member
of the city council for many years. Secondly, far more
importantly, he is a football player of national reputation.

There are several climactic additive conjuncts that mark the end of an
ascending order: above all, on top of it all, last but not least.

We can indicate a descending order at the beginning of the series by
such expressions as first and foremost, and first and most importantly.
Most importantly and most important ly can occur either at the
beginning or at the end of a series; they mark by their position whether
the series is in ascending or descending order of importance.

It is obvious that first, second, third, etc. mark particular
positions in a series. To begin with, start with, and (informally) for a
start can occur initially in a series, next, and then only mediately, and
last, finally, and (rather formally) to conclude only in final position.
Reasons for what has been said can be linked by the correlative,for one
thing ..., and (and) for another thing ..., though the first of the pair can be used
alone if the intention is to offer only one reason.

The enumeration may be expressed in ways that are more integrated
within the structure of the sentence, as in the following formulaic expressions
that are typical of formal spoken English:

I want to begin by saying ..., I will conclude by saying ...

10.13 Transition
The introductory expression may be related more closely to the preceding
lexical content, as in One reason is ..., the other reason is ... We might
even have a main clause that serves as a link in the enumeration, eg:
There is still another thing or I want to make one final point.

Noun phrases alone can be used for enumeration as well as the fuller
forms, eg: another thing, one final point.

Addition
10.11
The addition relationship is often conveyed by the two subclasses of
additive conjuncts, reinforcing and equative conjuncts (8.53):

This food is very good and it's probably something that people
wouldn't get at home. Also, it's not difficult to cook and it's
quick to prepare.

There has been no progress in the negotiations between the union
and the employers. The union is determined to get more than the
employers have proposed. Equally, the employers have absolutely
no intention of increasing their final offer.

10.12
Additive adjuncts (8.8 ff) specify that part of the sentence is an addition
to what has been previously mentioned or implied:

The children read the play. They acted it too.
He didn't explain what the letter signified. Neither/Nor did she.

Either, neither, and nor (9.20) differ from the others in requiring the two
sentences they link to be negative but no other negative appears in the
sentence containing neither or nor. Too, on the other hand, generally
requires both to be positive. Thus, in the following sentences, either,
neither, and nor are admissible (as are other additive adjuncts, such as also),
but not too:

A: The children didn't read the play. B: They didn't act it too.
A: The children didn't read the play. B: They also didn't act it.
A: The children didn't read the play. B: They didn't act it either.
A: The children didn't read the play. B: Neither/Nor did they act it.

10.13 Transition
Now introduces a new stage in the sequence of thought:
We have settled that at last. Now, what was the other thing we wanted
to discuss?
As for (in BrE also as to) introduces a related topic:
Mary has several close friends. As for John, he is always surrounded by friends.

Certain other expressions mark a transition, but they can also begin discussion: with reference to, with respect to, with regard to (all formal). Incidentally and by the way add explicitly that what is being said is a digression:

The airlines charge half-price for students. Incidentally, I have already bought my ticket to New York.

Certain other expressions are commonly used for marking a transition to a new stage: Let us now turn to... (formal), Regarding... (formal), To turn to...; or to introduce a digression: Talking/Speaking of...; That reminds me, ...

10.14 Summation
The final part of a unit may be a generalization or summing-up of what preceded. Summative conjuncts (8.53) and style disjuncts such as in brief (8.48 f) can be used to indicate this:

The techniques discussed are valuable. Sensible stress is laid upon preparatory and follow-up work. Each chapter is supported by a well-selected bibliography. In all, this is an interesting and clearly written textbook that should prove extremely useful to geography teachers.

Integrated expressions include I will sum up by saying, I shall conclude by saying.

10.15 Apposition
Indicators of an apposition (9.48) can be used to refer back to previous sentences:

It is important that young children should see things and not merely read about them. For example, it is a valuable educational experience to take them on a trip to a farm.

Integrated indications of certain types of apposition include Another way of putting it is...; An example would be...

10.16 Result
Several result conjuncts (8.53) indicate that a sentence expresses the consequence or result of what was said before.

They don't often use it over the weekend. So you can borrow it if you want to.
They refused to pay the higher rent when an increase was announced. As a result, they were evicted from their house.

Integrated indications include The result (of that) is...; The consequence (of that) was...

10.17 Inference
An inference from what is implicit in the preceding sentence or sentences can be indicated by an inferential conjunct (8.53):

A: I'm afraid there isn't much I can help you with.
B: In other words, you don't want to be bothered.
A: He says he wants to marry Susan.
A: In that case, he shouldn't be quarrelling with her all the time.

Other markers of inference include If so, If not, That implies...; You can conclude from that...

10.18 Or: Reformulation and replacement
Or introduces a reformulation (a type of apposition, 9.53) or replacement. It can be followed by conjuncts that have the same function, or the alone can be used.
Examples of reformulatory conjuncts (8.53):

They are enjoying themselves. (Or) Rather, they appear to be enjoying themselves.
You say you took the book without his permission. (Or) In other words, you stole it.

Integrated markers of reformulation include A better way of putting it is...; It would be better to say...

Examples of replacive conjuncts (8.53):

I might do it, Or again, I might not.
In order to buy the car, I may draw on my savings, though I am reluctant to do so. (Or) On the other hand, I might approach my parents for a loan.

Integrated markers of replacement include The alternative is...; It might be better if...

10.19 But
The relationships between sentences linked by but are the same as those
between clauses linked by but (9.18), though the contrast may be with a preceding unit consisting of more than one sentence:

More than one marriage had its beginnings in the Princess Theatre; more than one courtship was extended and perpetuated there. And it would be fair to say that a number of lives were shaped, to a degree, by the figures and fashions and personalities that flashed upon the screen. But years have a way of doing strange things to people, times and events and now the old Princess is little more than a misty memory.

10.20 Contrast
A contrast can be indicated by antithetic conjuncts (8.53). On the contrary emphasizes that the opposite is true:

I didn’t ask her to leave. On the contrary, I tried to persuade her to stay.

The other conjuncts introduce a comparison or contrast, without entailing a denial of the validity of what preceded:

He’s rather foolish, I’m afraid. By comparison, she’s a genius.

A cut of one quarter in the total wages bill would bring only a five per cent saving in the ship’s final cost. By contrast, the price difference between British and Japanese tankers is now as much as 25 per cent.

On the other hand often indicates contrast, especially when it is the second of a correlative pair with on the one hand:

On the one hand, you don’t want to be too aggressive. On the other hand, you shouldn’t be too timid.

Instead involves a contrast, though it also indicates a replacement. The conjunct is illustrated in

He doesn’t study at all. Instead, he sits and day-dreams.

and the adjunct in

He wanted a fishing-rod for his birthday. His father bought him a book instead. (‘instead of a fishing-rod’)

Concession

10.21
Concessive conjuncts (8.53) signal the unexpected, surprising nature of what is being said in view of what was said before:

10.23 Concession

He has been in office for only a few months. He has, however, achieved more than any of his predecessors.
The term papers were very brief. Still, they were better than I expected.

I didn’t invite your friend Bill to the party. Besides, he wouldn’t have come.

Most of the concessive conjuncts can be paraphrased by a concessive subordinate clause introduced by though or although; for example, with the first pair of sentences above: Though he has been in office for only a few months, he has achieved more than any of his predecessors. Besides, anyhow (informal), and anyway (informal) indicate that an addition is being made to a process of reasoning, but they are at the same time concessive. With besides the additive implication is particularly prominent: it could be paraphrased: ‘If you don’t find that point convincing, here’s another point.’ At any rate may be roughly paraphrased as ‘whatever happens’ or ‘regardless’, and after all as ‘this at least must be conceded’. When else (following the conjunction or) is a concessive conjunct, it is equivalent to ‘even if not’.

Even is a concessive adjunct, but it is also additive:

Even John was there (John was there (surprisingly) in addition to others)
John will even sing a song if you ask him (John will sing a song in addition to other things he will do)

10.22
Certain disjuncts that assert the truth of their sentence are often used to express some notion of concession, roughly equivalent to ‘this at least is true’. They include the attitudinal disjuncts actually, admittedly, certainly, really, in (actual) fact, of course (8.50), and the style disjunct strictly speaking. Sometimes the reservation is about a preceding sentence:

I wasn’t called up by the army. Actually, I volunteered.

But the reservation may relate to what follows, and in such a case but or a concessive conjunct is often found in the next sentence:

Of course, the book has some entertaining passages about the private lives of film stars. But on the whole it is extremely boring.

Integrated markers of this relationship include I admit . . ., It is true that . . .

10.23
Several attitudinal disjuncts suggest that the context of the sentence to which they are related may not be true in reality eg: nominally, officially,
technically, theoretically (8.50). A following sentence, which may then indicate what is said to be the real truth, may be marked for this purpose by actually, really, in (actual) fact, or in reality. For example:

officially, he is in charge. Actually, his secretary does all the work.

Integrated markers of this relationship include The official position was . . . , The theory was . . .

10.24

For

The conjunction for (formal and usually literary) indicates that what is said is the reason for mentioning what has been said previously:

The vast majority of the competitors will be well content just to walk around at their own pace, stopping for rest or refreshment as required. For it is a long day’s walk, and there is much to be said for enjoying the scenery at the same time.

Substitution

10.25

Like ellipsis (9.1), substitution is a device for abbreviating and for avoiding repetition. Most of the substitutes or pro-forms within sentences are also used across sentences. They are normally unstressed. Hence, though a nucleus is commonly on the last word of a clause, it would not be usual to have a nucleus on a pro-form (App II.7). Contrast:

John upset a large beautiful vase. It fell and hurt Bob.

A large beautiful vase fell on Bob’s head. It was very heavy and hurt him.

Pro-forms for noun phrases and their constituents

10.26

The most obvious pro-forms for noun phrases are the 3rd person pronouns:

John and Mary stole a toy from my son. Their mother told them to return the toy, but they said it was theirs.

Dr Solway took the student’s blood pressure that day. He also examined his lungs and heart.

It will be noticed that he substitutes for Dr Solway and his for the student’s. We interpret the appropriate substitutions from the content of the sentences. For example, we can change the second sentence to transfer the substitutions:

Dr Solway took the student’s blood pressure that day. He had felt sick during the night and came for his help as soon as the clinic opened.

In the second sentence, he now substitutes for the student, and his: for Dr Solway’s. Where the reference of the pronoun is felt to be ambiguous, the full form or a lexical equivalent can, of course, be used.

The plurals of the 1st and 2nd person pronouns sometimes have as their antecedent a noun phrase and can then be considered pro-forms:

John and I have finished our work. Can we start our lunch now?

A somewhat different situation exists when the ‘antecedent’ noun phrase does not include the pronoun appearing in the next sentence:

You and John seem to be finished. Shall we have lunch now?

We here substitutes for an implied you and John and I: see further 4.82. The singulars of the 1st and 2nd person pronouns are never pro-forms for noun phrases: they merely replace themselves.

10.27

One can be a pro-form for a noun phrase head or for an indefinite noun phrase (4.96). Certain other items can be pro-forms for noun phrases, in particular ain, any, both, each, either, neither, same, none. They can be regarded as elliptical, since they can be expanded by of with some appropriate prepositional complement:

The boys applied for a scholarship. Each (of them) was able to present excellent references.

You told me there were three pictures by Van Gogh in the exhibition. But I didn’t see any (of his pictures).

My friends intend to make a career in business. None (of my friends) want to go to university.

There is an equivalent expansion which converts the pro-forms into determiners or pre-determiners. This affects all, both, each, either, neither, as in all the boys, each boy.

The same is a pro-form for a noun phrase. The phrase it replaces must be identical with the antecedent, but (except in dialect or archaic use) the two phrases are usually not co-referential:

A: Can I have a cup of black coffee with sugar, please?
B: Give me the same, please.

10.28

Pro-forms for adverbials

Some time relaters (10.5) can be pro-forms for time adjuncts, principally
then ("at that time"), but also that when it functions as subject and when the verb is intensive:

We saw John at eight on Monday evening. We told him then that we
would be coming to the party.
A: I'm meeting George for a drink this evening.
B: That would be the best time to raise the subject.

Some place relatives (10.8) can be pro-forms for place adjuncts, principally here ("at/to this place"), and there ("at/to that place"), but also that ("that place") and it ("that place") when they function as subject and when the verb is intensive:

Look in the top drawer. You'll probably find it there.
They sat right in front of the stage. That/It/There was where the noise
was greatest.

The most common pro-forms for process adjuncts (8.19 ff) are in that way, that way (informal) and like that:

She plays the piano with great concentration and with great energy.
I'm afraid she doesn't study like that ("with great concentration ..."
Always be frank and open to your colleagues. That way you'll win
their trust and confidence ("by always being frank ..."

Pro-forms for predicate and predication

10.29

Auxiliaries as pro-forms

Do is a pro-form for the predicate and carries tense and person distinctions:

A: John drives a car. B: I think Bob does too (= drives a car).

When functioning as operator for negation, interrogation, or emphasis
(3.25), do can be considered as allowing ellipsis of the predication:

A: John drives a car. B: Bob doesn't (drive a car).

But it is convenient to treat cases of ellipsis together with the pro-form do.

Other operators and auxiliaries allow ellipsis of the predication, but can also be treated together with the pro-forms:

A: John can drive a car. B: I think Bob can (drive a car) too.
A: Was the entire building destroyed? B: Yes, it was.
A: Have they seen the play? B: No, they haven't (seen the play).
A: I'm hungry. B: Are you (hungry)?

There can be combinations of operator and auxiliaries with such ellipsis:

A: Has the show started? B: It may have (started).

10.30 Complex pro-forms

A: Should she have been taking that medicine? B: Yes, she should
(have been (taking the medicine))).
A: I've paid for the tickets. B: You shouldn't have (paid for the
tickets).

and of an operator with lexical be or (especially for BrE) lexical have:

A: Mary is in Chicago. B: She can't be (in Chicago).
A: I wonder if you have a pen with you. B: I may have (a pen with me).

Note

[a] The rules of co-occurrence of auxiliaries are the same for both coordinated clauses
and coordinated sentences (9.24).
[b] There is also ellipsis with imperative do and don't:

A: Can I have a piece of cake? B: Please do (have a piece of cake).

10.30

Complex pro-forms

The substitute may be a complex pro-form: a combination of one or
two auxiliaries with the pro-forms so, that, or it.

The patterns of combination are exemplified below for declarative
sentences. For patterns (i) and (ii), lexical be, passive be, or (especially
for BrE, see Note a below) lexical have may combine with the pro-form
so.

[i] so do type: so + auxiliary [+ subject]
A: John drives a car. B: So does Bob.
A: Mary will enter the competition. B: So will Joan.A: Susan is obstinate. B: So is Sarah.
A: My car was washed this morning. B: So was mine.

(ii) so ... do type: so [+ subject] + auxiliary
A: Look! That man seems lost. B: So he does.
A: I've found the reference. B: So you have.

(iii) do so type: [subject +] (auxiliary +) do + so
A: Have you sent your donation? B: I did so yesterday.
Peter can join our group. I'm not sure whether David can do so.

(iv) do that type: [subject +] (auxiliary +) do + that
A: Do you know who broke the television set? B: I heard John
did that.
A: Sam called the meeting. B: No, I think Peter may have done
that.

(v) do it type: [subject +] (auxiliary +) do + it
A: Your brother said he was going to send a letter of protest to
the President. B: He did it last week.
A: Gerald has told your father what you said. B: He shouldn't
have done it.
In BrE many allow also the possibility of adding *do* alone to (a) a modal, or (b) perfect *have*:

(a) A: Will you be attending the meeting this evening?  
B: *I MAY do.*

(b) I didn't touch the television set. But *PERCY might have done.*

Note

[a] Lexical *have* admits the two pro-form phrases *so have* and *and so have* in addition to *have* alone:

A: John has a cold.  
B: *Yes, and I have too.*

This use of *have* is much more common in BrE than in AmE, where it is formal as well as restricted in use (cf 3.19). The pro-forms *do, so do, and so ... do* are also used in BrE, but are more common in AmE:

A: John has a cold.  
B: *Yes, and I do too.*

[b] *So* is used as a synonym for *true*, but in that use it is not a pro-form:

A: Joan has very many friends.  
B: That isn't so.

10.31

**PRO-FORMS IN RELATION TO VERB CLASSES**

All lexical verbs allow substitution by *do* or other auxiliaries and by the complex pro-form types *so do* and *so ... do*. But several of the verb classes established in 3.35 do not allow the full range of substitutions. For example, verbs of bodily sensation such as *feel* admit only the auxiliaries and the types *so do*, and *so ... do*:

A: John feels much better.

\[
\begin{align*}
& I \text{ KNOW he does} \quad (-I \text{ know he feels much better).} \\
& B: \quad \text{Yes, and so do I.} \\
& \quad \quad \text{Yes, so he DOES.}
\end{align*}
\]

But we cannot substitute for them the other three types – *do so, do that, and do it*:

A: John feels much better.

\[
\begin{align*}
& I \text{ KNOW he does so.} \\
& B: \quad \text{Yes, he DOES that.} \\
& \quad \quad \text{Yes, he DOES it.}
\end{align*}
\]

Only activity and momentary verbs (3.35) – with other parts of the predication, if any – can be replaced by the full range of pro-forms:

10.33

**CO-REFERENTIALITY OF SUBJECTS**

The *so do* type is used only if the subject of the clause is *not* co-referential with that of the antecedent clause:

A: John buys his drinks at the local supermarket.  
B: *So do we.*

On the other hand, the *so ... do* type is used regardless of whether the subjects of the clauses are co-referential or not, though it is more common for them to be co-referential:

A: John buys his drinks at the local supermarket.  
B: *So he DOES: I'd forgotten.*  
\[
\text{(So lots of other people do, I imagine.)}
\]
The other substitution types are used whether or not the subject is co-referential with that of the antecedent clause.

Note
In some contexts, so may be ambiguous between the pro-form so and the result conjunction so (=therefore). For the latter, see 10.16.

10.34
OPERATOR IN PRO-FORMS
The do so, do that, and do if pro-forms require an additional do as operator:

A: Do they buy their drinks at the local supermarket?
B: Yes, but we don't do so.
A: John swims a lot.  B: Does Bob do that?
A: Bill didn't damage his father's car.  B: Oh, but he did do it.

Contrast other constructions where the pro-form contains or is an operator:

A: Some people can drive.  B: Yes, but Peter can't.
A: Arnold has joined the club.  B: But has his wife done so?

10.35
EXCLUSION OF PRO-FORM TYPES FROM CERTAIN CLAUSES
There are severe restrictions on the occurrence of auxiliaries as pro-forms in non-finite clauses:

A: Peter hunts rabbits.  B:

*Yes, I have noticed him doing.
*Yes, I have watched him do.
*I know. He wanted me to do too.

Instead, we must use one of the complex pro-forms allowed by the particular verbs:

A: Peter hunts rabbits.  B:

Yes, I have noticed him doing so.
Yes, I have watched him do that.
I know. He wanted me to do it, too.

An alternative to the pro-forms with the to-infinitive clause is ellipsis of the infinitive clause, to alone being retained:

A: Peter hunts rabbits.  B: I know. He wanted me to, also.
Neither the so ... do nor the so do type can function in an imperative clause:

A: It's time to wash the dishes.  B:

*So (you) do.
*So do (you).
(You) Do so.

10.36
THE PRO-FORMS NOT AND SO
Pro-forms other than those from the so do and so ... do types are commonly used in questions and in negative sentences. Where the negative sentence adds to what has been negated previously, either is commonly appended, or neither/nor placed initially (with obligatory subject-operator inversion) to achieve negation (8.10, 9.20):

A: Bob can't drive a car.  B: No, John can't do that either.
Neither can John do that.

10.36
THE PRO-FORMS NOT AND SO
Not can be a negative pro-form for the predicate:

A: Bill would have taken the book.
B: Yes, but not Tom. (= Tom would not have taken the book)
A: Bob will take it for you.
B: No, not him. (= He will not take it for me)

In very formal speech the subjective case of the pronoun would be used instead of the objective case if the pronoun is the subject in the clause that is being replaced:

A: John is a coward.  B: Yes, but not I. (= I am not a coward)
Not can also be a pro-form for the subject and part of the predicate:

A: John wanted to pay for the tickets.
B: True, but not for the dinner. (= but John did not want to pay for the dinner)

Not in why not and if not is a negative pro-form for the whole clause, while so is the pro-form for the equivalent of the whole clause in the case of if so, and (less commonly) why so:

A: I don't want to go in.
B: Why not? (= Why don't you want to go in?)

So is used as a pro-form for a direct object clause:

Oxford is likely to win the next boat race. My friends say so.
(= that Oxford is likely to win the next boat race)

Not can often serve as the negative of so in this use:

Many people believe that there will be another world war before the end of the century. My father thinks so, but I believe not.
(My father thinks that there will be another .. . , but I believe that there will not be another ... )
In this use, **not** is restricted mainly to verbs of belief or assumption (cf. 11.58), while **so** extends also to some verbs of speaking. Verbs that commonly allow both **so** and **not** as pro-forms for the direct object clause include: assume, believe, expect, fancy, guess, hope, imagine, presume, suppose, think, understand.

So is also commonly used as a pro-form for a subject complement with the intensive verbs become, appear, seem; the last two also allow **not** as a pro-form:

A: I didn’t think she was exceptionally shy.  
B: She wasn’t at one time, but she has become so recently. (= become exceptionally shy recently)

A: Are they ready?  
B: It appears **not**. (= It appears that they are not ready)

Where transferred negation is possible (cf. 11.53), it is preferred in informal use: I don’t think so. The pro-form **not** is occasionally used with the verbs say and tell, but the use of the pro-form **so** with these verbs is much more frequent. Not all verbs of speaking allow even **so**. For example, we cannot say **He asked so**.

So in this use can take initial position with several verbs, particularly say (and also believe and understand, especially with I or we as subject):

So all my friends say So I understand

**Note**  
Tell requires the presence of an indirect object before the pro-form (cf. 12.31):

I told you so  
*I told so*

**Discourse reference**

**10.37**

There are a number of signals marking the identity between what is being said and what has been said before. They have been brought together here because they have in common a ‘deictic’ reference, that is to say, they point back (anaphoric) or forward (cataphoric) in discourse.

**10.38**

**Sentence/clause reference**

Common signals for sentence or clause reference:

- anaphoric and cataphoric: here, it, this
- anaphoric only: that, the foregoing (formal)
- cataphoric only: as follows, the following, thus

**Anaphoric examples**

Many years ago their wives quarrelled over some trivial matter, now long forgotten. But one word led to another and the quarrel developed into a permanent rupture between them. That’s why the two men never visit each other’s houses.

Many students never improve. They get no advice and therefore they keep repeating the same mistakes. It’s a terrible shame.

Students want to be shown connections between facts instead of spending their time memorizing dates and formulas. Reflecting **this**, the university is moving away from large survey courses and breaking down academic fences in order to show subjects relating to one another.

**Cataphoric examples**

This should interest you, if you’re still keen on boxing. The world heavyweight championship is going to be held in Chicago next June, so you should be able to watch it live.

Here is the news. A diplomat was kidnapped last night in London... (radio announcement)

It never should have happened. She went out: and left the baby unattended.

My arguments are as follows...

Above and below are used in formal written discourse to indicate where units of varying length and illustrations are to be found: the arguments given below (perhaps referring to several sentences), the diagrams below illustrate... There is no determinable limit to the distance between them and the place they refer to. The above is used with anaphoric reference (but *the below* has no corresponding use):

The above illustrates what we mean by...

**Note**

The non-restrictive relative clause with sentential antecedent (13.12) is sometimes made into a separate orthographic sentence:

She has borrowed a history book. Which suggests that her teacher is having some influence on her.

**Noun-phrase reference**

**10.39**

Certain determiners can be used to signal that a noun phrase is reference-equivalent to a previous noun phrase: the, this, these, that, those.

The noun phrases may have identical heads, but may be co-referential without the heads being identical:

He bought a battered, old black van in 1970. What a lot of money he earned with this vehicle.

Students are free to select optional courses from any field that touches on American studies. These options are very popular.
The co-reference of two noun phrases may be emphasized by use of identical, same, selfsame (formal), very:

He spoke to a meeting of striking workers that evening. Those same workers had previously refused to listen to his speeches.

These determiners and adjectives can be used to indicate identity of type rather than co-reference:

He bought a Jaguar XJ6. I ordered that same car the previous year.

Such (5.27) is used specifically to indicate identity of type:

They regularly get The Daily Courier. I wouldn't read such a paper.

Like plus that or those is also used anaphorically for identity of type, and postmodifies the noun-phrase head:

They regularly take The Daily Courier. I wouldn't read a paper like that.

Like this and (informally) this way are used cataphorically:

He told it this way: George was running down the road and...

The demonstratives can be used as pro-forms for noun phrases:

I hear that you dislike his latest novel. I read his first novel. That was very boring, too.

Normally, demonstratives replace noun phrases with a human referent only in intensive clauses with a nominal complement:

Will you try and help me find Peter Williams? That's the man I was telling you about.

Former and latter (both mainly formal written English) are used anaphorically to single out one of two previous noun phrases:

Both John and Tom had been at the meeting. The former brought his wife with him. ('Bob')

If the latter were used instead, the reference would be to John. These two terms can also be used as reference signals when they premodify:

Bill Singer and Tom Patterson were charged with being drunk and disorderly. The latter student had two previous convictions on such charges.

Similarly, when there are more than two previous noun phrases that might be referred to, the ordinals first, second, etc, and last can be used anaphorically to single out one of several phrases.

The ordinals and former and latter can also refer back to clausal units as well as noun phrases:

He explained that he had lost a lot of money and that he had also quarrelled with his wife. The former seemed to have upset him more than the latter.

So and (rather informally) that can have anaphoric reference when they are intensifiers premodifying an adjective:

There were two thousand people in the theatre. I didn’t expect it to be so (all) full.

Such is used more commonly than so or that when the adjective is in a noun phrase (cf. 5.27):

... I didn’t expect such a large audience.

Comparison

The most obvious comparison signal is found in adjectives and adverbs, whether in the inflected forms or in the periphrastic forms with more, most, as, less, least. If the basis of comparison (5.32) is not made explicit in the clause, it can often be inferred from the previous context:

Mary used to listen to records most of the time. Sally was a more hardworking student. (than Mary was)

There were ten boys in the class. Bob was by far the best. (of the ten boys in the class)

Likewise, we must often look at the previous context for the basis of similarity or difference:

John was the victim of a confidence trick. Bill was tricked in the same way. (as John was tricked)

Tom had to be sent home. However, the other boys had behaved well. (the boys other than Tom)

Ellipsis in dialogue

Ellipsis in dialogue may take place under three conditions, which can occur in various combinations:
(1) REPETITION: the second speaker repeats what is said by the first.
(2) EXPANSION: the second speaker adds to what is said by the first.
(3) REPLACEMENT: the second speaker replaces what is said by the first with new material.

There is usually a choice in repetition between ellipsis, substitution, and the full form. We show the choice, giving optional items in parentheses and alternatives in braces. The categorization is not intended to be exhaustive, but to give typical examples of ellipsis.

Note
Ellipsis in coordinated clauses is dealt with in detail in 9.21 ff, and much of what is discussed there applies to ellipsis across sentences. Ellipsis of predicate and predication has been discussed in the relevant sections in this chapter (10.29 ff). Moreover, other instances of what could be considered ellipsis have been referred to in the course of this chapter, eg 10.8, 10.27, 10.43. Some of the examples that we give for dialogue could, of course, equally occur in sentences spoken or written by the same person.

10.45
Question and response
The usual function of a question in discourse is to request the listener to respond verbally with information that the questioner seeks. The link between question and response is often reinforced by ellipsis in the response, thereby avoiding repetition of material from the question and focusing attention on what is new.

(1) REPETITION
A: Have you spoken to the doctor?
B: (Yes,) I have (spoken to (the doctor)).

(2) EXPANSION
A: Will they lose the game?
B: Probably (they will (lose (the game))).

(3) REPLACEMENT
This most commonly occurs with wh-questions (7.52 ff), where the Q-element is normally replaced in the response:
A: Who told your father?  B: Mary (told (my father)).

COMBINATIONS include expansion and replacement:
A: When did he lose the key?
B: Probably (he (lost (the key))) last night.

Where the response is merely repetition, yes alone is used as a substitute for repetition. No alone is a substitute for negation of repetition. Neither ellipsis nor substitution need be factors in the connection between a question and the response to it. For example:
A: Can I help you, madam?
B: Well, I'm looking for a pair of white gloves.

10.46
Statement and question
Questions are usually prompted by what was said before, though they may be stimulated by the situational context.

(1) REPETITION
A: I'm studying grammar.  B: ARE you (studying grammar)?

(2) EXPANSION
A: Peter will be there.
B: Are you (there) (of that (that (he) will (be there)))?

(3) REPLACEMENT
A: It cost me twenty-five dollars.
B: HOW much (did it cost (you))?  

COMBINATIONS include repetition and replacement:
A: John told me what you did.
B: WHO told you (what I did)?

10.47
Statement and statement

(1) REPETITION
A: He's studying Latin.
B: (He's studying) Latin! He doesn't know his OWN language.

(2) EXPANSION
A: He won't play.
B: I'd like to know why (he won't (play)).
(3) REPLACEMENT
   a: They want the key now.
   b: No, they want {the key} it tonight.

COMBINATIONS include repetition, expansion, and replacement:
   a: They paid fifty dollars for it.
   b: Oh no, they paid more {than} {fifty dollars} (for it).

10.48
Structural parallelism
If two or more sentences have identical or very similar structure, this parallelism connects the sentences, the connection being further reinforced by lexical equivalences and implications of semantic relationship (usually of contrast):

   John put his career before his family. Bill put his family before his career.

Devices of structural parallelism are particularly common in measured style. The parallel between sentences is more transparent (and hence the connection is more strongly indicated) if the word order is not the normal one, even if otherwise there is little structural similarity:

   My paintings the visitors admired. My sculptures they disliked.

An apparent similarity in structure is sufficient to suggest an affinity between sentences:

   My paintings the visitors admired. My sculptures irritated them.

The impression of a link between the two initial noun phrases (the first a direct object and the second a subject) is reinforced by the use of my in both phrases and the lexical set to which both painting and sculpture belong. The two sentences are further linked by semantic parallelism and by the pro-form them in the second sentence.

The last example above illustrates a combination of several devices: syntactic parallelism, semantic parallelism, lexical relationships, and substitution by a pro-form. The example serves to remind us of a point which we made at the beginning of the chapter, but which may have been obscured by our attention to devices in isolation: several devices—some of them perhaps syntactic—may be interacting to form links between sentences.

Bibliographical note

ELEVEN
THE COMPLEX SENTENCE

11.1 Coordination and subordination
Subordination is a non-symmetrical relation, holding between two clauses in such a way that one is a constituent or part of the other. Compare the coordination in

   1  1  2  2
   [I like John] and [John likes me]
   1  1  2  2
   ['independent'] ['independent']

with the subordination in

   1  2  2 1
   [I like John] [because John likes me]
   1  1  1 1
   ['superordinate' or 'independent' or 'main']
   2  2  2
   ['subordinate' or 'dependent']

The above examples also illustrate the terms commonly associated with the clausal units distinguished.

The device of subordination enables us to organize multiple clause structures. Each subordinate clause may itself be superordinate to one or more other clauses, so that a hierarchy of clauses, one within another, may be built up, sometimes resulting in sentences of great complexity. A relatively simple example:

   X Y Z Z Y X
   ( I think [ that you can do it [ if you try ] ] )

Here the clause beginning at Z is subordinate to the clause beginning at Y, which in turn is subordinate to the clause beginning at X. Both Y and
The complex sentence 11.2

Z are dependent clauses, while X is the independent clause, and is identical with the sentence as a whole: I as S, think as V, that: you can: do it as O, and if you try as A.

Dependent clauses may be classified either by structural type, i.e. in terms of the elements they themselves contain, or by function, i.e. the part they play in the superordinate clause.

11.2 Finite, non-finite, and verbless clauses

Analysing by structural type, we arrive at three main classes:

FINITE CLAUSE: a clause whose V element is a finite verb phrase (3.23)

eg: John has visited New York
   Because John is working, he . . .

NON-FINITE CLAUSE: a clause whose V element is a non-finite verb phrase (3.23)

eg: Having seen the pictures, he . . .
   For John to carry the parcels was a . . .

VERBLESS CLAUSE: a clause containing no V element (but otherwise generally analysable in terms of one or more clause elements)

eg: Although always helpful, he . . .
   John, then in New York, was . . .

All clauses—finite, non-finite, or verbless—may of course themselves have subordinate clauses which are finite, non-finite, or verbless. Eg the following verbless clause has a finite clause within it:

Although always helpful when his father was away, he . . .

11.3 Finite and non-finite clauses

The finite clause always contains a subject as well as a predicate, except in the case of commands (7.58 ff) and ellipsis (9.21, 10.44 ff). As nearly all independent clauses (in discursive English, though not in 'block language': 7.66) are finite clauses, it is these that are most closely related to the clauses dealt with in Chapter 7. In contrast, non-finite clauses can be constructed without a subject, and usually are. The four classes of non-finite verb phrase (3.23) serve to distinguish four classes of non-finite clause:

[I] INFINITIVE WITH TO
without subject: The best thing would be to tell everybody
with subject: The best thing would be for you to tell everybody

III INFINITIVE WITHOUT TO
without subject: All I did was hit him on the head
with subject: Rather than John do it, I'd prefer to give the job to Mary

III -ING PARTICIPLE
without subject: Leaving the room, he tripped over the mat
with subject: Her aunt having left the room, I declared my
   passionate love for Celia

[IV] -ED PARTICIPLE
without subject: Covered with confusion, I left the room
with subject: We left the room and went home, the job finished

When the subject of adverbial participial clauses is expressed, it is often introduced by with:

With the tree (growing) : all, we get more shade

The normal range of clause types (7.2) is available, with active and passive forms broadly as in the corresponding finite clauses, but there is a restriction on the -ed participial clause, which is both syntactically and semantically passive, and therefore admits only the four passive clause types SV_pass, SV_passC, SV_passA, and SV_passO:

Defeated, he slunk from the room
Type (S)V_pass (=active Type SVO)

11.4 Structural 'deficiencies' of non-finite clauses

The absence of the finite verb from non-finite clauses means that they have no distinctions of person, number, or modal auxiliary. Together with the frequent absence of a subject, this suggests their value as a means of syntactic compression. Certain kinds of non-finite clause are particularly favoured in the careful style of written prose, where the writer has the leisure to make a virtue out of compactness. But the advantage of compactness must be balanced against the stumbling block of ambiguity; for the absence of a subject leaves doubt as to which nearby nominal element is notionally the subject:

We met you [when you?] we were leaving the room
When no referential link with a nominal can be discovered in the linguistic context, an indefinite subject 'somebody/something' may be inferred, or else the 'I' of the speaker:

To be an administrator is to have the worst job in the world
('For a person to be . . .')
The prospects are not very good, to be honest
(' . . . if I am to be honest')

Note
[a] In negative non-finite clauses, the negative particle is placed immediately before the verb:

It's his fault for not doing anything about it
The wisest policy is (for us) not to interfere
It should be observed that the not precedes the to of the infinitive.
[b] The inseparability of to from the infinitive is also asserted in the widely held opinion that it is bad style to 'split the infinitive'. Thus rather than:

He was wrong to suddenly leave the country
many people (especially in BrE) prefer:
He was wrong to leave the country suddenly

It must be acknowledged, however, that in some cases the 'split infinitive' is the only tolerable ordering, since avoiding the 'split infinitive' results in clumsiness or ambiguity. For example:

I have tried to . . . not yet stop worrying about it

11.6 Verbless clauses

With the verbless clause, we can usually infer ellipsis of the verb be; the subject, when omitted, can be treated as recoverable from the context:

Dozens of people were stranded, many of them children (many of them being children)
Whether right or wrong, he always comes off worst in an argument
(Whether he is right or wrong . . .)

Verbless clauses can also, on occasion, be treated as reductions of non-finite clauses:

Too nervous to reply, he stared at the floor
(Being too nervous to reply . . .)
Here the verbless clause itself contains a non-finite clause, to reply.
As with participle clauses (11.3), the subject is often introduced by with:

With the tree now tall, we get more shade

11.7 Subordinators

Since the verbless clause is basically an elliptical intensive verb clause (Type SVC or SVA: 7.7), the variations of its structure are somewhat limited. The following, however, are among possible combinations:

She marched briskly up the slope, the blanket across her shoulder
S [V intense] A
When ripe, these apples will be delicious when [S V intense] C2
His gaze travelled round, irresolute [S V intense] C2

Optional adverbials may also be added, either initially or finally:
She looked with disgust at the dog, quiet now in Dinah's grasp
[S V intense] C, Atma Aplace

11.6 Formal Indicators of Subordination

In general, subordination is marked by some indication contained in the subordinate rather than superordinate clause. Such a signal may be of a number of different kinds: it can be a subordinating conjunction; a wh-element; the item that; inversion; or (negatively) the absence of a finite verb form. Especially in wh-questions (where, when, etc), we can see a fusion of conjunction and pro-adjunct.

11.7 Subordinators

Subordinators (or more fully 'subordinating conjunctions') are perhaps the most important formal indicators of subordination. Like prepositions, which they resemble in having a relating or connecting function, subordinators forming the core of the class consist of a single word; and again as with prepositions, there are numerous compound items which act, to various degrees, like a single conjunction. In addition, there is a small class of correlative subordinators, ie combinations of two markers, one a conjunction occurring in the subordinate clause, and the other (normally an adverb) occurring in the superordinate clause.

SIMPLE SUBORDINATORS

After, (al)though, as, because, before, if, once, since, that, until, when, where, while, etc

COMPOUND SUBORDINATORS

ending with that:

in that, so that, such that, except that, etc; in order that (or to + infinitive clause)

ending with optional that:

now (that), provided (that), supposing (that), considering (that), seeing (that), etc
ending with as:
  as far as, as long as, as soon as, so long as, etc;
  so as (+ to + infinitive clause)

ending with than:
  sooner than (+ infinitive clause), rather than (+ non-finite or verbless clause)

other:
  as if, as though, in case

CORRELATIVE SUBORDINATORS
  if . . . then; (al)though . . . yet/nsoevertheless; as . . .
  more/lesser . . . than; as . . . as; so . . . as; so . . . (that);
  such . . . as; such . . . (that); no sooner . . . than
  whether . . . or
  the . . . the

Note
[a] Some subordinators (as, since, until, till, after, before, but) also function as prepositions: since the war, etc.
[b] For, with, and without, elsewhere prepositions, might be added to the list of subordinators when they introduce the subject of a non-finite or verbless clause:
  for him to interfere (11.3); with so many people there (11.3, 11.5)
[c] Some of the above-listed subordinators introduce non-finite and verbless clauses (eg: if a nuisance); others do not (*since a nuisance). Details are given under relevant sections (11.21, 11.22, 11.24, 11.25, 11.26, 11.29).

11.8 Borderline subordinators
Three borderline categories may be mentioned: (a) habitual combinations of a subordinator with a preceding or following intensifying adverb (just as, if only); (b) participle forms (supposing . . .), bearing a resemblance to participle clause disjuncts like judging from . . ., speaking frankly, etc; (c) expressions of time which, although adverbial in form, act like a single temporal conjunction (eg: directly immediately the moment (that) I had spoken).

11.9 Other indicators of subordination
Now we give a brief preliminary survey of other indicators of subordination, apart from subordinating conjunctions.

(a) Wh-ELEMENTS are initial markers of subordination in, for example, dependent interrogative clauses. The wh-words (such as who) function as or within one of the clause elements subject, object, complement, or adverbial.

11.11 Functional classification of dependent clauses
(b) Subject-operator inversion (14.13) is a marker of subordination in some conditional clauses, where the operator is had, were, or should. Other unusual syntactic orderings also play a role in distinguishing a subordinate clause: for example, Sad though I was (11.26 Note).

There are only two types of subordinate clause that contain no marker within themselves of subordinate status: these are

[I] Nominal clauses which may or may not have that (11.13):
  I suppose you’re right (cf I suppose that you’re right)

[II] Comment clauses (11.45) of a kind relatable to the main clause in the previous example:
  You’re right, I suppose

11.10 Functional classification of dependent clauses
Dependent clauses may function as subject, object, complement, or adverbial in the superordinate clause:

subject: That we need more equipment is obvious.
direct object: I know that she is pretty
subject complement: The point is that we’re leaning indirect object: I gave whoever it was a cup of tea
object complement: I imagined him overcome with grief
adjunct: When we meet, I shall explain everything
disjunct: To be honest, I’ve never liked him
conjunct: What is more, he has lost the friends he had

In addition, they may function within these elements, as postmodifier, prepositional complement, etc; eg
postmodifier in noun phrase (13.5 ff): A friend who remains loyal
prepositional complement (6.2): It depends on what we decide
adjectival complement (12.11 ff): Ready to act promptly

Note
Dependent clauses rarely act as conjuncts, as object complements, or as indirect objects. As object complement, they must be non-finite clauses in complex-transitive complementation (12.20 ff). As indirect object, they must be nominal relative clauses (11.11).

11.11 Just as noun phrases may occur as subject, object, complement, appositive, and prepositional complement, so every nominal clause may occur in some or all of these roles. But the occurrence of nominal clauses is limited by the fact that they are normally abstract; ie
they refer to events, facts, states, ideas, etc. The one exception to this generalization is the nominal relative clause (11.16), which may refer to objects, people, substances, etc., and may in fact be analyzed, on one level, as a noun phrase consisting of head and postmodifying relative clause, the head and relative pronoun conjoining to form a single wh-element (4.88).

11.12

Adverbial clauses (11.20–36) operate as adjuncts or disjuncts. In this respect, they are like adverbs and are often commutable with prepositional phrases. Compare:

Because the soloist was ill, they cancelled the concert.

Because of the soloist’s illness, they cancelled the concert.

Comparative clauses (11.37–44), like sentential relatives, are difficult to fit into any of the major functional categories. They often have the appearance of adverbial or adjectival modifiers:

I love you more deeply than I can say.

He’s not as clever a man as I thought.

They also have some features in common with adverbial clauses, however. Semantically, we may consider them, together with their correlative element (more, as, -or, etc) in the main clause, as equivalent to a degree adverb.

Comment clauses (11.45 ff) perform the function of disjunct or (occasionally) conjunct, and often express the speaker’s attitude to the main clause, or his manner of asserting it:

Food is cheap in England, I believe.

Each of these functional types will now be examined in greater detail, leaving others to later chapters: relative clauses (13.5 ff), clauses in structures of complementation (12.12 ff).

Nominal clauses

11.13

That-clauses

The that-clause can occur as:

subject: That she is still alive is a consolation.

direct object: I told him that he was wrong.

subject complement: The assumption is that things will improve.

11.14 Wh-interrogative clauses

The dependent wh-interrogative clause occurs in the whole range of functions available to the that-clause, and in addition can act as prepositional complement:

subject: How the book will sell depends on its author.

direct object: I can’t imagine what made him do it.

appositive: Your assumption, that things will improve, is unfounded (13.13, 9.45).

adjectival complement: I’m sure that things will improve.

It cannot, however, occur as prepositional complement (6.2) or as object complement.

When the that-clause is object or complement (or delayed subject: 14.25), the conjunction that is frequently omitted in informal use, leaving a ‘zero’ that-clause:

[1] I knew
[2] I told him

he was wrong

I’m sure

When the clause is subject and not extraposed, that cannot be omitted and it usually expanded to the fact that, except in very formal English:

(The fact) that she is still alive consoles me.

Note

[a] The zero that-clause is particularly common when the clause is brief and uncomplicated. In contrast, the need for clarity discourages even the omission of that in complex sentences headed with adverbials and modification. Any parenthetical material between the verb of the superordinate clause and the subject of the that-clause is especially likely to inhibit deletion:

We had hoped, in a moment of optimism, that the Government would look favourably on our case.

The position of that after the second comma, rather than before the first comma, in this sentence, is decisive in assigning the parenthetical adverbial to the main clause and not the that-clause. The omission of that would leave the structure of the sentence unclear.

[b] Direct passive transforms of clauses with a that-clause object are rare, the version with extraposition (14.25) being preferred: It is thought that he will come. The same point applies to other nominal clauses.

[c] While that-clauses, like most other nominal clauses, cannot be object complements, an alternative (and rather formal) to-infinite construction is available with some verbs. Contrast [1] and [2]:

I thought his argument absurd.

I thought his argument to be absurd.

+I thought his argument that we should pay +to be that we should pay
subject complement: The problem is not who will go, but who will stay
appositive: My original question, why he did it at all, has not been
answered
adjectival complement: I wasn’t certain whose house I was in
prepositional complement: No one was consulted on who should
have the prize

As regards meaning, these clauses resemble wh-questions (7.52 f) in that
they leave a gap of unknown information, represented by the wh-element.
Compare the negative and interrogative with the positive declarative in
the following:

I’m not sure who is coming
Do you know who is coming?
I’m sure I know

There is also a grammatical similarity to wh-questions in that the wh-
element is placed first; indeed, apart from the absence of subject-operator
inversion in the dependent clause, the structures of the two types of
clause are in all respects parallel. We have, in the wh-interrogative clause,
the same choice between initial and final preposition where the preposi-
tional complement is the wh-element:

He couldn’t remember on which shelf he kept it (formal)
which shelf he kept it on

An infinitive wh-clause can be formed with all wh-words except why:

He was explaining how to start the motor (... how one should ...)
I never know where to put my coat (... where I ought to ...).

Note
[a] In literary style, there is an occasional subject-operator inversion when the
wh-element is the A of an SVC type clause, or the C of an SVC type clause:
I told them how strong was my desire to visit the famous temple
There is also an informal but chiefly dialectal inversion (eg in Irish English), as in:
He asked me where was I staying
[b] The preposition preceding a wh-clause is optional in certain circumstances:
I was not certain (of) what to do

11.15 Yes-no interrogative clauses
The dependent yes-no interrogative clause (cf 7.45 ff) is formed with if or
whether:

Do you know if/whether the banks are open?

11.16 Nominal relative clauses

The dependent alternative question (cf 7.54 f) has if/whether ... or:

I don’t know whether it will rain or be sunny
I don’t care if your car breaks down or not

Only whether can be directly followed by or not:

I don’t care whether or not your car breaks down

A clause beginning with whether cannot be made negative, except as the
second part of an alternative question:

if it doesn’t rain
whether it rains or (whether it does) not

On the other hand, if cannot introduce a subject clause:

Whether it rains or not doesn’t concern me
If it

Note
With certain introductory verbs or adjectives a negative whether-clause is excep-
table.
With wonder I’m not sure whether he doesn’t expect too much from her.

In fact, however, such sentences have a positive rather than negative meaning: ‘I think
he expects too much from her.’

11.16 Nominal relative clauses

The nominal relative clause, also introduced by a wh-element, can be:

subject: What he is looking for is a wife
direct object: I want to see whoever deals with complaints
indirect object: He gave whoever came to the door a winning smile
subject complement: Home is where your friends and family are
object complement: You can call me whatever (names) you like
appositive: Let us know your college address (that is, where you live
in term time)
prepositional complement: Vote for whichever candidate you like

The nominal relative clause is much closer to noun phrase status than
other nominal clauses are. It can normally be paraphrased by a noun
phrase containing a postmodifying relative clause:

I’ll give you however much tobacco you need (... any amount ... that you need)
Quality is what counts most (... the thing that counts most)
There is a difference between universal and definite meaning as expressed by the wh-form of a relative clause. We see this in the paraprases of the examples above: the first is paraphrased in ‘universal’ terms (any amount), the second in ‘definite’ terms (the thing). Contrast with the latter:

Quality is whatever counts most ('... anything that...')

The form who is rarely used in present-day English in this nominal relative function (*Who told you that was lying), being replaced in many contexts, for both universal and definite meanings, by whoever:

Whoever told you that was lying ('The person who...')
('Anyone who...')

Where the wh-word chosen is available for both nominal relative and interrogative clauses, an ambiguity arises:

They asked me what I didn't know ('They asked me that which I didn't know' or 'They asked me "What don't you know?"')

11.17  
To-infinitive nominal clauses

The to-infinitive nominal clause can occur as:

subject: For a bridge to collapse like that is unbelievable

direct object: He likes everyone to be happy

subject complement: My wish is to be a pilot

appositive: His ambition, to be a straight actor, was never fulfilled

adjectival complement: I'm glad to help you (see 12.13)

The subject of a to-infinitive clause is normally preceded by for (which is often acting here more as a conjunction than as a preposition). The subject, when a pronoun, is in the objective case:

The idea is [that we should meet on Thursday
[for us to meet on Thursday

When the clause is a direct object, however, the for is omitted:

He wants me to leave (rather than: *He wants for me to leave)

On wh-infinitive clauses, see 11.14.

Note

[a] The infinitive clause resembles the that clause (in contrast to the -ing clause) in never being a prepositional complement.

[b] The correspondence between 'The idea is to meet' and 'The idea is that we should meet' shows the putative nature of the infinitive clause (of 11.51).

11.18  
Nominal -ing clauses

The nominal -ing clause, a PARTICIPLE CLAUSE, occurs in the following positions:

subject: Telling lies is wrong

direct object: No one enjoys deceiving his own family

subject complement: His favourite pastime is playing practical jokes

appositive: His hobby, collecting stamps, absorbed him

prepositional complement: I'm tired of being treated like a child

The children were busy building sandcastles

It is the commonest type of participle clause, that which has no subject, that is illustrated above. When a subject is required, there is sometimes a choice as follows (but of 12.24):

GENITIVE case in formal style:

I'm surprised at his/John's making that mistake

OBJECTIVE or common case (for personal pronouns or nouns, respectively) in informal style:

I'm surprised at him/John making that mistake

It is commonly claimed that the genitive is the only 'correct' form, but in fact it frequently has a stilted effect, and is particularly unsuitable when the subject is an inanimate or abstract noun phrase which would not normally take the genitive case, or a 'group' genitive phrase (13.74):

? The crisis has arisen as a result of recent uncontrolled inflation's having outweighed the benefits of devaluation

On the other hand, a pronoun in the objective case is disliked in subject position:

His being a Jesuit was a great surprise (very informal)

Many prefer to avoid both possibilities where alternatives are available:

It was a great surprise that he was a Jesuit

Note

As compared with the -ing clause, the genitive is obligatory where the -ing item constitutes the head of a noun phrase:

His/him criticizing John was very unfair

His/him criticizing of John was very unfair

See 13.20, 23 Note.
11.19  Bare infinitive and verbless clauses
The to of the infinitive is optionally omitted in a clause which supplies a predicative corresponding to a use of the pro-verb do:

All I did was (to) turn off the gas

When the infinitive clause is initial, to has to be omitted: Turn off the tap was all I did.

Note
In the following sentence, the lack of concord between carpets and is shows that the subject is not a noun phrase:

Wall-to-wall carpets in every room is very expensive

Rather, it should be seen as a nominal verbless clause, paraphrasable as 'Having wall-to-wall carpets in every room'. On the other hand, the similarity often causes these verbless clauses to be given the concord demanded with noun phrases:

Are fast cars in cities really very wise?

Adverbial clauses
11.20  Adverbial clauses, like adverbials in general (8.3), are capable of occurring in a final, initial, or medial position within the main clause (generally in that order of frequency; modal position being rather rare). Attention will be drawn, in the paragraphs that follow, to modifications of this general statement. On problems of tense, aspect, and mood, see 11.47 ff.

11.21  Clauses of time
Finite adverbial clauses of time are introduced by such subordinators as after, before, since, until, when:

When I last saw you, you lived in Washington
Buy your tickets as soon as you reach the station
Our hostess, once everyone had arrived, was full of good humour

The -ing clause may be introduced by after, before, since, until, whenever, and while; -ed clauses by once, until, whenever, and while; and verbless clauses by as soon as, once, whenever, and while:

He wrote his greatest novel while working on a freighter
Once published, the book caused a remarkable stir
When in difficulty, consult the manual

In addition, -ing clauses without a subject are also used to express time relationship:

Nearing the entrance, I shook hands with my acquaintances ('when/as I neared . . .')

11.23  Clauses of condition and concession
The stranger, having discarded his jacket, moved threateningly towards me ('after he had discarded . . .')

Temporal clauses are common in initial position.

Note
[a] With until and its variant till, the superordinate clause is negative if the time reference is to a commencement point (cf. 6.33 f):

*He started to read until he was ten years old
He didn't start to read until he was ten years old
He walked in the park till it was dark

In the negative sentence, not ( . . . ) until means the same as not ( . . . ) before.

[b] There is no semantic subordination with a type of when-clause which occurs finally in sentences in formal narrative style and in which when means rather and then:

The last man was emerging from the escape tunnel when a distant shout signalled its discovery by the guards

[c] Infinitive clauses of 'outcome' may be placed among temporal clauses:

I awoke one morning to find the house in an uproar

Such sentences could be paraphrased by switching the relationship of subordination, and using a when-clause:

When I awoke one morning, I found the house in an uproar

Their restriction to final position suggests an analogy between these infinitive clauses and result clauses (11.32), which they resemble in meaning.

11.22  Clauses of place
Adverbial clauses of place are introduced by where or wherever:

They went wherever they could find work
Where the fire had been, we saw nothing but blackened ruins

Non-finite and verbless clauses occur with both the subordinators:

Where(ever) known, such facts have been reported
Where(ever) possible, all moving parts should be tested

Note
In this last example, as in the When in difficulty example of 11.21, we see a general contingency; relation similar to conditions: wherever possible, whenever possible, if possible. This generality of meaning is characteristic of verbless and non-finite clauses (cf. 11.36) but is common also in finite clauses (Whenever anyone finds this possible), and in part reflects fundamental similarities between several adverbial relationships.

11.23  Clauses of condition and concession
Whereas conditional clauses state the dependence of one circumstance or set of circumstances on another:

If you treat her kindly, (then) she'll do anything for you
The complex sentence 11.24

Concessive clauses imply a contrast between two circumstances; i.e. the main clause is surprising in the light of the dependent one:

Although he hadn’t eaten for days, he (nevertheless) looked very fit.

The parenthesized items illustrate the possibility of correlation (11.7) in both types of clause.

From this, we see that although as a subordinator is the approximate equivalent of but as a coordinator (9.18):

He hadn’t eaten for days, but he looked strong and healthy.

The overlap between conditional and concessive clauses comes with such subordinators as even if, which expresses both the contingent dependence of one circumstance upon another and the surprising nature of this dependence (11.26):

Even if he went down on bended knees, I wouldn’t forgive him.

Both conditional and concessive clauses tend to assume initial position in the superordinate clause.

11.24 Clauses of condition

Finite adverbial clauses of condition are introduced chiefly by the subordinators if (positive condition) and unless (negative condition):

He must be lying if he told you that

Unless the strike has been called off, there will be no trains tomorrow.

The latter means roughly ‘If the strike has not been called off...’. But there is a slight difference between an unless-clause and a negative if-clause in that unless has the more exclusive meaning of ‘only if... not’ or ‘except on condition that...’. It is thus the opposite of the compound conjunction provided (that) or providing (that), which means ‘if and only if...’:

Provided that no objection is raised, we shall hold the meeting here.

Other compound conditional conjunctions approximately synonymous with provided (that) are as long as, so long as, and on condition that.

If and unless often introduce non-finite and verbless clauses: if ready; unless expressly forbidden, etc. Also to be noted are the residual positive and negative conditional pro-clauses if so and if not (10.36).

11.25 Real and unreal conditions

A ‘real’ condition leaves unresolved the question of the fulfilment or non-fulfilment of the condition, and hence also the truth of the proposition expressed by the main clause. In an ‘unreal’ condition, on the other hand, it is clearly expected that the condition will not be fulfilled. Thus:

Real: If he comes, I’ll see him. If she was awake, she certainly heard the noise.

Unreal: If he came, I’d see him. If she’d been awake, she would have heard the noise.

On the association of past with ‘unreal’, see 3.47, 11.48. On conditional clauses as disjuncts, see 8.49.

If-clauses are like questions in implying uncertainty. They tend therefore to contain non-assertive forms such as any, ever (see 7.35):

If you ever have any trouble, let me know.

Clauses beginning with unless, on the other hand, lay stress on the excluded positive option, and so normally contain assertive forms:

I won’t phone you, unless something unforeseen happens (= I’ll phone you when something unforeseen happens – but we can exclude this as unlikely).

For the same reason, unless-clauses are not usually unreal conditions. Hence the negative unreal conditional clause if I had not arrived has no equivalent unless-clause, *Unless I had arrived.

Note

[a] The combination if only is an intensified equivalent of if, typically used in preposed unreal conditions (with no non-assertive requirement) to express a wish:

If only somebody had told us, we could have warned you.

[b] The subjunctive or should (3.50) is sometimes used in formal real conditions:

If he be found guilty, his wife will suffer terribly.

[c] The infinitival clause can be used conditionally:

You have to be strong to lift a table like that (‘if you’re going to lift’).

He’d be stupid not to accept that offer (‘if he didn’t accept’).

Such clauses contain an element of permissive meaning (11.51).

[d] Conditional clauses (especially unreal) may have subject-operator inversion without a conjunction:

Had I known, I would not have gone.

11.26 Clauses of concession

Clauses of concession are introduced chiefly by though (also a conjunct; 8.53) or its more formal variant although. Other conjunctions include while, whereas (chiefly formal), even if, and occasionally if.
No goals were scored, though it was an exciting game.
Although I enjoyed myself, I was glad to come home.
Whereas John seems rather stupid, his brother is clever.
Even if you dislike music, you would enjoy this concert.
If he's poor, at least he's honest.

Non-finite and verbless clauses of concession are often introduced by conjunctions, but not by whereas. For example, though a young man, although often despairing of rescue, even if still operating, even though given every attention.

Note: Concession is sometimes rather formally expressed with the subordinators as though, and that occurring after the subject complement; less frequently other predications may be preposed:

Naked as I was, I braved the storm.
Since awkwardly though you may, John is very popular.

11.27

Alternative conditional-concessive clauses
The correlative sequence whether ( . . . ) or . . . is a means of coordinating two subordinate clauses, combining conditional meaning with disjunction meaning:

Whether they beat us or we beat them, we'll celebrate tonight.
Whether (living) in London or not, John enjoyed himself.
Whether or not he finds a job in New York, he's moving there.

The concessive element of meaning comes in secondarily, through the implication that if the same thing takes place in two contrasting conditions, there must be something surprising about at least one of them.

11.28

Universal conditional-concessive clauses
The universal conditional-concessive clause, introduced by one of the wh-compounds (whatever, whoever, etc), indicates a free choice from among any number of conditions:

She looks pretty whatever she wears.

That is, even though she were to wear overalls or a space suit. There is a subtle semantic difference between such conditional clauses and apparently identical time and place clauses:

Wherever you live, you can keep a horse.

The locative meaning would be 'You can keep a horse at any place where you may live'; the conditional-concessive meaning is 'it doesn't matter where you live, you can keep a horse - not necessarily in that same place'.

11.30

Clauses of circumstance
The longer constructions it doesn't matter whether and the more informal no matter whether may be added to the list of universal conditional-concessive clause introducers:

\[
\begin{align*}
\text{No matter} \\
\text{It doesn't matter}
\end{align*}
\]

how hard I try, I can never catch up with him.

Note: With an abstract noun phrase subject of an SVP-clause, the verb be can be omitted from a universal conditional-concessive clause:

Whatever your problems are, they can't be worse than mine.
However great the pitfalls are, we must do our best to succeed.

11.29

Clauses of reason or cause
Clauses of reason or cause are most commonly introduced by the conjunctions because, as, or since:

I lent him the money because he needed it.
As since Jane was the eldest, she looked after the others.

These different positional tendencies (characteristic of the respective conjunctions) reflect a different syntactic status: because-clauses are adjuncts, whereas as- and since-clauses are disjuncts. Informally, however, a final because-clause sometimes functions as a disjunct of reason:

They've lit a fire, because I can see the smoke rising.

Non-finite and verbless clauses can be used for cause (11.36), but without conjunction:

Being a man of ingenuity, he soon repaired the machine.

11.30

Clauses of circumstance
Clauses of circumstance express a fulfilled condition or (to put it differently) a relation between a premise (in the subordinate clause) and the conclusion drawn from it (in the main clause). Because, since, and as can convey this meaning, but in addition there is a special circumstantial compound conjunction, seeing (that):

Seeing that the weather has improved, we shall enjoy our game.

Non-finite clauses and verbless clauses are often used (11.36), but without subordinator:

The weather having improved, we enjoyed the rest of the game.
11.31
Clauses of purpose
Clauses of purpose are adjuncts, usually infinitival, introduced by (in order) (for N) to, so as to:

I left early to catch the train
They left the door open in order for me to hear the baby

Finite clauses of purpose may be introduced by so that, so (informal), or in order that (formal):

John visited London so that he could see his MP

In the purpose clause, which has 'putative' meaning (11.51), the modal auxiliaries should and may (past tense might) are used.

Note
Negative purpose is expressed by for fear (that), (in BrE) in case, or the now rather archaic and very formal conjunction lest:

They left early for fear they would meet him (= in order that...not...)

11.32
Clauses of result
Result clauses (disjuncts, placed finally in superordinate clauses) are factual rather than 'putative'; hence they may contain an ordinary verb form without a modal auxiliary. They are introduced by so that, informally so:

We planted many shrubs, so (that) the garden soon looked beautiful

11.33
Clauses of manner and comparison
Clauses of manner are introduced by (exactly) as, (just) as:

Please do it (exactly) as I instructed ('in the way that...')

If an as-clause is placed initially, the correlative form so, in formal literary English, may introduce the main clause:

(Just) as a moth is attracted by a light, so he was fascinated by her

Such examples provide a transition to the adverbial clauses of comparison, introduced by as if, as though:

He looks as if he is going to be ill
If there is doubt or 'unreality', the modal past is used:

He treated me (just) as if he had never met me

Note
Clauses of comparison sometimes show subject-operator inversion:

The present owner collects paintings, as did several of his ancestors

11.34
Clauses of proportion and preference
Proportional clauses express a 'proportionality' or equivalence of tendency or degree between two circumstances, and are either introduced by as (with or without a formal correlative so) or by fronted correlative the...the plus comparatives:

As he grew disheartened, so his work deteriorated
The more he thought about it, the less he liked it
The harder he worked, the happier he felt

Clauses of preference are introduced by rather than, sooner than, with a bare infinitive structure; but rather than is less restricted:

Rather than go there by air, I'd take the slowest train
Sooner than

Rather than sitting quietly at home, he preferred to visit his friends

11.35
Non-finite and verbless clauses
11.35
IMPLIED SUBJECT
If the subject is not actually expressed in a non-finite or verbless clause, it is assumed to be identical with the subject of the superordinate clause:

When ripe, the oranges are picked and sorted
He took up anthropology, stimulated by our enthusiasm
She hesitated, being very suspicious, to open the door
He opened his case to look for a book

Commonly, however, this 'attachment rule' is violated:

? Since leaving her, life has seemed empty

In this case, we would assume that the superordinate clause means 'Life has seemed empty to me' and that the subject of the -ing clause is also first person. Such 'untagged' ('penned' or 'dangling') clauses are frowned on, however, and are totally unacceptable if the superordinate clause provides no means at all for identifying the subordinate subject. In the following sentence, for example, it cannot be a dog:

*Reading the evening paper, a dog started barking

Note
[a] The attachment rule does not need to be observed with disjuncts:

Speaking candidly (S = 'I'), John is dishonest

[b] Tense, aspect and mood are also inferred in non-finite and verbless clauses from the sentential context. Cf 13.5, 13.14 ff.
11.36

**Semantic Diversity**

We have seen that many of the relationships (time, reason, etc.) discussed earlier can be expressed by means of non-finite and verbless clauses. Where these are introduced by conjunctions, the relationship may be quite explicit: *if necessary, since being here, etc.* Where they are not so introduced, there may be considerable indeterminacy as to the relationship to be inferred:

- John, *soon to become a father, feeling considerable anxiety, told of his good fortune, sad at the news*, went to Mexico

In this position, the clauses could have the function merely of non-restrictive postmodifier of *John* (cf 13.17). But their potential relationship to the whole superordinate clause rather than only to the subject is indicated by their mobility. For example:

*Soon to become a father, John went to Mexico*

*John went to Mexico, feeling considerable anxiety*

Clearly, their formal inexplicitness allows considerable flexibility in what we may wish them to convey. Thus according to the context, we might want to imply a temporal relation (eg: *When he was told of his good fortune*), a causal relation (eg: *Because he was soon to become a father*), a concessive relation (eg: *Although he was sad at the news*). In short a contingency is implied, but for the hearer or reader the actual nature of the contingency has to be inferred from the context.

**Comparative sentences**

11.37

In a comparative construction, a proposition expressed in the superordinate clause is compared with a proposition expressed in the subordinate clause by means of a *comparative element*. This comp-element specifies the standard of comparison (eg: *health*) and identifies the comparison as equalitarian or differentiating. The comp-element is linked with the subordinate clause by a correlative sequence: *as ... as, or* differentiating *less ... than, more ... than* (where the first item may be replaced where relevant by the infeclional comparative). See 5.32. Eg:

- *Jane is as healthy as her sister (is)*
- *as healthy as less healthy more healthy then healthier than her sister (is)*

11.39 Ellipsis in comparative sentences

The standard of comparison involves only a scale, without commitment to absolute values; thus, in the above examples, neither Jane nor her sister need be ‘healthy’.

11.38

Like the Q-element of a question, a comp-element can be any of the main elements of clause structure (apart from the verb):

- comp-element = S: *More people use this brand than (use)* any other window-cleaning fluid
- comp-element = C: *I’m happier about it than my husband (is)*
- comp-element = Q: *He knows more than most people (know)*
- comp-element = O: *That man has given more children happiness than anyone else (has)*
- comp-element = A: *You’ve been working much harder than I (have)*

**Note**

[6] Constructions with *more ... than and less ... than* do not necessarily introduce comparative clauses. There is a type of non-clausal comparison in which *than* is followed by an explicit standard or yardstick of comparison, normally a noun phrase of measure, or a noun phrase implying degree:

- *The books weigh more than four pounds*:
- *I go faster than 1.4 miles per hour*:
- *The strike was nothing less than a national catastrophe*:

Here *than* is best considered a preposition, and the phrase which follows it a prepositional complement.

[6] There is a second type of *more ... than* construction not introducing a comparative clause. This is the quasi-coordinative type of construction illustrated by:

- *I was more angry than I was frightened (of I was angry rather than frightened)*

A distinguishing characteristic of this construction is the non-occurrence of the suffixed form of comparison:

- *I was angrier than frightened*

11.39 Ellipsis in comparative sentences

Ellipsis of a part of the subordinate clause, is likely to occur whenever that part is a repetition of something in the main clause. Since it is normal for the two clauses to be closely parallel both in structure and content, ellipsis is the rule rather than the exception in comparative constructions. It is worth while pointing out, however, that there is no necessary parallelism between the main and comparative clauses, and that the comparative clause, so long as it overlaps with the content of the main clause in respect of the comp-element, can be of independent structure. Thus we may take two *wh*-questions of disparate clause types:
11.42 Noun phrase and comp-element

The complex sentence 11.40

How quickly does he speak?
How quickly can his secretary take dictation?

and use them to construct the comparative sentence:

He speaks more quickly than his secretary can take dictation

Optional ellipses and substitutions (by pronoun and by pro-predication) are illustrated in the following:

(a) James enjoys the theatre more than Susan enjoys the theatre
(b) James enjoys the theatre more than Susan enjoys it
(c) James enjoys the theatre more than Susan does
(d) James enjoys the theatre more than Susan

It should be noted that ellipsis of the object cannot take place unless the verb too is ellipted (9.2); thus we could not expand (d) as:

*James enjoys the theatre more than Susan enjoys it

But, if the object is the comp-element itself, the verb may remain:

James knows more about the theatre than Susan (knows)

Obligatory ellipsis, on the other hand, applies to the standard of comparison which cannot be specified again in the subordinate clause (*Jane is healthier than her sister is healthy), though different aspects of a single standard may be specified in each clause. This occurs with 'size' and 'ability' in the following examples:

The bookcase is wider than it is tall
Jane is as successful at sport as her sister is successful academically

11.40 Ambiguity through ellipsis

When normal ellipses have taken place, ambiguity can arise as to whether a remaining noun phrase is subject or object (9.23):

He loves the dog more than his wife

could mean either [1] '... than his wife loves the dog' or [2] '... than he loves his wife'. If *his wife* were replaced by a pronoun, formal or fastidious English could disambiguate this example:

He loves the dog more than she
He loves the dog more than her

[1] [2]

Informally, however, the ambiguity would remain, since than plus the objective case tends to be used for both [1] and [2]. See 4.83 and cf 10.36, 11.38 Note a on the quasi-prepositional value of than. Since objections can be raised against both (stiffness or over-familiarity), we sometimes steer a middle course using additional pro-forms (than she does, than he does her).

11.41 Ellipsis and partial contrast

If the two clauses in a comparison differed solely in the comp-element (*I hear it more clearly than I hear it), only nonsense would result, of course. But the elements in the two clauses may be lexically identical and differ only in tense or mood. In such cases it is normal to have ellipsis of all identical items except any that are necessary to express the contrast:

I hear it more clearly than I did (ie hear it)
I get up as early as I should (ie get up)

If the contrast lies in tense only, it may be expressed in the subordinate clause solely by an adverbial:

She'll enjoy it more than (she enjoyed it) last year

This provides the basis for the total ellipsis of the subordinate clause in examples like

You are slimmer (ie than you were)

Note

[a] In negative superordinate clauses, as can be replaced by so especially when there is total or considerable deletion in the subordinate clause:

He's not as naughty as he was
He's not so naughty (now)

[b] There is a second type of circumstance in which the comparative clause is omitted:

this is when there is anaphoric reference to an implied or actual preceding clause or sentence (cf 10.43), as in:

I caught the last bus from town; but Harry came home even later (ie 'later than that', 'later than I came home')

11.42 Noun phrase and comp-element

If we were to say:

There are more intelligent monkeys than Herbert

we would normally mean that Herbert is an intelligent monkey; that is, by placing the comparative adjective in front of the noun phrase, we put the whole noun phrase in an intensive relation with the noun phrase in the comparative clause. On the other hand, if more and the adjective are placed after the noun, we readily admit the plausible interpretation that Herbert is a man:

There are monkeys more intelligent than Herbert
The complex sentence 11.43

Note
More may be the comparative quantifier:
John has more new clothes than I have
that is, a greater quantity of new clothes, not newer clothes. The modifying sequences less/more of a . . . as much of a . . . occur with gradable noun heads (4.3 Note);
He's more of a fool than I thought (he was)
Cf the How-question, How much of a fool is he?

11.43 Enough and too
There are comparative constructions with enough and too, which convey the contrasting notions of 'sufficiency' and 'excess', and which are related through negation. Paraphrase pairs may be constructed, using antonymous adjectives or adverbs, as follows:
- The grass is too short (to cut)
- The grass isn't long enough (to cut)
- He's not too poor (to own a car)
- He's rich enough (to own a car)

The infinitive clause which follows the comp-element may be omitted if the context allows.

The negative force of too is shown: in the use of non-assertive forms like any or anything; compare:
- She's old enough to do some work
- She's too old to do any work

Like other infinitive clauses, the subordinate clause in these constructions may have an expressed subject:
- The blade moves too quickly for most people to see (it)

As in this example, the expressed subject permits also the optional expression of an object pronoun (here representing the blade). When the subject is not expressed, it may be identified with the superordinate subject or with an indefinite subject:
- I've lived long enough to understand these things
- The writing is too faint to read

With neither subject nor object expressed, ambiguity is possible (cf.12.13):
- The lamb is too hot [(for us) to eat [(it) (anything)]

Note
With gradable nouns, we have enough/too much of a . . . (cf.11.42 Note); cf also 'He was fool enough to go without a coat'.

11.44 So . . . (that) and such . . . (that)
The correlatives so . . . (that) and such . . . (that) are linked to too and enough, by paraphrase relations. For example:
- It flies fast enough to beat the speed record
- It flies so fast that it can beat the speed record
- It's too good a chance to miss
- It's such a good chance that we mustn't miss it

It will be observed that in these paraphrases, the verb in the that-clause contains a modal auxiliary; when the modal auxiliary is absent, the so/such . . . (that) construction has the more definite meaning of result or outcome:
- He was so wild that we let him escape
- I so enjoyed it (or I enjoyed it so much) that I'm determined to go again

The alternation between so and such depends on grammatical function. The that which introduces the comparative clause is sometimes omitted in informal English:
- He polished the floor so hard you could see your face in it

The somewhat formal construction so/such . . . as to plus infinitive clause is sometimes used in place of so or such followed by a that-clause:
- His satires were so brilliant as to make even his victims laugh
- The brilliance of his satires was such as to make even his victims laugh

Note
An emphatic fronting of the comp-element, accompanied by inversion of subject and operator, is sometimes found in formal (especially literary) English:
- To such lengths did she go in rehearsal that two actors walked out
- So strange was his appearance that no one recognized him

Comment clauses

11.45 Comment clauses are somewhat loosely related to a superordinate clause, and may be classed as disjuncts or conjuncts. In general, they may occur initially, finally, or medially, and have a separate tone unit (App II.7):
- The smith, | as you probably know, | are going to America |

As the following list of types shows, comment clauses vary in form:

(1) Like a main clause:
- At that time, I believe, labour was cheap
(2) Like an adverbial clause (introduced by as):
   I'm a pacifist, as you know

(3) Like a nominal relative clause as conjunct (8.53):
   What's more, we lost all our belongings

(4) To-infinitive clause as style disjunct (8.48 f):
   I'm not sure what to do, to be honest

(5) -ing clause as style disjunct (8.48 f):
   I doubt, speaking as a layman, whether television is the right medium

(6) -ed clause as style disjunct (8.48 f):
   Stated bluntly, he has no chance of winning

11.46
In the first type of clause, which is perhaps the most important, the verb or adjective requires an indirect statement as complementation (11.13, 11.55, 12.17). We may therefore set up a one-to-one relationship between sentences containing such clauses, and indirect statements:

   -At that time, I believe, labour was cheap
   -I believe that, at that time, labour was cheap

To convert an indirect statement into a sentence with comment clause, one has to reverse the relation of subordination between the two clauses, making the that-clause into the main clause and the main clause into the comment clause. Because of this reversal of syntactic roles, the two examples above are not exact paraphrases; but the relationship between them illuminates the function of the comment clause.

Since the that of a that-clause is normally deletable (11.13), cases arise in which only the intonation (reflected by comma separation in writing) distinguishes which is the superordinate and which the subordinate clause:

   -You KNOW, I | think you're wrong I (You know is a comment
   -You know, I | think you're wrong I (You know is an object

Quin a number of Type 1 comment clauses introduced by 1st or 2nd person subjects are the stereotyped I see, you know, etc., inserted to give informality or warmth. Outside this group, however, clauses can be fairly freely constructed, and variations of tense and aspect, additions of adjuncts, etc., are permitted:

11.47 The verb phrase in dependent clauses

The Indian railways (my uncle was telling me some time ago) have always made a profit

The subordinator as may be added to Type 1 clauses converting them to Type 2, with virtually no change of meaning:

The Indian railways (as my uncle was telling me some time ago) have always made a profit

Note
[a] There are also comment clauses which may be related to a main clause introducing an indirect question:
   What's he doing, I wonder? (cf I wonder what he's doing)
   Sometimes a comment clause is itself in the form of a direct question:
   What's he doing, do you think?

[b] Clauses which introduce direct speech (11.52) may be considered comment clauses of Type 1:
   'It's time we went,' I said

The verb phrase in dependent clauses

11.47
The present tense with subordinators

To express future meaning, the present tense is used in preference to the auxiliary will/shall in certain types of adverbial clauses:

   -When
   -Before
   he will arrive, the band will play the National Anthem

   -If
   -When
   -Before
   he arrives, the band will play the National Anthem

The subordinators chiefly involved belong to the temporal and conditional (in part also, concessive) categories:

   TEMPORAL: after, as, before, once, till, until, when(ever), as soon as
   OTHER: if, unless, provided (that), given (that), assuming (that),
   presuming (that), even if, in case, as (manner), whatever, etc

Thus:

Even if tomorrow's match is cancelled, Newcastle will still be top of the league
He will come in case we need him
Next time I'll do as he says

Nominal that- and wh-clauses tend to contain present tense verbs when the main clause (as well as the subordinate clause) refers to the future; but
when the main clause refers to the present, the future will is likely to be used in the subordinate clause. Contrast:

I shall ask him what he wants tomorrow The question is what he will want tomorrow

However, there are exceptional verbs like hope, suppose (in the imperative), and assume, after which the simple present can often be used as readily as will:

I hope that the parcel comes in time
Let's assume our opponents win the election

Note
There are two exceptions to the rule that will/won't cannot appear in if-clauses (and in some of the other types of clause mentioned above):
(i) Where will/won't has a volitional or habitual meaning, rather than a pure future sense:
   If you won't (= 'refuse to') help us, all our plans will be ruined
(ii) Where even though the if-clause refers to the future, the condition expressed by the whole sentence obtains in the present:
   If he won't arrive before nine, there's no point in ordering dinner for him
   If it will make any difference, I'll gladly lend you some money

In both these sentences, the future contingency expressed in the if-clause determines a present decision.

11.48
The modal past
The past tense is used, as already explained (11.25), in unreal conditional sentences:

If we had enough money, I wouldn't have to work so hard
The corresponding superordinate verb phrase is would/should + infinitive, except when the past of another modal auxiliary is used:

If we had enough money, we could buy a tape-recorder

Other constructions in which the modal past is used are illustrated below (on the subjunctive were, see 3.46):

It's time you were in bed
He behaves as though he was/were a millionaire
It's not as though we were poor
Just suppose/imagine someone was/were following us
I'd rather we had dinner now
If only I had listened to my parents!

From each of these sentences a negative inference can be drawn: 'but you're not in bed', 'he isn't a millionaire', etc. Unreal meaning in past time is indicated by had plus the -ed participle:

We could have got married today, if you'd really wanted to
If he had listened to me, he wouldn't have made the mistake

With past reference, the unreal meaning is more absolute than in the present, and amounts to an implied rejection of the condition: 'but in fact you didn't want to'; 'but in fact he didn't listen'. With present and future reference, the meaning may be merely one of improbability and negative expectation:

If you listened to me, you wouldn't make mistakes
('... but I don't suppose you will listen to me')

11.49
Perfect aspect with since, etc
When since is used in a temporal sense, the perfect is used in the superordinate clause, also sometimes in the subordinate clause, in referring to a stretch of time up to (and potentially including) the present:

Since we have owned a car, we have gone camping every year
(or possibly: ... we go camping, where own implies duration)
The has been drinking Martinis ever since the party started
(Note: She is drinking ... , where start excludes duration)

The same applies to since as preposition and as prepositional adverb:

Scholars have been writing English grammars since the sixteenth century

After and when, in referring to a sequence of past events, can be followed either by a past perfect or by a simple past tense verb:

After he had returned, from work, his wife served dinner
When he returned, from work, his wife served dinner

All four of these are acceptable, and mean roughly the same. The only difference is that when with the simple past tense (probably the most popular choice) suggests that the one event followed immediately on the other. There may however be a contrast:

He went away when I had visited her
The variant with the past tense would normally mean 'as soon as I visited her' or 'at the time that I was visiting her', that with the past perfect 'after I had visited her'.
Note
If the verb phrase of the main clause is progressive in aspect, or contains a static verb, when indicates the simultaneity, rather than succession of the events:

When he returned from work, his wife was (working) in the kitchen.

11.50
Present subjunctive in conditional clauses, etc
The present subjunctive (3.46) is used very occasionally and in rather formal use, as we have seen, in real conditional clauses and concessive clauses:

Whatever be the reasons for it, we cannot tolerate this disloyalty
(cf Whatever may be the reasons . . .)

Clauses of concession and purpose may also very occasionally contain a verb in the subjunctive mood to express 'putative' meaning (see 11.51):

Though he be the President himself, he shall hear us

The subjunctive is also possible in that-clauses expressing wish, hope, or intention (though should would be more usual):

Congress has voted/decided/decreeed/insisted that the present law be maintained

The present subjunctive is more common in AmE than in BrE, where it is rare outside legal style.
The past subjunctive were is used in formal clauses of hypothetical meaning, such as those introduced by if, as if, as though, though, and the imperative verbs suppose and imagine:

Suppose he were here . . .
If the truth were known . . .

11.51
Putative should
The modal auxiliary should is used quite extensively in that-clauses to express not a subordinate statement of fact, but a 'putative' idea. It can usually be replaced by the indicative without much difference of meaning. Compare:

I am surprised that he should feel lonely (= he feels)
I am told that he feels lonely (≠ he should feel)

The first sentence alludes to a report over which doubt may be allowed to linger, while the second accepts the report as a fact.

11.52 Direct and indirect speech

Other superordinate constructions which introduce a that-clause with should can be illustrated as follows:

It's a pity
I'm surprised
It's disgraceful
It's unthinkable
That he should resign
It worries me

Most of these are constructions in which the that-clause is an extraposed subject (14.24f, 12.12, 12.17). Notice that in the first two cases, despite the should, the event is assumed to have taken place already. This is because the 'factual' bias of the main clause construction overrides the doubt otherwise implicit in the should construction. Nonetheless, there is still a difference of feeling between I'm surprised that he should resign and I'm surprised that he has resigned: in the first, it is the 'very idea' of resignation that surprises; in the second, it is the resignation itself, as an assumed fact.

Note
Putative should also occurs in some idiomatic questions and exclamations:

How should I know?
Why should he be resigning?
That he should dare to attack me!
Who should come in but the mayor himself!

11.52 Direct and indirect speech

The difference between direct speech and indirect (or reported) speech is shown in:

He said: 'I am very angry' (DIRECT SPEECH)
He said that he was very angry (INDIRECT SPEECH)

Indirect speech subordinates the words of the speaker in a that-clause within the reporting sentence. In the case of direct speech, his words are 'incorporated' (in writing by quotation marks) within the reporting sentence and retain the status of an independent clause. Nevertheless, the 'incorporated' speech has in part the function of an element in the clause structure of the reporting sentence;

He said this (O1), namely 'I am very angry'

Structurally, the reporting clause, in direct speech, may be classed as a comment clause (11.46). It may occur before, within, or after the speech itself. Except when it occurs in initial position, there is likely to be an inversion of the subject and a reporting verb in the simple present or past tense:
'I am your friend,' said John.
John said he said.

Inversion is unusual and archaic, however, when the subject of the reporting clause is a pronoun: ... said he. The medial placing of the reporting clause is very frequent:

'As a result,' said John, 'I am very angry.'

Note
'Direct and indirect speech' will be used here as traditionally, but 'speech' must be allowed to include unspoken mental activity when the reporting verb may be think, believe, feel, etc; but cf. 11.58. It should also be noted that indirect report frequently involves paraphrase or summary of the speech or thought it represents.

11.53
Back-shift and other changes
Several changes are made in converting direct to indirect speech (subject to the exceptions in 11.54), and their effect is one of distancing. 1st and 2nd person pronouns are changed to 3rd person:

'I'll behave myself,' he promised.
He promised that he'd behave himself.

'You are beautiful,' he whispered.
He whispered that she was beautiful.

Frequently, there is a change from this/these to that/those, from here to there, and from now to then:

'I live here,' he explained.
He explained that he lived there.

'I shall do it now,' he said.
He said that he would do it then.

The most important alteration takes place, however, in the verb phrase: this is the change of tense that is referred to as back-shift. When the reporting verb is in the past tense, verbs in the reported speech are changed as follows:

<table>
<thead>
<tr>
<th>DIRECT</th>
<th>INDIRECT</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) present</td>
<td>past</td>
</tr>
<tr>
<td>(2) past</td>
<td></td>
</tr>
<tr>
<td>(3) present perfect</td>
<td>past perfect</td>
</tr>
<tr>
<td>(4) past perfect</td>
<td></td>
</tr>
</tbody>
</table>

Thus, if we move into the past for the reporting clause, there is a corresponding shift into the past (or if necessary, further into the past) in the reported clause. Examples of each part of the rule are:

(1) 'I am tired,' she complained.
She complained that she was tired.

(2) 'The exhibition finished last week,' explained Ann.
Ann explained that the exhibition had finished the preceding week.

(3) 'I've won the match already!' exclaimed our friend.
Our friend exclaimed that he had won the match already.

(4) 'The whole house had been ruined,' said the landlord.
The landlord said that the whole house had been ruined.

If, on the other hand, the reporting verb is in the present, there is no tense change:

She keeps saying, 'I am a failure.'
She keeps saying that she is a failure.

11.54
Exceptions to the distancing rules
The change to the more 'distant' meaning (eg to 3rd person pronouns) does not always take place, in that the use of forms appropriate to the reporting situation must take precedence over those appropriate to the reported speech situation. For example:

'You are wrong, John,' said Mary.
John reporting, 'Mary said that I was wrong.'

Analogously, the rule of back-shift can be ignored in cases where the validity of the statement reported holds for the present time as much as for the time of utterance. Thus, while back-shift is obligatory in the first of the following examples, it is optional in the second:

'I am a citizen, not of Athens, but of the world,' said Socrates.
Socrates said that he was a citizen, not of Athens, but of the world.

'Nothing can harm a good man,' said Socrates.
Socrates said that nothing could harm a good man.

11.55
Indirect statements, questions, exclamations, and commands
Our examples have so far been of indirect statements. Questions, exclamations, and commands are converted into indirect speech as follows:

INDIRECT QUESTION: dependent wh-clause or if-clause

INDIRECT EXCLAMATION: dependent wh-clause

INDIRECT COMMAND: to-infinitive clause (without subject)
11.56 The complex sentence

For example:

`Are you ready yet?` asked Joan (yes-no question)

→ Joan asked (me) whether I was ready yet

`When will the plane leave?` I wondered (wh-question)

→ I wondered when the plane would leave

`What a hero you are!` Margaret told him (exclamation)

→ Margaret told him what a hero he was

`Keep still!` she said to the child (command)

→ She told the child to keep still

What has been said about back-shift applies to questions and exclamations as well as to statements. Indirect commands, in contrast, cannot incorporate back-shift, as they contain no finite verb. The reporting verb, in the case of indirect commands, has to be followed by an indirect object or prepositional object: for the indirect speech version of `Sit down;` I snapped, one would write not *I snapped to sit down, but I snapped at him to sit down. With a verb like sneer one could render an indirect command with tell and an appropriate adverbial:

`Go back to the nursery,` he sneered

→ He told them (sneeringly) with a sneer to go back to the nursery

Note

Alternative questions are made indirect with whether . . . or on a model similar to yes-no questions:

Are you satisfied or not? → I asked him whether or not he was satisfied

11.56 The modal auxiliaries and indirect speech

Although He would go is not the past of He will go (3.51), it is the back-shifted form in indirect speech. So too with the other modal auxiliaries:

`May I go?` she asked → She asked if she might go

If a modal auxiliary in direct speech has no past tense equivalent (this includes auxiliaries which are already past, such as could, might, as well as must, ought to, need, and had better), then the same form remains in indirect speech:

`I would like some tea,` he said → He said (that) he would like some tea

The element of speaker involvement which is often present in the meaning of some modal auxiliaries (eg: may = `permission`, 3.49) is naturally assigned in indirect speech to the subject of the indirect statement. Thus,

11.58 Transferred negation

John said that I might go would mean that John was giving me permission to go (corresponding to the direct `You may go`), whereas I might go outside indirect speech would mean that I was considering the possibility of going.

Note

If the reporting verb phrase is modal and perfective (I+II, 3.24), it counts as past for purposes of the back-shift rule. Compare:

He asked what John is doing

He has asked what John is doing

but

He may have asked what John was doing

11.57 Free indirect speech

Free indirect speech is a half-way stage between direct and indirect speech, and is used extensively in narrative writing. It is basically a form of indirect speech, but (1) the reporting clause is omitted (except when retained as a parenthetical comment clause), and (2) the potentialities of direct-speech sentence structure (direct question forms, vocatives, tag questions, etc) are retained. It is therefore only the back-shift of the verb, together with equivalent shifts in pronouns, determiners, and adverbs, that signals the fact that the words are being reported, rather than being in direct speech:

So that was their plan, was it? He well knew their tricks, and would show them a thing or two before he was finished. Thank goodness he had been alerted, and that there were still a few honest people in the world!

Very often, in fiction, free indirect speech represents a person’s stream of thought rather than actual speech. It is quite possible, therefore, that he thought would be the appropriate reporting clause to supply for the above passage, rather than he said.

11.58 Transferred negation

There are several ways in which ‘indirect speech’ involving mental activity verbs (he thought, etc) differs from that where the reporting verb is one of language activity (he said, etc). A very important difference involves negation; thus, while both clauses can be made independently negative with say, etc:

He did not say that Mary was pretty

He said that Mary was not pretty

(so that these two sentences are sharply different in meaning), it is usual
With *think, believe, suppose, imagine, expect*, etc. a superordinate negative to apply also in the subordinate clause. For this reason, the following pairs of sentences would normally be regarded as virtually synonymous:

- He didn’t think that Mary was pretty
- He thought that Mary wasn’t pretty
- I don’t suppose he has paid yet
- I suppose he hasn’t paid yet

The transfer of the negation can be seen clearly in the second pair above, with the non-assertive *yet* (7.35) appearing in the subordinate clause even when the verb in this clause is not negated. Another indication is the form of the tag question (7.48f) in:

- I don’t suppose (that) he *cares, does* he?
  (cf. He doesn’t care, *does* he?)

The tag question in this sort of sentence is attached to the *that*-clause rather than to the independent clause, as is clear from the tag subject, *he*. Since a tag question with a falling tone contrasts in positive/negative terms with its main clause, however, we would expect *doesn’t he?* in this context. That in fact a positive tag question occurs is thus evidence of the negativeness of the *that*-clause.

**Note**

[a] Not all verbs in the semantic field of belief, uncertainty, etc. take transferred negation:

- I don’t assume that he came ≠ I assume that he didn’t come

So too *surmise, presume*. Conversely, a few verbs outside the field of mental activity (for example, *seem, happen*) permit the transfer.

[b] A condensed sentence like *I don’t think so* contains transferred negation, and is thus synonymous with *I think not*; cf. 10.36.

**Bibliographical note**

On nominal clauses, see Lees (1969a); Vendler (1968), especially Part I. On comparative clauses, see Huddleston (1971). On non-finite clauses, see Hudson (1971).

---

**TWELVE**

**THE VERB AND ITS COMPLEMENTATION**

12.1

This chapter will deal with units which complement the verb and which are, in general, obligatory in clause structure (but cf. 1.3f, and also the possibilities for ellipsis discussed in 9.21ff). We have earlier (2.7f) distinguished between different categories of verbs with respect to their potentialities for complementation. We shall here discuss these categories in greater detail, concentrating in turn on intransitive verbs, intensive verbs, and transitive verbs. But before we do so, we shall consider cases where the main verb and one or more particles seem to combine as a multi-word verb.

12.2

**Intransitive phrasal verbs**

One common type of multi-word verb is the intransitive phrasal verb consisting of a verb plus a particle, as exemplified in:

- The children were **sitting down**
- He is playing **around**
- Drink up quickly
- Get up at once
- The plane has now **taken off**
- Did he **catch on**?
- The prisoner finally **broke down**
- He turned up **unexpectedly**
- When will they **give in**?
- The tank **blew up**

Most of the particles are place adjuncts or can function as such (8.25). Normally, the particle cannot be separated from its verb (*Drink quickly up*), though particles used as intensifiers or perfectives (8.25) or referring to direction can be modified by intensifiers (*Go right on*).

A subtype of intransitive phrasal verb has a prepositional adverb (6.5) as its particle, the particle behaving as a preposition with some generalized ellipsis of its complement:

- He **walked past** (the object/place)
- They **ran across** (the intervening space)
In some instances, the particles form the first element in a complex preposition:

*Come along* (with us/me)
They moved out (of the house)

Phrasal verbs vary in the extent to which the combination preserves the individual meanings of verb and particle. In instances like give in ('surrender'), catch on ('understand'), and turn up ('appear'), it is clear that the meaning of the combination cannot be predicted from the meanings of the verb and particle in isolation.

### 12.3 Transitive phrasal verbs

Many phrasal verbs can take a direct object:

- We will set up a new unit
  - They are bringing over the whole family
- Find out whether they are coming
  - She is bringing up her brother's children
- Drink up your milk quickly
  - They called off the strike
- Turned on the light
  - I can't make out what he means
- They gave in their resignation
  - He looked up his former friends
- He can't live down his past

As we see from the examples here and in 12.2, some combinations (drink up, give in) can be either transitive or intransitive, with or without a difference of meaning (cf App I.30). With most transitive phrasal verbs, the particle can either precede or follow the direct object:

*They turned* on the light

although it cannot precede personal pronouns: *They turned it on* and not *They turned on it* (except, rarely, with contrastive stress: App II.9). The particle tends to precede the object if the object is long or if the intention is that the object should receive end-focus (14.2).

Many transitive phrasal verbs have prepositional adverbs:

*They dragged* the case along
*They moved* the furniture out

In these examples the particles have literal meanings. We can contrast

She took in the box ('brought inside')
She took in her parents ('deceived')

As with the intransitives, transitive phrasal verbs vary in the extent to which they form idiomatic combinations. For example, the verb and particle in put out the cat preserve their individual meanings in that combination and in a wide range of other combinations (eg: put + down/out-side/away/aside; take/too/bring/push/send/drag + out). There are fewer alternative combinations that the verb and particle in turn out the light can enter (turn + on/off/down/up; switch + on). Finally, in put off ('postpone') the verb and particle are fused into a new idiomatic combination, which does not allow for contrasts in the individual elements.

Note

With put N out we can compare put N straight and other complex transitive constructions (12.26).

### 12.4 Prepositional verbs

The preposition in a prepositional verb must precede its complement. Hence, we can contrast the prepositional verb call on ('visit') with the phrasal verb call up ('summon'):

They called on the man
They called up the man

They called on him
They called up him

*They called the man on
They called the man up

*They called him on
They called him up

On the other hand, the prepositional verb allows an inserted adverb after the verb and a relative pronoun after the preposition:

They called early on the man
They called early up the man

The man on whom they called
The man up whom they called

In general, prepositional verbs, such as call on or look at, plus their prepositional complements differ from single-word verbs plus prepositional phrases, as in They called at the hotel and They called after lunch, in that they allow pronominal questions with who(m) for personal noun phrases and what for non-personal noun phrases but do not allow adverbial questions for the whole prepositional phrase:

They called on the man ~ Who(m) did they call on?
~ *Where did they call?
They looked at the picture ~ What did they look at?
~ *Where did they look?
They called at the hotel (or after lunch) ~ *What did they call at (or after)? ~ *Where (or when) did they call?

Many prepositional verbs allow the noun phrases to become the subject of a passive transformation of the sentence:

They called on the man ~ The man was called on
They looked at the picture ~ The picture was looked at
Other prepositional verbs do not occur in the passive freely, but will do so under certain conditions, such as the presence of a particular modal:

Visitors didn’t walk over the lawn

~ ?The lawn wasn’t walked over (by visitors)
Visitors can’t walk over the lawn

~ The lawn can’t be walked over (by visitors)

Other examples of prepositional verbs: ask for, believe in, care for, deal with, live in, long for, object to, part with, refer to, write about.

Like phrasal verbs, prepositional verbs vary in their idiomaticity. Highly idiomatic combinations include go into (a problem), ‘investigate’, come by (the book), ‘obtain’.

12.6 Phrasal-prepositional verbs

Some multi-word verbs consist of a verb followed by two particles:

He puts up with a lot of teasing (‘tolerates’)

As with prepositional verbs, we can analyse these as transitive verbs with the following noun phrase as direct object. They allow pronominal questions and under certain conditions can occur in the passive:

He can’t put up with bad temper ~ What can’t he put up with?

~ Bad temper can’t be put up with for long

As with single-word transitives and prepositional verbs, we cannot insert an adverb immediately before the object:

*He puts up with willingly that secretary of his

though it is possible to do so between the particles:

He puts up willingly with that secretary of his

We look forward eagerly to your next party

In relative clauses and questions, the particles are positioned after the verb:

The party we were looking forward to so eagerly

Who(m) does he put up with willingly?

or (less commonly) the final particle can be brought into initial position:

The party to which we were looking forward so eagerly

With whom does he put up willingly?

Like phrasal and prepositional verbs, these multi-word verbs vary in their idiomaticity. Some, like stay away from (‘avoid’), are easily understood from their individual elements, though often with figurative meaning, eg: stand up for (‘support’). Others are fused combinations, and it is difficult or impossible to assign meaning to any of the parts, eg: put up with (‘tolerate’). There are still others where there is a fusion of the verb with the first particle or where one or more of the elements may seem to retain some individual meaning. For example, put up with can also mean ‘stay with’, and in that sense put up constitutes a unit by itself (cf: stay with, put up at, and the transitive phrasal verb put up in I can put you up). Similarly, check up on (his record), ‘investigate’, is analysable as consisting of the prepositional verb check on plus the intensifying up. We also have the single-word verb check, and therefore three transitive verbs of similar meaning, together with the intransitive check and check up.
Other examples of phrasal-prepositional verbs: *break in on (the conversation)*, ‘interrupt’; *cut down on (expenses)*, ‘curtail’; *get away with (such behaviour)*, ‘avoid being reprimanded or punished for’; *look down on (somebody)*, ‘despise’; *look in on (somebody)*, ‘visit’; *look up to (somebody)*, ‘respect’; *walk out on (the project)*, ‘abandon’.

12.7 Intransitive verbs
There are some verbs that are always intransitive, ie can never take an object:

Your friends have arrived

Other verbs can be either intransitive:

He smokes every day  The tomatoes are growing well

or transitive, with or without a change in participant role:

He smokes cigars every day  He is growing tomatoes

In this book we regard verbs that can be either intransitive or transitive as belonging to two categories. We consider the relation between, for example, the intransitive verbs *smoke* and *grow* and the transitive verbs *smoke* and *grow* to be that of conversion (7.3, 7.10, App I.30).

Note on
[a] The verb *live* takes an adjunct as an obligatory element. *Live* in the sense ‘reside’ requires a position adjunct (*He lives in China*) and in the sense ‘maintain life’ or ‘subsist’ a process adjunct (*He lives very comfortably, They live on rice*). For *live* in the sense ‘be alive’ a time adjunct is virtually obligatory (*They lived in the nineteenth century*). The verb *get* also has an obligatory adjunct use; in this case the obligatory adjunct is a direction adjunct (*I‘ll get into the car*).

[b] Some of the intransitive phrasal verbs could not be used intransitively if the particle were omitted. Besides *get* as in *get up* (‘arise’), the verbs include *find* (‘find out, discover’), *keep* (‘keep away, stay away’), *set* (‘set off, depart’).

[d] Verbs of measure require an adjunct, usually a noun phrase: *welsh (five pounds), cost (f5 dollar), contains (much).* *Cf i.14 Note.

Intensive complementation

12.8 Copulas
There is intensive complementation of the verb when a subject complement is present (7.6). The verb in such a sentence is a ‘copula’ or ‘linking verb’. The most common copula is *be*. Other copulas fall into two main classes, according to whether the role of the subject complement is that of current attribute or attribute resulting from the event described in the

12.9 Noun and adjective phrases as subject complement

The copulas which allow the widest range as subject complement are *be* for current attribute and *become* for resulting attribute:

**John became a doctor**

Like the other copulas, *be* is commonly used to introduce a characterization or attribute of the subject, as in the example just given, but with complement noun phrases it also commonly introduces an identification of the subject:

**John was the doctor (that I mentioned)**

The verb *feel* has two copula uses. In the meaning ‘have a sensation’ the subject must be personal and the complement an adjective or gradable noun:

**He felt foolish/fill/a fool**

In the meaning ‘give a sensation’, the subject is concrete but without other restriction, the complement being adjectival only:

**The table felt rough**

Note on
[e] *Look* requires a visual feature:

The pit looked a danger to health
The smell (*smelled*) a danger to health

*Turn* is used to indicate a change of occupation or allegiance: *He turned plumber!* *Democratic*! 

Adjectival complementation is restricted to a few items, eg: *go mad/bald*. Both *turn* and *go* are normally disparaging, and with *both* the indefinite article is omitted before a noun phrase.

[f] Where the subject is a clause, the subject complement must be an adjective phrase or a generic noun modified by an adjective:
The verb and its complementation 12.10

That he didn’t come was a strange thing.

I saw him there.

Usually, of course, this structure has extraposition (14.24 f): It was a strange thing... cf 12.13.

12.10 Predicative adjuncts

The only copula that allows an adverbial as complementation is be (5.42). The adverbials, termed predicative adjuncts in this function, are mainly place adjuncts (8.25):

The children are at the zoo/... are outside.

but time adjuncts are also common with an eventive subject (8.44):

The party will be at nine o’clock/... will be tonight.

Other types of predicative adjuncts:

The two eggs are for you ['recipient' adjunct: 6.29]
The drinks are for the journey ['purpose' adjunct: 6.28]
The increase in food prices this year was because of the drought ['cause' adjunct: 6.27]
Transport to the mainland is by ferry ['means' adjunct: 6.31 f]

Complementation of adjective phrase as subject complement 12.11

Adjective complementation by prepositional phrase

Some adjectives (at least when used in a particular sense) require complementation by a prepositional phrase, the preposition being specific to a particular adjective:

Joan is fond of them.
They are conscious of their responsibility.
We are bent on a vacation in Mexico.

Other adjectives that must be complemented by a prepositional phrase include the following, which are listed together with the required preposition: intent on, reliant on, averse to, liable to, subject to, inclined to, (un)familiar with.

Many adjectives can take such complementation but are not obliged to. Usually, the prepositions are specific to a given adjective or to a given kind of complementation:

They were afraid of him (‘They feared him’)
for him (‘They were anxious about him’)
of leaving the house

Adjective complementation by finite clause 12.12

He was angry at Mary’s getting married with Mary for getting married about the wedding.

As these examples show, the complement of the preposition can be an -ing participle clause (6.2), whose subject, if introduced, may or may not be a genitive (11.18). As well as the stylistic choice there can be differences in semantic implication, cf 13.23 Note. Thus,

I am angry at Mary getting married.

could imply anger at Mary because she has got married (cf: I am angry at Mary for getting married) rather than merely anger at the marriage (cf: I am angry at the fact that Mary got married), which would be the obvious interpretation of... angry at Mary’s...

When -ed participial adjectives are used, the constructions have active analogues:

John is interested in English grammar ~ English grammar interests John.
We were worried about the situation ~ The situation worried us.
We was surprised at her behaviour ~ Her behaviour surprised him.

The verbs in the active have a causative feature, eg: The situation worried us ~ The situation caused us to worry.

Finite clauses as complementation may have

(a) indicative verb: I am sure that he is here now.
(b) putative should: I was angry that he should ignore me.
(c) subjunctive verb (3.46): I was adamant that he be appointed (formal in BrE, but cf 12.17 Note).

An indicative verb is used if the adjective is ‘factual’, ie concerned with the truth-value of the complementation. An indicative verb or putative should (11.51) is used if the adjective is ‘emotive’, ie concerned with attitude. A subjunctive verb or should (sometimes putative, but often obligatory) is used if the adjective is ‘volitional’, ie expressing indirectly some command. (For adverb analogues to the first two types of adjective, see 8.50 ff.) The subjunctive is more usual in AmE in such cases, while BrE prefers should.

The finite clause is commonly a that-clause, but factual adjectives admit wh-clauses as well: I'm not sure why he came, I'm not clear where she went. Clauses introduced by whether or (less commonly) if are used with factual adjectives if the adjective is negative or has a negative sense:
The verb and its complementation 12.13

\{I'm not sure \} \{whether\} he is here yet
\{I'm doubtful\} \{if\} he is here yet

Personal subject + copula + adjective phrase + finite clause:

factual adjective: I am aware that he was late
emotive adjective: He is angry that \{they should be late\}
I am amazed that \{he should have got the post\}
volitional adjective: He was \{keen\} \{insistent\} that \{they be present\}
(formal in BrE)
they should be present

With emotive adjectives, the complementation expresses cause. This can be shown by a variant construction in which the complementation is the subject of the sentence. It is particularly evident when the emotive adjective is participial, in which case there is a corresponding active (cf. 12.13):

He is angry that they should be late ~ That they should be late has made him angry.
I am amazed that he got the post ~ That he got the post amazes me

Participial adjectives in this construction are commonly emotive adjectives.

12.13
Adjective complementation by to-infinitive clauses
We distinguish five main types of construction in which the adjective phrase is followed by a to-infinitive clause. They are exemplified in the following five sentences, which are superficially similar, though, as we shall see, only 2, 3, and 4 are wholly concerned with adjective complementation:

(1) Bob is splendid to wait
(2) Bob is slow to react
(3) Bob is furious to hear it
(4) Bob is hesitant to agree with you
(5) Bob is hard to convince

In Types 1–4, the subject of the sentence (Bob) is also the subject of the infinitive clause. We can therefore always have a direct object in the infinitive clause in these four types if the verb is transitive. For example, for Type 1 if we replace intransitive wait by transitive make, we can have Bob is splendid to make that for you.

Type 1 (Bob is splendid to wait) has an analogue with a construction

involving extraposition (14.24 f): It is splendid of Bob to wait. As alternatives to the adjective phrase, we can use a noun phrase that has as its head a degree noun (4.3 Note) or a generic noun modified by an adjective: David must be (quite) a magician to make so much money, Bob is a splendid man to wait.

In Type 2 (Bob is slow to react), the sentence has an analogue in which the adjective is transformed into an adverbial:

Bob is slow to react ~ Bob reacts slowly
In Type 3 (Bob is furious to hear it), the head of the adjective phrase is an emotive adjective (commonly a participial adjective) and the infinitive clause expresses causation:

Bob is furious to hear it ~ To hear it has made Bob furious
~ It has made Bob furious to hear it
I was excited to be there ~ To be there excited me
~ It excited me to be there

In Type 4 (Bob is hesitant to agree with you), the head of the adjective phrase is a volitional adjective. Common adjectives in this type are eager, keen, willing, reluctant. Along with Type 3, this type often admits feel as the copula.

In Type 5 (Bob is hard to convince), the subject of the sentence is the object of the infinitive clause, which must therefore have a transitive verb (*Bob is hard to arrive). We distinguish two subtypes:

(a) There is an analogue with a construction in which the adjective is complement to the infinitive clause:

Bob is hard to convince ~ To convince Bob is hard
~ It is hard to convince Bob
The adjectives used in this subtype are chiefly hard, difficult, impossible, easy, convenient. Unless there is ellipsis, we cannot omit the infinitive clause, and hence there is no semantic relation between the sentences Bricks are hard to make and Bricks are hard.
(b) There are no analogues of the kind that we have exemplified: The food is ready to eat (*To eat the food is ready), and we can generally omit the infinitive clause: The food is ready.

As with Type 1, we can use a noun phrase as an alternative to the adjective phrase: Bob is a hard man to convince; Bob is a pleasure to teach. In both (5a) and (5b), the subject of the sentence can be the complement of a preposition in the infinitive clause: He is easy to talk to, The paper is flimsy to write on.

See also 12.19 Note b.
Transitive complementation

12.14

Monotransitive verbs require a direct object, which may be a noun phrase, a finite clause, or a non-finite clause (infinitive or participial clause). Prepositional verbs and phrasal-prepositional verbs do not admit as direct object that-clauses (whether that is retained or omitted) or infinitive clauses (6.2). We illustrate the possibilities and restrictions with the prepositional verb approve of:

- the meeting
- what had been decided
- meeting her
- *(that) they should meet
- *to meet her

However, the restriction involving that-clauses applies only if the that-clause is direct object, and hence the preposition can be retained in the passive *(They should meet was approved of)*, even in extraposition, where the preposition immediately follows the passive verb phrase *(It was agreed to eventually that they should meet again soon)*.

Note

Certain transitive verbs expressing causation of movement have an adverbial following the direct object, normally an adjunct of place:
- The hostess showed me to the door
- He saw Mary home
- John put the car into the garage
- Mary placed a vase on the table
- We kept them out of trouble

With the above verbs (in the senses exemplified) where the adverbial is obligatory, there is a similarity with complex transitive complementation: cf. 12.26, 8.29, 8.44.

Noun phrases as direct object

12.15

Direct objects are typically noun phrases. It is usually possible for the direct object of an active sentence to become the subject of a passive sentence, with the subject of the active sentence as the prepositional complement in an optional by-phrase (7.5):

- The boy caught the ball ~ The ball was caught (by the boy)
- It is, however, usual to omit the by-phrase, often because it is irrelevant or unknown, as in
- Order has been restored without bloodshed and without concessions
- The Prime Minister was attacked last night during the debate
- or because it is redundant in the context, as in
- Jack fought Michael last night and Jack was beaten

12.16 Noun phrases as direct object

The passive transformation is blocked when there is co-reference between subject and object, ie when there are reflexive, reciprocal, or possessive pronouns in the noun phrase as object:

- John could see *(Paul himself)* in the mirror
- *(Paul *Hiself)* could be seen in the mirror
- We could hardly see each other in the fog
- *Each other could hardly be seen in the fog
- The other waitress wiped *(the tables)*
- *(Her hands)* were wiped by the other waitress

Note

[a] A shift of meaning may accompany shift of voice in verb phrases containing auxiliaries that have more than one meaning, eg: shall, will, and can (cf. 3.48 ff):
- John cannot do it ~ It cannot be done (by John)
- In the active sentence can would normally be interpreted as expressing ability, whereas in the passive sentence it is interpreted as expressing possibility.

[b] With dynamic verbs (3.35) we can distinguish between *actional* parives, illustrated above in this section, and *statal* passives. The latter express a state:
- The house is already sold
- Corresponding actives require an aspectual shift to the perfect (3.27 ff):
- Someone has already sold the house *(Someone already sold the house)*
- A sentence such as They were married is ambiguous between an actional interpretation (They were married in church yesterday) and a statal interpretation (They were married when I last heard about them).

12.16

A small group of transitive verbs, the most common of which is have, normally do not allow a passive transformation of the sentence:

- They have a nice house
- He lacks confidence
- John resembles his father
- The coat does not fit you

These verbs are sometimes considered to form a separate category of non-transitive verbs taking noun phrases as their complementation (cf. also verbs of measure, 12.7 Note d). They include *reciprocal* verbs such as resemble, look like, equal (Two times three equals six), agree with, mean (*Owist means eye-doctor*); verbs of *containing* or their opposite, such as contain *(The library contains a million books)*, hold *(The audi-
torium holds over a thousand people), comprise, lack; and verbs of 'suiting', such as suit, fit, become (This dress becomes her). Contain and hold occur in a similar sense in the passive but without a by-phrase: A million books are contained in that library.

12.17 Finite clauses as direct object
Like finite clauses as complementation of adjective phrases (12.12), finite clauses as direct object may have an indicative verb, putative should, or a subjunctive verb, depending on the class of the superordinate verb:

(a) factual superordinate verb, with indicative subordinate verb:
They agree that she is pretty
I know how he did it
He forgot why they complained

(b) emotive verb, with indicative verb or putative should:
I regret that she should worry about it
I worry about it

(c) volitional verb, with subjunctive verb (3.46) or should (not clearly differentiated between its putative and obligational uses):
I proposed that he should admit all applicants
He should admit all applicants

Factual verbs that are used to convey an indirect question are followed by clauses with whether or (less commonly) if:

He asked whether they had arrived
He doubted if they had arrived
He didn’t know if they had arrived

A verb may belong to more than one class. For example, He suggested that she went is ambiguous: if suggested is a factual verb, she went is a factual report, whereas if it is a volitional verb, she went is a suggested action. Similarly, within the class of factual verbs, e.g. may be used with both a that-clause and (more commonly in the negative or in a question) a whether/if clause: I didn’t say that whether they had arrived.

Examples of the three classes of verbs are listed.

(a) factual verbs: admit, agree, answer, believe, declare, deny, expect, hope, insist, know, report, say, see, suggest, suppose, think, understand

factual verbs commonly followed by whether/if: ask, discuss, doubt, find out, forget, (not) know, (not) notice, (not) say, wonder

Non-finite clauses without subject
(b) emotive verbs: deplore, prefer, regret
(c) volitional verbs: command, demand, insist, order, propose, recommend, suggest

Finite clauses as direct object can become the subject of a corresponding passive sentence:
Everybody admitted that she sang well
~ That she sang well was admitted (by everybody)

However, it is far more usual for the passive to have extraposition with anticipatory it (14.24f):
~ It was admitted (by everybody) that she sang well

Non-finite clauses as direct object
12.18 Among non-finite clauses as direct object, we distinguish between those with a subject and those without a subject, and within each type between infinitive and participle clauses:

| non-finite clause object | without subject | to-infinitive | He likes to talk
| --- | --- | --- | ---
| -ing participle | He likes talking
| infinitive | He wants her to come
| bare infinitive | He saw her come
| -ing participle | He saw her coming
| -ed participle | He found the seats taken

12.19 Non-finite clauses without subject
In non-finite clauses without an overt subject the verb is either an infinitive preceded by to or an -ing participle (but cf Note e). The implied subject is normally the subject of the superordinate clause. There are verbs which take

(1) only an infinitive clause:
John longed {to do *doing} homework

(2) only a participle clause:
John denied {having stolen *to have stolen} the money
(3) either an infinitive or a participle clause:

John began (to write) a letter

Where both constructions are admitted, there is usually felt to be an aspetual difference that influences the choice. The participle construction generally implies 'fulfilment' and the infinitive construction 'potentiality':

He started (speaking and kept on for more than an hour (to speak but stopped because she objected

Another factor influencing the choice is that the participle tends to express the progressive aspect (3.33 ff.):

I heard the door (slamming all night long (slam just after midnight)

The progressive aspect may also influence a preference for the participle after verbs of beginning, continuing, and ending, when multiple activities are involved:

He began (opening all the cupboards (to open the cupboards

While some verbs in this semantic group allow both constructions (begin, continue, cease, start), others allow only the participle construction (finish, go on, keep (on), stop).

For the three verbs forget, remember and regret, there is a temporal (and perhaps also modal) difference between the two constructions. The infinitive construction indicates that the action or event takes place after the mental process denoted by the verb has begun, while the reverse is true for the participle construction:

I remembered to fill out the form ('I remembered that I was to fill out the form and then did so')
I remembered filling out the form ('I remembered that I had fill...out the form')
I forgot to go to the bank ('I forgot that I was to go to the bank and therefore did not do so')
I forgot (about) going to the bank (rare without about, 'I forgot that I went to the bank')
I regret to tell you that John stole it ('I regret that I am about to tell you that John stole it')
I regret telling you that John stole it ('I regret that I told you that John stole it')

12.20 Complex transitive complementation

For one small group of verbs (deserve, need, require, and, less commonly, want), the choice involves a difference in voice, the participle construction corresponding to a passive infinitive construction:

Your shoes need (to be cleaned)

We list some common verbs according to the non-finite clauses that they allow, omitting the three small groups that we have discussed above:

verbs with infinitive only: agree, arrange, ask (see Note d), choose, decide, demand, deserve, expect, hope, learn, long, manage, mean, offer, pretend, promise, refuse, threaten, want, wish
verbs with participle only: deny, dislike, enjoy, fancy, finish, (cannot) help, keep (on), don't mind, miss, put off, risk, cannot stand, stop, suggest
verbs with infinitive or participle (mainly emotive verbs or verbs expressing striving or lack of striving): cannot bear, delay, hate, intend, like, love, neglect, omit, plan, prefer, try

There is in general no passive for sentences whose object is a non-finite clause without a subject. The exceptions are with a few verbs (notably agree, arrange, decide) and then only if there is extraposition:

They decided to meet in London ~ It was decided to meet in London

Note
[a] With verbs like need, the subject of the superordinate clause is not the implied subject of the participle clause, but rather its implied direct object: Your shoes need cleaning implies that you or someone needs to clean the shoes.
[b] We might consider here also several verbs with infinitive clauses which are not direct objects. With appear, happen, and seem, the infinitive clause is more plausibly seen as part of the subject: He appears to like the show ~ That he likes the show appears to me. The quasi-advverbal function of the main verb can be shown by the paraphrase He apparently likes the show. There are analogies with such adjectives as sure, certain, bound in relation to infinitive clauses: He is certain to like the show ~ That he will like the show is certain ~ He will certainly like the show.
[c] The verb 'help' can be followed by a construction with the bare infinitive: I helped her (to) do it. Otherwise, the bare infinitive is found only in a few set phrases, eg: make do, make believe, etc etc. let live, let go.
[d] Some factual verbs will permit as direct object a non-finite indirect question, but not of the yes-no type: He asked (inquired) how to get there. Of: He arranged, forgot when to do it.

Complex transitive complementation

12.20

Non-finite and verbal clauses with subject

When a clause as object in a monotransitive sentence (a) is non-finite or
verbless, and (b) has its subject expressed, this subject behaves as though
12.23 Bare infinitive clauses with subject

With some of the superordinate verbs no finite-clause construction of this type is possible: notably, get, want, like:

John wanted Mary to play the piano
(but that Mary (should) play the piano occurs in AmE)

Other common non-factual verbs: cause, expect, hate, mean.

When the subject of the subordinate clause is identical with that of the superordinate one, the non-finite construction is possible with factual and causative verbs only if the reflexive is expressed (as it commonly is with get):

I believed that I had won
I believed myself to have won (rare)
*I believed to have won

With volitional and attitudinal verbs, however, co-referential subjects are readily allowed but the subordinate subject cannot be expressed in the non-finite clause (cf 12.19):

I intended that I should go
I intended to go

Note

A few verbs, get, hate, like, want, do not have a corresponding passive, while a few others, in particular say, occur only in the passive form of the construction:

He was said to come from Ireland ~ *They said him to come from Ireland

12.22 Prepositional verbs with for use for to introduce a to-infinitive clause:

He arranged for Mary to come at once

The infinitive construction is therefore a direct object of the prepositional verb, which may be emotive or volitional. Some common verbs with this construction: ask, call, long, plan, wait.

Note

Prepositional verbs that are ditransitive allow another object (perhaps also introduced by a preposition) to precede the infinitive clause:

He telephoned arranged with John for Mary to come at once

Cf: He telephoned John/He arranged with John for another meeting.

12.23 Bare infinitive clauses with subject

Three causative verbs take a bare infinitive in their infinitive clause: have ("cause"), let, make:

They had/let/made Bob teach Mary
The verb and its complementation 12.24

Some verbs of perception take the bare infinitive in the active: *feel, hear, notice, observe, see, smell, watch.* The verbs of perception also occur with the -ing participle clause (12.24):

I watched Bob teaching Mary

In the passive, the bare infinitive is replaced by the to-infinitive: Bob was made to clean his room, They were heard to shout something. This does not apply to have and let, which have no passive, except for perhaps as in He was let go. Only let has a passive of the infinitive clause: They let Mary be taught (by Bob). With the verbs of perception, there is a passive with being (12.24): I watched Mary being taught (by Bob). For the passive corresponding to the infinitive clause after have and see as in I had Bob teach Mary ~ I had Mary taught (by Bob), see 12.25.

12.24 -ing participle clauses with subject

Verbs taking an -ing participle clause fall into two classes: those which permit the subordinate subject to be genitive (predominantly emotive verbs with personal nouns or pronouns) and those which disallow the genitive.

Genitive optional (cf II.18):

I dislike him/his driving my car

With this type, the subject of the subordinate clause cannot be the subject of the superordinate clause in the passive: *He is disliked (by me) driving my car.* When the superordinate and subordinate subjects are co-referential, the subordinate subject is not expressed: I dislike driving my car.

Genitive disallowed:

I found him *hers* driving my car

With this type, the subject of the subordinate clause can be the subject of the superordinate clause in the passive: He was found driving my car. When the superordinate and subordinate subjects are co-referential, the subordinate subject is expressed by the reflexive: I found myself driving my car.

Where there is a choice between -ing participle or infinitive (whether bare or to-infinitive), there is usually felt to be an aspectual difference that influences the choice (12.19):

I hate the door slamming all night long to slam just after midnight

12.25 -ed participle clauses with subject

Verbs taking a non-finite clause with subject may have

(1) only an -ing participle clause:

I started Bob cleaning the car

(2) either an -ing participle or a bare infinitive clause:

I watched Bob doing his homework
do his homework

(3) either an -ing participle or a to-infinitive clause:

I hate Bob working in the garden
to work in the garden

We list common verbs according to whether they permit or disallow the genitive and within each class, we note the verbs which, in addition to the -ing construction, permit the infinitive construction, with or without to:

genitive optional: (1) -ing participle only: (cannot) afford, enjoy, forget, (not) mind, regret, remember, resent, risk, (cannot) stand; (2) -ing participle or to-infinitive: dislike, hate, like, love, prefer genitive disallowed: (1) -ing participle only: catch, find, keep, lose, start, stop, (2) -ing participle or bare infinitive: have ('cause'); verbs of perception - feel, hear, notice, observe, see, smell, watch -ing participle or to-infinitive: get, informal (I got Bob cleaning/to clean his room)

12.25 -ed participle clauses with subject

We can distinguish between three types of construction involving -ed participle with subject:

causative/volitional verb: He got the watch repaired

factual verb expressing an event: He saw the watch stolen

factual verb expressing a current state: He found the watch stolen

Some of the causative/volitional verbs have analogous finite clauses with a subjunctive verb or should (12.17): He ordered that the watch (should) be repaired. Similarly, the factual verbs have analogous finite clauses with an indicative verb: He saw the watch stolen ~ He saw that the watch was being stolen. He found the watch stolen ~ He found that the watch was stolen. Have can be either causative or factual: thus He had a watch stolen is ambiguous between 'He caused the watch to be stolen' and 'He suffered the loss of a watch' (14.23 Note a).
Common verbs of the three types are:
causative/volitional: get, order, have ('cause'), want
factual, expressing event: see, have ('suffer')
factual, expressing state: find, keep, leave

The factual verbs allow passivization:
The tourists found the chairs occupied
~The chairs were found occupied (by the tourists)

Verbless clauses with subject
12.26
In both the -ing and -ed clauses just considered, it is reasonable to see the non-finite clauses in many cases as resulting from ellipsis of infinitival be:
I hate him (to be) driving my car
They found the chairs (to be) occupied

With complementation by verbless clauses, we can also see underlying be clauses:

\[
\begin{align*}
\text{I hate him} & \text{ (to be) driving my car} \\
\text{they found the chairs} & \text{ (to be) occupied}
\end{align*}
\]

The two elements of such verbless clauses are thus in an intensive subject-complement relation, but since the whole construction is itself the object in the superordinate clause, we do not depart from the tradition of describing them as object and object complement respectively. As with other transitive sentences, the 'object' can be the subject in a passive transformation (John is considered a good driver), and as with other intensive clauses, the complement element can usually be realized by either a noun phrase or an adjective phrase:

He made the girl \( \text{(his secretary, much happier) \{ } \)

When the object complement is an adjective it may be a 'current' or a 'resulting' attribute (7.9). Verbs taking a current attribute include: call, consider, declare, find, have, keep, leave, like, prefer, think, want:

I called him stupid
I always have my coffee hot

Verbs taking a resulting attribute: get, make, paint, as well as call, declare, etc, in their formal 'performative' use:

I made her very angry
I declare the meeting open

12.27 Verbless clauses with subject

Some combinations of verb and adjective resemble transitive phrasal verbs (12.3) in that the adjective can precede or follow the noun phrase and (like the particle) cannot precede a personal pronoun:

She put the tablecloth straight  \text{She put the tablecloth out}
She put it straight  \text{She put it out}
She put straight the tablecloth  \text{She put out the tablecloth}
*She put straight it  \text{*She put it out}

Likewise, the adjective cannot be separated from the verb by an adverb as adjunct:

She quickly put the tablecloth straight  \text{She quickly put the tablecloth out}
*She put quickly the tablecloth straight  \text{*She put quickly the tablecloth out}
*She put the tablecloth quickly straight  \text{*She put the tablecloth quickly out}

Make is commonly the verb in such combinations: make clear (the reason), make possible (the meeting), make plain (the difference). Among adjectives, open, loose, free, and clear are particularly common: push open, keep, loose, shake free, leave clear. In many cases, there is a close meaning relationship between verb and adjective: cut short, wash clean, drain dry, pack tight.

The adjective retains its potentialities for modification:

He pushed the door wide open
She didn't wash the shirts as clean as Mary did

12.27 Many of the verbs mentioned in 12.26 as taking adjective phrases as object complement will also admit noun phrases (exceptions include get, hate and put). When the object complement is a noun phrase it can, as with the adjective phrase, be 'current' or 'resulting'. In general, however, the noun phrase as current attribute is uncommon and somewhat formal (unless it is indefinite with a gradable noun head and hence with an adjectival quality):

They thought John the leader (rather uncommon)
They thought John a fool

As resulting attribute, on the other hand, the noun phrase is freely used:

They \text{elected John \{the chairman \{the ambassador to Peru \}
They made John a useful mechanic
The verbs appoint, crown, elect, and consider are commonly used with an alternative as construction:

They elected him (as) their leader.

The following verbs are among those that can have complex complementation only with as or (less commonly) for: accept as, class as, describe as, intend as, interpret as, know as, mistake for, recognize as, regard as, take as for, treat as, use as for, for example: They recognized John as intelligent, their spokesman.

Most verbs taking a noun phrase as object complement will also admit an adjective phrase; outstanding exceptions include verbs of appointing such as appoint, choose, elect, name.

Note
The object complement may precede the 'direct object' when the latter is lengthy or requires special emphasis:

They will elect chairman anyone willing to serve

He thought desirable most of the women in the room

Lately, an analogous inversion can occur with the -ing and -ed clauses of 12.24.f.

[1] Cf. also 12.3.

**Ditransitive complementation**

**12.28**

**Noun phrase as both indirect object and direct object**

Ditransitive complementation involves two objects that are not in intensive relationship (7.6): an indirect object (normally animate), which is positioned first, and a direct object (normally concrete):

He gave the girl a doll

S V O1 O2

Indirect objects can be omitted without affecting the meaning or function of the rest of the sentence:

He gave the girl a doll

\[ \sim \text{He gave a doll} \]

\[ \sim \text{He gave the girl} \]

He bought the girl a white hat

\[ \sim \text{He bought a white hat} \]

\[ \sim \text{He bought the girl} \]

They can usually be replaced by a corresponding prepositional phrase, which normally follows the direct object:

He gave a doll to the girl

He bought a white hat for the girl

We list some common verbs which allow the indirect object to be replaced by a prepositional phrase, the preposition concerned being indicated:

**12.29** Ditransitive prepositional verbs

ask (a question) of (John), bring to, do (a favour) for, do (a disservice) to, find for, give to, leave for/to, lend to, make for, offer to, owe to, pay for, pour for, promise to, read to, save for, show to, teach to, tell to, throw to

A few verbs disallow the variant with a prepositional phrase: allow, refuse, wish. With allow and wish, it would be exceptional to have either of the noun phrases omitted.

One group of verbs (chiefly ask, owe, pay, teach, tell, show) taking ditransitive complementation allow either object to be omitted:

I paid John the money \[ \sim \text{I paid John} \]

\[ \sim \text{I paid the money} \]

\[ \sim \text{I paid the money to John} \]

**Note**

The word give allows considerable flexibility: the direct object can be abstract and the indirect object inanimate, though in such cases the latter has no variant with a prepositional phrase:

He gave the car a wash ("He washed the car")

\[ \sim \text{He gave a wash to the car} \]

Sentences with some ditransitive verbs have two passives:

He gave the girl a doll

\[ \sim \text{The girl was given a doll} \]

\[ \sim \text{A doll was given the girl} \]

Of these two passives, the first is the more common. The second is usually replaced by the corresponding prepositional phrase:

A doll was given to the girl

[6] The verb make admits several different constructions:

monotrans: She made a cake
ditrans: She made him a cake (\( \sim \text{a cake for him} \))
complex trans: She made him a good husband (\( \sim \text{him into a good husband} \))
intensive: She made a good wife
intensive with 'indirect object': She made him a good wife (\( \sim \text{turned out to be a good wife to/him} \))

**12.29** Ditransitive prepositional verbs

Ditransitive verbs whose direct object must be introduced by a preposition (ie ditransitive prepositional verbs) normally allow only one passive, with the indirect object as subject:

We reminded him of the agreement

\[ \sim \text{He was reminded of the agreement} \]

They differ from most ditransitive verbs (cf 12.31) in frequently allowing the indirect object to be expressed alone: We reminded him (of the agreement).
Common verbs of this type enter into constructions of the form *accuse X of Y*, where with most of the verbs X is usually a person and Y is usually a thing:

charge with, compare to, congratulate on, convince of, deprive of, inform of, introduce to, punish for, refer to, remind of, rob of, sentence to, treat to

But there are notable exceptions, such as *explain X to Y*, where X would normally be a thing and Y a person.

With several verbs (eg: blame, provide, supply), either of the noun phrases in the complementation can follow the verb immediately. The other requiring a preposition:

She blamed John for the damage ~ She blamed the damage on John
They provided the homeless with blankets ~ They provided blankets for the homeless
They supplied the terrorists with guns ~ They supplied guns for/to the terrorists

12.30
**Idiomatic expressions consisting of verb+noun phrase+preposition**

Some verbs form an idiomatic unit when combined with certain noun phrases followed by certain prepositions and in this respect resemble many prepositional verbs (12.4). There are two passive forms of the sentence, since either of two noun phrases can become the subject of a passive sentence:

They had made good use of the house
~ Good use had been made of the house
~ The house had been made good use of (informal)

Other examples of the latter kind of passive (chiefly informal) are:

Mary realized she was being made fun of
Her beauty was made much of
Pretty girls will always be taken notice of
The children were taken good care of

The following list includes some common idioms consisting of V+NP+prep:

catch sight of make allowance for put a stop to
give place to make fun of set fire to
give way to make a fuss over/about take account of
keep pace with make room for take advantage of
lose sight of make use of take care of

12.31
**Noun phrases as indirect object+finite clauses as direct object**

With some verbs the indirect object is obligatory:

John convinced me that he was right
~ John convinced that he was right

With other verbs, it can be omitted:

John showed me that he was honest
~ John showed that he was honest

Common verbs in this type of construction are listed according to whether the indirect object is obligatory or optional.

indirect object obligatory: advise, assure, convince, inform, persuade, remind, tell

indirect object optional: ask (+ indirect question), promise, show, teach, war:

The indirect object often occurs without the direct (cf. 12.29).

The sentence can be passivized, with the indirect object as subject of the passive sentence: I was convinced that he was right. The verbs show and tell allow also the direct object to become subject of the passive sentence, though normally there is extraposition: That he was an honest man was shown (to me) ~ It was shown (to me) that he was an honest man.

Some verbs require a prepositional phrase introduced by to instead of the indirect object. They all allow the omission of the prepositional phrase:

John mentioned (to me) that they were sick

They allow a passive form with the direct object becoming subject of the sentence, though normally there is extraposition: That they were sick was mentioned (to me) by John ~ It was mentioned (to me) by John that they were sick. Common verbs used in this construction include admit, announce, confess, declare, explain, mention, point out, remark, report, say, state, suggest.

12.32
**Noun phrases as indirect object+non-finite clauses as direct object**

Many of the superordinate verbs in 12.31 will allow the clausal direct object to be a to-infinitive clause:
They persuaded John (that he should see me (to see me)

This is possible only when the indirect object is identical with the subject of the direct object clause: thus, *They persuaded John that Mary should see me* has no corresponding form with a non-finite clause as direct object. The subject of the non-finite clause can become the subject of a passive superordinate clause:

John was persuaded to see me

Not all verbs taking a finite clause allow the non-finite clause as direct object but among the common verbs that permit both constructions we should mention *ask* (with wh-indirect questions), *persuade, remind, teach, tell* and *warn*. There are several verbs which permit the non-finite clause but which do not (or do not freely) admit the finite clause; for example, *ask* (= 'request'), *encourage, force, help, and order*:

Mary helped John to carry the bag

(*Mary helped John that he might carry the bag*)

There is a superficial similarity between certain complex transitive and ditransitive examples:

complex trans: He wanted Mary to teach Bob

ditrans: He persuaded Mary to teach Bob

The difference can be seen when the subordinate clause is made passive:

He wanted Bob to be taught by Mary

He persuaded Bob to be taught by Mary

This difference depends on the fact that, with complex transitive verbs, the infinitive clause (*Mary to teach Bob*) is direct object and *Mary* is not itself a constituent of the superordinate clause. With the ditransitive verb *persuade*, however, *Mary* as indirect object is indeed a separate constituent (the subject of the infinitive clause in this instance being only implied). In [4], this indirect object function is taken over by *Bob*, and hence the radically changed meaning.

Note
When a wh-clause is object to a verb of stating, the subject is identical with the indirect object; with verbs of asking, however, it is identical with the superordinate subject:

He told them where to go (= *where they should go*)

He asked them where to go (= *where he should go*)

Bibliographical note
On types and problems of complementation, see Ajimé (1972); Allen (1966); Bald (1972); Halliday (1967–68); Huddleston (1971), Ch 3, 4; Macháček (1965); Poldauf (1972); Rosenbaum (1967); van Ek (1966); Stockwell et al (1973), Ch 8.

13.1
Just as the sentence may be indefinitely complex (11.1), so may the noun phrase. This must be so, since sentences themselves can be reshaped so as to come within noun-phrase structure. For example, the following sentences—simple and complex—can become one simple sentence with a very complex noun phrase as subject:

The girl is Mary Smith

The girl is pretty

The girl was standing in the corner

You waved to the girl when you entered

The girl became angry because you waved to her

The pretty girl standing in the corner who became angry because you waved to her when you entered is Mary Smith

Moreover, starting from [2], we could unhesitatingly reconstruct any of the sentences listed in [1]—and in fact we could not understand the noun-phrase subject of [2] unless we recognized its component parts as they are set out in [1]. Yet [2] has introduced many changes. We have suppressed all or part of the verbs in [1b] and [1c] (different in tense and aspect); we have put the complement *pretty* of [1b] before the noun *girl*; we have replaced the *girl* of [1c] by *who*. The purpose of the present chapter is to state the conditions governing such changes.

13.2
In describing complex noun phrases, we distinguish three components:

(a) *The head*, around which the other components cluster and which dictates concord and other kinds of congruence with the rest of the sentence outside the noun phrase. Thus, we can have [1], [2], and [3], but not [4]:

*The pretty girl standing in the corner... is...* [1]

*The pretty girls standing in the corner... are...* [2]
The complex noun phrase 13.3

He frightened the pretty girl standing in the corner [3]
*He frightened the pretty lampshade standing in the corner [4]

That is, there are no constraints affecting frighten and the pretty ... standing in the corner but only frighten and the head lampshade.

(b) The premodification, which comprises all the items placed before the head – notably adjectives and nouns. Thus:

The pretty girl
Some pretty college girls

(c) The postmodification, comprising all the items placed after the head – notably prepositional phrases, non-finite clauses, and relative clauses:

The girl in the corner
The girl standing in the corner
The girl who stood in the corner

13.3 Restrictive and non-restrictive

Modification can be restrictive or non-restrictive. That is, the head can be viewed as a member of a class which can be linguistically identified only through the modification that has been supplied (restrictive). Or the head can be viewed as unique or as a member of a class that has been independently identified (for example, in a preceding sentence); any modification given to such a head is additional information which is not essential for identifying the head, and we call it non-restrictive.

In example [2] of 13.1, the girl is only identifiable as Mary Smith provided we understand that it is the particular girl who is pretty, who was standing in the corner, and who became angry. Such modification is restrictive. By contrast, if a man (in a monogamous society) says

Come and meet my beautiful wife

the modification beautiful is understood as non-restrictive. Again,

Mary Smith, who is in the corner, wants to meet you

has a non-restrictive relative clause since Mary Smith's identity is independent of whether or not she is in the corner, though the information on her present location may be useful enough. In these examples, the modification is inherently non-restrictive, since the heads in question – being treated as unique – will not normally admit restriction. But any head can be non-restrictively modified:

The pretty girl, who is a typist, is Mary Smith

13.5 Postmodification

Here the only information offered to identify the girl as Mary Smith is the allusion to her prettiness; the mention of her work as a typist is not offered as an aid to identification but for additional interest.

Modification at its 'most restrictive' tends to come after the head: that is, our decision to use an item as a premodifier (such as silly in The silly boy got lost) often reflects our wish that it be taken for granted and not be interpreted as a specific identifier. Secondly, restrictive modification tends to be given more prosodic emphasis than the head; non-restrictive modification, on the other hand, tends to be unstressed in pre-head position, while in post-head position, its 'parenthetic' relation is endorsed by being given a separate tone unit (App 11.7), or – in writing – by being enclosed by commas.

13.4 Temporary and permanent

There is a second dichotomy that has some affinities with the distinction between restrictive and non-restrictive but rather more with the contrast of non-progressive and progressive in predication (3.27), generic or specific reference in determiners (4.16), or permanent and temporary in agents (App I.13 Note b). Modification in noun-phrase structure may also be seen as permanent or temporary (5.18), such that items placed in premodification position are given the linguistic status of permanent or at least characteristic. Although this does not mean that post-modification position is committed to either temporariness or permanence, those adjectives which cannot premodify have a notably temporary reference. Thus The man is ready would be understood as having reference only to a specific time and this corresponds to the non-occurrence of *The ready man. On this basis, we see that timidity and fear are contrasted in part according as the first is seen as permanent, the second as temporary:

A man who is timid ~ A timid man
A man who is afraid ~ *An afraid man

Just as some modifiers are too much identified with temporary status to appear in pre-head position, so there can be modification constrained to pre-head position because it indicates permanent status. Compare original in the original version and his work is quite original; in the latter, it would permit adverbial indication of time span (now, always, . . . ), as well as use in premodification.

Postmodification

13.5 Explicitness

As we saw in 13.1, premodification is in general to be interpreted (and
most frequently can only be interpreted) in terms of postmodification and its greater explicitness. It will therefore be best to begin our detailed study of noun-phrase structure with the forms of postmodification.

Explicitness in postmodification varies considerably, however. It is greater in the finite relative clause

The girl who was standing in the corner
than in the non-finite clause

The girl standing in the corner
from which the explicit tense (is? was?) has disappeared, though this in turn is more explicit than the prepositional phrase

The girl in the corner
from which the verb indicating a specific posture has also disappeared. We are able (and usually must be able) to infer such facts as tense from the sentential context much as we infer the subject of non-finite adverbial clauses (11.35):

The girl standing in the corner \( \text{(now \last night)} \) is my sister

Have you spoken to the girl in the corner?

Part of the relative clause’s explicitness lies in the specifying power of the relative pronoun. It is capable (a) of showing agreement with the head and (b) of indicating its status as an element in the relative clause structure.

Agreement is on the basis of a two-term ‘gender’ system, personal and non-personal (4.58 ff, 4.81):

Joan, who ... London, which ...
The boy/people who ... The fox/animals which ...
The human being who ... The human body which ...
The fairy who ... The unicorn which ...

It will be seen from these examples that ‘personality’ is ascribed essentially to human beings but extends to creatures in the supernatural world (angels, elves, etc) which are thought of as having human characteristics such as speech. It does not extend to the body or character, in part or whole, of a human being, living or dead, when this is considered as separate from the entire person. Pet animals can be regarded as ‘personal’ (at least by their owners):

Rover, who was barking, frightened the children

On the other hand human babies can be regarded (though rarely perhaps by their parents) as not having developed personality:

13.7 Relative pronoun and adverbial

This is the baby who needs inoculation

Though ships may take the personal pronoun she (4.64), the relative pronoun is regularly non-personal:

Is she the ship which is due to leave for New York tomorrow?

It is noteworthy that collective nouns (4.62) are treated as personal when they have plural concord, non-personal when they have singular:

The committee who were \( \text{(who was)} \) responsible for this decision ...

13.6 Case in the relative pronoun

Case is used to indicate the status of the relative pronoun in its clause. There are two situations to consider. First, if the pronoun is in a genitive relation to a noun head, the pronoun can have the form whose:

The woman whose daughter you met is Mrs Brown
(The woman is Mrs Brown; you met her daughter)
The house whose roof was damaged has now been repaired
(The house has now been repaired; its roof was damaged)

In examples like the latter where the antecedent head is non-personal, there is some tendency to avoid the use of whose (by using, for example, the roof of which), presumably because many regard it as the genitive only of the personal who.

Secondly, with a personal antecedent, the relative pronoun can show the distinction between who and whom, depending on its role as subject of the relative clause or as object or as prepositional complement:

The girl who spoke to him [1]
The girl to whom he spoke [2]
The girl who(m) he spoke to [3]
The girl who(m) he met [4]

It will be noticed that when the governing preposition precedes its complement (cf 5.3) as in the rather formal [2], the choice of whom is obligatory. When it does not, as in the more informal [3], or when the relative pronoun is the object, as in [4], there is some choice between who or whom, the latter being preferred in written English and by some speakers, the former being widely current informally.

13.7 Relative pronoun and adverbial

The relative pronoun can be replaced by special adjunct forms for place, time, and cause:
That is the place where he was born
That is the period when he lived here
That is the reason why he spoke

There are considerable and complicated restrictions on these adjunct forms, however. Many speakers find their use along with the corresponding antecedent somewhat tautological — especially [3] — and would prefer the wh-clause without antecedent:

That is where he was born
That is when he lived here
That is why he spoke

If how is used, such clauses cannot in any case have an antecedent noun:

That is how he spoke

Moreover, there are restrictions on the antecedent nouns that can occur in [1–3]. With [3], reason is virtually alone, and with [1] and [2], it is also the most general and abstract nouns of place and time that seem to be preferred. Thus while

The office where he works... The day when he was born...

are acceptable to most users of English, others would prefer a prepositional phrase in each case:

The office that at which... (formal) The day on which... (formal)

or one of the less explicit forms that we shall now be considering (The office he works at, The day he was born).

Restrictive relative clauses
Choice of relative pronoun

13.8

Though most of the examples in 13.5 ff have been of restrictive clauses, it is in the non-restrictive relative clauses that the most explicit forms of relative pronoun are typically used. In restrictive clauses, frequent use is made of a general pronoun that which is independent of the personal or non-personal character of the antecedent and also of the function of the pronoun in the relative clause:

The boy that is playing the piano... (or who)
The table that stands in the corner... (or which)
The boy that we met... (or who(m))
The table that we admire... (or which)
The boy that the dog ran towards... (or towards whom)
The table that the boy crawled under... (or under which)

Provided the relative pronoun is not the subject of the relative clause, as in [1] and [2], a further option exists in relative clause structure of having no relative pronoun at all: the clause with 'zero' (\(\emptyset\)) relative pronoun. The examples [3–6] could take this form:

The boy we met... (who(m), that)
The table we admire... (which, that)
The boy the dog ran towards... (towards whom, who(m)/that... towards)
The table the boy crawled under... (under which, which/that...

Some choice exists in placing a preposition which has a wh-pronoun as its complement (13.6); there is no such choice with that and zero, where the preposition must be postposed.

The choices are summarized in the diagram:

\[
\begin{align*}
\text{The} & \quad \{ \text{man} \quad \leftarrow \quad \text{who} \} \\
\text{The} & \quad \{ \text{table} \quad \leftarrow \quad \text{which} \} \\
\text{The} & \quad \{ \text{man} \quad \leftarrow \quad \text{who(m)} \} \\
\text{I saw} & \quad \{ \text{I glanced at} \} \\
\text{The} & \quad \{ \text{table} \quad \leftarrow \quad \emptyset \} \\
\text{I glanced} & \quad \{ \text{at which} \} \\
\end{align*}
\]

Note

Choices are not only connected with relative formality. Some prepositions cannot be postposed (*the meeting that I slept during). Who is often preferred to that when it is subject and when the antecedent is personal (people who visited me); but that is preferred to who(m) when it is object, in part perhaps to avoid the who/whom choice (people that I visited). When the verb in the relative clause is be, the complement pronoun must be that or zero (John is not the man he was). This example illustrates one of the most favored uses of zero: it when the pronoun is object or complement, the subject is pronominal, and the relative clause is short. When the antecedent is long and complex, what pronouns are preferred:

I have interests outside my daily professional work which give me great pleasure
13.9
Just as that and zero are available when the relative pronoun is dominated by a preposition, so they can be used when the relative pronoun is part of a place, time, or cause adjunct. With place adjuncts, the preposition must usually be expressed:

This is the garden (that) he sunbathes in.
This is the university (that) he works at.

But with the time adjuncts, omission of the preposition is usual whether the pronoun is that or zero (cf. 6.25 f):

This is the time (that) he normally arrives (at)
Monday was the day (that) he left (on)

In many cases, indeed, omission of the preposition is obligatory, especially when the antecedent is itself the head of a time adjunct phrase:

He worked the whole time (that) he lived there.

But when (less frequently and more formally) the pronoun is which, the preposition must be expressed in these instances and it would be usual to make it preceed the pronoun (cf. 13.7):

This is the time at which he normally arrives
Monday was the day on which he left

With cause and manner adjuncts, the usual pronoun is that or zero, and there is no preposition:

This is the reason (that) he came
This is the way (that) he did it

But with manner adjuncts, it would not be abnormal to find which with a preposition in a more formal style:

This is the way in which he did it

13.10
Quantified heads
Beside the noun phrase the girls that he knew, we may have one in which the head is made quantitatively indefinite with the pre-determiner such, the relative pronoun that being replaced by as:

Such girls as he knew were at the party

Compare: As many girls as he knew...
A further connection with comparative sentences (cf. 11.37 ff) can be seen in:

More girls than he knew were at the party
Fewer girls than he knew were at the party

13.11
Non-restrictive relative clauses
The loose non-restrictive relationship is often semantically indistinguishable from coordination (with or without conjunction) or adverbial subordination, as we indicate by paraphrases of the examples below. The repertoire of pronouns is limited to the wh-items:

Then he met Mary, who invited him to a party
And she invited him to a party
Here is John Smith, who(m) I mentioned the other day
I mentioned him the other day
He got lost on Snowdon, which was enveloped in fog
When it was enveloped in fog
He got lost on Snowdon, which he was exploring
While he was exploring it

Note
As a determiner, which appears in non-restrictive clauses that are introduced especially by temporal adjuncts, but this is largely in formal style:

He emigrated in 1840, at which time there was much hardship and unrest

13.12
Sentential relative clauses
One type of non-restrictive clause has as its antecedent not a noun phrase but a whole clause or sentence or even sequence of sentences. As with the clauses in 13.11, the relationship frequently resembles coordination, but these clauses are also very much like disjuncts. For example:

He admires Mrs Brown, which surprises me
I find strange

Cf. 'and this surprises me'; 'to my surprise'.
Quite often, which is used in these clauses as a determiner of factive nouns which represent the antecedent clause or sentence:

The train may have been held up, in which case we are wasting our time

13.13
Appositive clauses
The appositive clause (9.58) resembles the relative clause in being capable of introduction by that, and in distinguishing between restrictive and non-restrictive. It differs in that the particle that is not an element in the clause structure (subject, object, etc) as it must be in a relative clause. It differs also in that the head of the noun phrase must be a factive abstract noun
such as *fact* itself, *proposition*, *reply*, *remark*, *answer*, and the like. For example:

The belief that no one is infallible is well-founded
I agree with the old saying that absence makes the heart grow fonder

As with apposition generally (cf. 9.45), we can link the apposed units with *be* (where the copula typically has nuclear prominence):

The belief that no one is infallible (... is ...)  
The old saying is that absence makes the heart grow fonder

Or we may replace deverbal nouns like *belief* by the corresponding verb plus object clause: *He believes that no one is infallible*. It will be noticed that these restrictive examples have the definite article before the head noun; this is normal but by no means invariable (except with a few nouns referring to certainty, especially *fact*):

A message that he would be late arrived by special delivery

Plural heads are also rare with appositive postmodification and are regarded as unacceptable, for example, *with belief, fact, possibility.*

**Note**

Non-restrictive appositive clauses can less easily resemble relative clauses since irrespective of non-restrictiveness they still involve the participle *that*, in sharp contrast with non-restrictive relative clauses:

This fact, that *that* is obligatory, should be easy to remember

**Postmodification by non-finite clauses**

**13.14**

**-ing participle clauses**

Postmodification of the noun phrase is possible with all three of the non-finite clause types (11.3), and the correspondence between restrictive relative and non-finite clauses will be illustrated.

The man who writes is writing the obituary is my friend

The man *writing the obituary* is my friend

The latter will be interpreted, according to the context, as equivalent to one of the former more explicit versions. So too:

A tile falling from a roof shattered into fragments at his feet
("which fell from a roof")

**13.15 -ed participle clauses**

At the station you will see a man carrying a large umbrella
(‘who will be carrying a large umbrella’)
The man *writing on the board* when you came in
(‘who was writing . . .’)

But not all -ing forms in non-finite postmodifiers correspond to progressive forms in relative clauses. Stative verbs, which cannot have the progressive in the finite verb phrase, can appear in participial form:

He is talking to a girl resembling Joan (*‘who resembles Joan’ not ‘*who is resembling Joan’*)
It was a mixture consisting of oil and vinegar (*‘that consisted . . .’*)

In all instances, the antecedent head corresponds to the deleted subject of the non-finite verb clause; there is no non-finite postmodifier, therefore, corresponding directly to the relative clause in

The obituary that *the man is writing* will be published tomorrow
without recourse to the passive, *being written by the man* (13.15).

**13.15**

**-ed participle clauses**

Consider now the different versions of the following:

The only car that will be repaired is (being) repaired by that mechanic is mine
The only car (being) repaired by that mechanic is mine

Again, the latter will be interpreted, according to the context, as equivalent to one of the former. Thus:

The only car repaired by that mechanic
was repaired
will be repaired
next week . . .
now . . .
on Tuesdays . . .
before he left . . .

Another example:

Any coins *found on this site* must be handed to the police
("that are found . . .’ or, more precisely, ‘that may be found . . .’)

The antecedent head is identical with the deleted subject of the -ed postmodifying clause as it is with the -ing construction, but in this case the participle concerned is as firmly linked with the passive voice as that in the -ing construction is linked with the active. Hence, with intransitive verbs, there is no -ed postmodifier corresponding exactly to a relative clause:
13.19 Postmodification by prepositional phrases

This scholar, to be seen daily in the British Museum, has devoted his life to the history of science ('who can be seen . . .').

These clauses can be moved to initial position without change of meaning, but in that case they can no longer be expanded into finite relative clauses. Indeed, they have an implicit semantic range beyond that of a relative clause (cf 11.36). Thus the non-finite clause in this example:

The man, wearing such dark glasses, obviously could not see clearly could be a reduction of a relative clause 'who was wearing . . .' or of a causal clause 'because he was wearing . . .' or of a temporal clause such as 'whenever he wore . . .'.

Note
Cf the semantic versatility noted in finite non-restrictive relative clauses, 13.11.

13.18 Appositive postmodification

Appositive postmodification is fairly common by means of infinitive clauses. A restrictive example:

The appeal to join the movement was well received

which would correspond to the finite that people should join the movement.

A corresponding non-restrictive example:

This last appeal, to come and visit him, was never delivered

There are cases of non-finite postmodification where no corresponding finite apposition exists:

Any attempt to leave early is against regulations (*, . . . that one should leave early . . .)

He lost the ability to use his hands

In all these examples, the construction obliges us to infer the (often indefinite) subject of the infinitive clause from the context. But a subject may be explicitly introduced by a prepositional device:

The appeal for John to join . . .

Any attempt by John to leave . . .

Notes
On -ing clauses in appositive structures, see 13.20.

Postmodification by prepositional phrases
13.19 Relation to more explicit modifiers

In 13.5 we saw that the sentence 'The girl was standing in the corner' could yield the noun phrase, The girl in the corner. A prepositional phrase
is by far the commonest type of postmodification in English: it is three or four times more frequent than either finite or non-finite clausal postmodification. The full range of prepositions is involved:

| The road to Lincoln | Two years before the war |
| A tree by a stream  | A man from the electricity board |
| The house beyond the church | This book on grammar |

including the complex prepositions (6.4):

| Action in case of fire | Passengers on board the ship |

and including those having participial form:

| A delay pending further inquiry |

Among the prepositions less commonly used in postmodification we should mention like in the sense 'resembling': 'The man like John is over there'. But it is common and fully acceptable in the sense 'such as':

A man like John would never do that.

It is natural to relate such prepositional postmodifications to be sentences ('the man in the corner' ~ 'the man is in the corner'), though in some instances more seems to be ellipted than the verb be. For example, we presumably need to regard

The university as a political forum

as related to a somewhat fuller predication:

The university is (acting regarded) as a political forum.

Again, although there is no problem with

The present for John cost a great deal
(The present is for John)

we cannot interpret so straightforwardly

The man for the job is John (= the right man for the job...)

Again, it is not through be sentences that we must understand

The man with a red beard The girl with a funny hat

but rather through have sentences ('The man has a red beard'): cf 6.37.

13.21 Restrictive and non-restrictive

The of-genitive

It is with have sentences that we find the most obvious resemblance when

we turn to the commonest prepositional postmodification of all, the of-

phrase:

A man of courage ~ The man has courage

But, as we saw in 4.69 ff, many relationships find expression through the

of-genitive, and one that deserves brief consideration here is the appositive

relation: which in fact resembles a be sentence:

The pleasure of your company ~ Your company is a pleasure

Where the postmodification has an -ing clause, the subject may have to

be inferred from the context or it may be identified with a premodifier of the

head:

The hope of winning a prize (= X hoped that X would win a prize)

John's hope of winning a prize (= John hoped that he would...)

But a separate subject may be introduced:

John's hope of Mary's winning a prize (= John hoped that Mary

would...)

On Mary versus Mary's here, see 11.18. Where the postmodification has a
deverbal noun, a specified 'subject' must, of course, be genitive:

John's hope of Mary's arrival (= John hoped that Mary would

arrive)

13.21 Restrictive and non-restrictive

Prepositional phrases may thus be non-appositive or appositive, and in
either function, they can be restrictive or non-restrictive:

This book on grammar (non-appositive, restrictive)

This book, on grammar, (non-appositive, non-restrictive)

The issue of student grants (appositive, restrictive)

The issue of student grants, (appositive, non-restrictive)

But we must mention some limitations. The second example in each case
is rare and rather awkward: non-restrictive appositives would more usually
be without a preposition, as in

The issue, student grants

and would thus have the primary form described in 9.49 ff. On the other
hand, if the ambiguous noun phrase

The issue of student grants
had its non-appositive meaning (objective of: 'someone issued student grants'), non-restrictive function would be rare and unnatural, plainly suggesting an awkward afterthought.

13.22 Position and varied relationship
As with non-finite postmodifiers when non-restrictive, so with prepositional phrases, the non-restrictive function merges with adverbial expressions; compare

The children behind the fence jeered at the soldiers
which means 'Those children who were . . .'

1 he children behind the fence jeered at the soldiers
which may mean 'The children, who (by the way) were . . .' or, on the other hand, 'The children, now that they were (safely . . .)' cf.9.54. Note. It is rather this latter implication that becomes uppermost if the prepositional phrase is moved into initial position:

Behind the fence the children jeered at the soldiers
On the bus the children jeered at the soldiers

Again, the prepositional phrase in the following is poised between interpretation as non-restrictive postmodifier and as adverbial:

Money, in aid of the refugees, was collected from students and staff

In the former interpretation, the money collected was in aid of the refugees, whereas in the latter, the act of collecting money was in aid of the refugees, since in this case the adverbial modifies the whole predication just as it would in initial position:

In aid of the refugees, money was collected...

13.23 Deverbal noun heads
We should not, however, exaggerate the difference between the prepositional phrase as adverbial and the prepositional phrase as postmodifier. The second of these should rather be regarded as a special instance of the first, depending for its interpretation on our ability to relate it to a sentence in which it is adjunct. In the following, for instance,

(a) A quarrel broke out in the morning over pay

both the prepositional phrases are introduced as adjuncts. If we wish to refer again to the quarrel, these adjuncts may now become postmodifiers:

(b) The quarrel in the morning ruined their friendship
(c) The quarrel over pay was the reason for his resignation

The relation of postmodifier to adjunct may be even clearer if instead of (a) we take a sentence in which quarrel occurs as a verb:

(d) They quarrelled in the morning over pay
to which we also relate (b) and (c) but in this case through conversion of the verb (11.18) whereby (d) could become a non-finite clause as subject of sentences like (b) or (c):

Their quarrelling over pay was the reason for his resignation

The subject of this sentence is a clause rather than a noun phrase, as we can see from the fact that in such cases adjectival modification is often inadmissible. By contrast, a deverbal head (App I.13, I.16) will not permit premodifying adverbs:

The violent quarrel over pay *Their safe arriving in Cairo

*The violently quarrel over pay Their safe arrival in Cairo

Note
As well as distinguishing between the deverbal noun (eg: quarrel, arrival, suggestion, painting as count noun) and the corresponding verbal nouns in-ing, we need to recognize a complex gradience through which is traditionally called 'gerund' to the purely participial form in a finite verb phrase:

Some paintings of Brown's (le some paintings that Brown owns)
Brown's paintings of his daughter (le paintings owned by Brown, depicting his daughter but painted by someone else)
Brown's paintings of his daughter (le they depict his daughter and were painted by him)
The painting of Brown is as skilful as that of Gainsborough (le Brown's (a) technique of painting or (b) action of painting)
Brown's deft painting of his daughter is a delight to watch (le it is a delight to watch while Brown deftly paints his daughter)
Brown's deftly painting his daughter is a delight to watch (=4b) and [5] in meaning
I dislike Brown's painting his daughter (le I dislike either (a) the act or (b) the way Brown does it)
I dislike Brown painting his daughter (=7a)
I watched Brown painting his daughter (le: either I watched Brown as he painted or I watched the process of Brown's painting his daughter)
Brown deftly painting his daughter is a delight to watch (=4b) and [5]
Painting his daughter, Brown noticed that his hand was shaking (le while he was painting)
Brown painting his daughter that day, I decided to go for a walk (le since Brown was painting)
The man painting the girl is Brown (le who is painting)
The silently painting man is Brown (le who is silently painting)
He is painting his daughter
13.24
Minor types of postmodification
We come now to some relatively minor types of postmodification. These are (a) adverbial modification (cf. 5.28); (b) the postposed adjective (cf. 5.44); and (c) the postposed ‘mode’ qualifier. For example,
(a) *The road back* was dense with traffic
(b) *Something strange* happened last night
(c) *Lobster Newburg* is difficult to prepare

In (a) we recognize some such sentence as ‘The road which leads back (to London)’, from which all but the subject and an important adjunct have been dropped. Similarly ‘The way (which leads) in (to the auditorium)’, ‘The people (who are sitting) behind’.

In (b), we have in fact two subtypes. The first has been illustrated. The indefinite pronouns such as anybody, someone can be followed but not preceded by adjectival modification. The pronouns concerned are the any-, some-, no- series (4.91 ff.) plus one or two others (cf. what else, when next, etc.). But we are not free to postpose with indefinites all modifying items that can be preposed with ordinary noun heads:

A party official is waiting but not *Somebody party is waiting*

Even adjectives need generally to be ‘permanent’ and hence eligible equally for attributive and predicative use (13.4; cf. 5.13 ff.); thus

Somebody timid rather than *Somebody afraid*

The other subtype in (b) consists chiefly of the sprinkling of noun plus adjectival phrases (modelled on French) like blood royal, heir apparent. These are of little importance in themselves, being infrequently used (though our ability to form names like Hotel Majestic suggests that they are more than mere fossils) and it is likely that the native speaker feels them to be very similar to compound nouns. Nevertheless, beside this subtype, there is a similar but much more general phenomenon. When a head is non-restrictively modified by a coordinated string of adjectives, it is common to postpose them:

A man, timid and hesitant, approached the official

though the potential mobility of the string allows it to be detached from the noun phrase altogether (cf 13.17). Even a restrictively modifying adjective can be postposed if it is itself modified (by an adjunct, not by the intensifier very: cf. 5.5):

A man always timid is unfit for this task (cf. *A man very timid*)

This is particularly common where the modification is of a ‘temporary’

nature (13.4). Thus beside *The finest available car*, we have *The finest car (currently) available*.

With (c), we again encounter a French model: *Lobster Newburg*. Though virtually confined to cuisine, it is moderately productive within these limits, perhaps especially in AmE. In BrE one finds *veal par-îka* and many others, but there is some resistance to this type of postposition with other than French lexical items, as in *pâté maison, zole bonne femme*.

Though technically a prepositional phrase phenomenon, expressions involving *à la* clearly belong here. It appears in culinary formations like *chicken à la king*, and also (informally or facetiously) to designate style:

Another play *à la Osborne* has appeared, though I forget who wrote it

13.25
Multiple modification

(a) A head may have more than one postmodification. Thus

The girl in the corner and The girl talking to John
can be brought together as

The girl in the corner (and) talking to John

Without conjunction, there would usually be a hierarchy:

{(The girl (in the corner)) talking to John}

(b) A modification may be applicable to more than one head. Thus

The girl in the corner and The boy in the corner
can be brought together by multiple-head rules which permit the determiner to apply to both heads (cf. 9.37):

The girl and boy in the corner

By bringing (a) and (b) together, we can produce complexes such as:

The girl and boy in the corner (and) talking to John

(c) The head of a modifying phrase may itself be modified; thus

The girl in the corner and The corner nearest the door

may be brought together as

The girl in the corner nearest the door

By bringing (a), (b), and (c) together, we form

The girl and boy in the corner nearest the door talking to John
though many fastidious users of English would prefer to end with a relative clause here (‘... who are talking to John’), no doubt in response to an instinct that prompts the introduction of explicitness at a point which is relatively distant from the head.

13.26 Ambiguity and constraints on multiple modification

Frequently, careful ordering of constituents in a noun phrase is essential to communicate all (and only) one’s intention. To take an obvious example, the following pair differ in meaning and are not mere stylistic variants:

The man in black talking to the girl
The man talking to the girl in black

One of the chief reasons for preferring the of-phrase to the -s genitive is to avoid discontinuity (with unwanted humour); thus

The ears of the man in the deckchair
and not

*The man’s ears in the deckchair

(But cf. with group genitive, *The man in the deckchair’s ears: 4.74.)

A special type of multiple modification that requires careful ordering occurs when the modifying clause becomes itself embedded in a clause. Consider the following series:

John will write a poem for you
Tom hopes (that) John will write a poem for you
I will read the poem (which) Tom hopes (that) John will write for you

In this last sentence, the relative pronoun (which) is object in the italicized relative clause. When, however, a relative pronoun is subject, the conjunction that must be omitted

A poem will be written for you
Tom hopes (that) a poem will be written for you
I will read the poem (which) Tom hopes (that) will be written for you

Note

Even with simpler examples and the most careful ordering, we may find clarity and acceptable grammar difficult to attain in multiple modification. Beginning with

He liked the smiles of delight on all the faces
a noun phrase based on this sentence and having smiles as its head may be ambiguous in one ordering:

The smiles of delight on all the faces that he liked

(was it the smiles or the faces that he liked?), and grammatically awkward in another.

13.27 Types of premodifying item

Holding constant a lexical frame (his ... cottage) and non-restrictive function, we have the following range of premodifying items:

(a) ADJECTIVE
    I visited his delightful cottage
    (His cottage is delightful)

(b) PARTICIPLE
    I visited his crumbling cottage
    (His cottage is crumbling)
    I visited his completed cottage
    (His cottage has been completed)

(c) -S GENITIVE
    I visited his fisherman’s cottage
    (The cottage belonged to a fisherman)

It should be noticed that if we had used a more normal genitive example (his uncle’s cottage) we would have changed the relationship of his.

(d) NOUN
    I visited his country cottage
    (His cottage is in the country)

(e) ADVERBAL
    I visited his far-away cottage
    (His cottage is far away)

(f) SENTENCE
    (1) I visited his pop-down-for-the-weekend cottage
    (cf. His cottage is ideal to pop down to for the weekend)

This type is largely playful and familiar. Somewhat more generally used are noun phrases which can be interpreted either as having a sentence as premodifying or as being object (usually of know) in an embedded noun clause:

He asked I don’t know how many people

13.28 Premodification by adjectives

A premodifying adjective, especially when it is the first item after the determiner, can itself be premodified in the same way as it can in predicative position (5.23):

His really quite unbelievably delightful cottage

Some intensifiers tend however to be avoided with premodifying adjec-
tives. Thus the predicative phrase in *His cottage which is so beautiful would seem a little affected in premodification: *His so beautiful cottage.
With indefinite determiners, so would be replaced by such (cf 5.27):

A cottage which is so beautiful ~ Such a beautiful cottage

Or else a plus adjective would be placed before the determiner: *So beautiful a cottage.

There is resistance also to transferring clause negation to a structure of premodification, and this is possible only in limited circumstances (usually not plus intensifier or negative affix):

The dinner was not very pleasant ~ The not very pleasant dinner

Note
C.5 adjectives that cannot be used in premodification, see 5.18. By contrast, there are premodifying adjectives that cannot be related to clauses with a corresponding predicative usage: cf 5.13 ff.

Premodification by participles
-ing participles
13.29
Everything here depends on the potentiality of the participle to indicate a permanent or characteristic feature. To a lesser extent graduality (especially as indicated through intensification by very) is involved.

She has a very interesting mind
shows interesting as fully adjectival (5.46 f) despite the direct relation to the verb interest:

Her mind interests me very much

But an item can be a premodifier and yet disallow very:

A roaring bull (*very roaring)

And the converse can be true:

The man was very reassuring

?He was a reassuring man

This last example will illustrate the crucial significance of the 'permanence' characteristic; such participles can freely premodify nouns such as look, smile:

He greeted me with a very reassuring expression

13.31 -ed participles

The man himself cannot have shock or surprise attributed permanently to him, but a particular look can of course be permanently associated with such a value. So too we may speak of a smiling face rather than of a smiling person. It is thus necessary to realize that we are not here concerned with particular participles so much as with their contextual meaning. A wandering minstrel is one habitually given to wandering, but if we saw a man wandering down the street, we could not say

*Who is the wandering man?

Again, someone who told good stories could be a (very) entertaining person but one could not say this of someone who happened, at the moment of speaking, to be entertaining his friends with a good story.

13.30
As we have noted before (13.4), the indefinite article favours the habitual or permanent, the definite article the specific or temporary. Thus

The approaching train is from Liverpool

is strange (especially in BrE) but not

He was frightened by an approaching train

where we are concerned perhaps with what is characteristic in 'approaching trains'. Similarly, *The barking dog is my neighbour's', compared with the quite normal, I was wakened by a barking dog. On the other hand, after an indefinite head has been postmodified by an -ing clause, the -ing participle can premodify the same head plus definite article:

A proposal offending many members . . . → The offending proposal . . .

In addition, the definite article may be used generically (4.16) and hence evoke the same generality and permanence as the indefinite.

The beginning student should be given every encouragement

-ed participles
13.31
Much of what has been said of -ing participles applies to -ed participles also, but there are additional complications. In the first place, the -ed participle can be active or passive, but as with postmodification (13.15) the active is rarely used in premodification. Contrast

The immigrant who has arrived with *The arrived immigrant

The vanished treasure ('The treasure which has vanished') and *A retired
teacher are exceptional, but exceptions are somewhat more general when an active participle is adverbially modified:

The newly-arrived immigrant
Our recently-departed friend

within the passive we must distinguish the stative from the actional or true passive (12.15 Note b); a stative example:

Some complicated machinery — The machinery is complicated
(*The machinery was complicated by the designer)

Here belong also born and some uses of hidden, married, troubled, darkened, etc., but in premodification they must either have ‘permanent’ reference or be adverbially modified: a married man, a newly-born child, a carefully-hidden spy. The last example illustrates a noteworthy general contrast between -ing and -ed participles. Beside the similarity in post-modification

A spy, carefully hidden in the bushes,
A spy, carefully hiding in the bushes,
the latter unlike the former resists premodification

*A carefully-hiding spy

13.32

Most -ed participles are of the agential type and naturally only a few will easily admit the permanent reference that will permit premodifying use. We may contrast

The wanted man was last seen in Cambridge
(The man goes on being wanted by the police)
*The found purse was returned to its owner
(The purse was found at a particular moment)

But a lost purse is grammatical, because although a purse is no longer regarded as ‘lost’ after it has been retrieved, a purse will be regarded as ‘lost’ throughout the period of its disappearance. So too: the defeated army, a broken vase, a damaged car, its relieved owner. But not: *a sold car, *the mentioned article, *a dull house, *a described man.

But there are exceptions which suggest that the semantic and aspectual factors are more complicated than here described. For example, although a sum of money can go on being needed, one does not normally say *the needed money. Modified by adverbs, of course, the starred examples become acceptable: a recently-sold car, etc.

Finally, modifiers in -ed may be directly denominal and not participles at all (see App I.21): the vaulted roof, a fluted pillar, a wooded hillsise. But

13.34 Premodification by nouns

constraints occur (perhaps dictated merely by semantic redundancy), such that there is no *a powered engine, *a haired girl, *a legged man, though we have a diesel-powered engine, a red-haired girl, a long-legged man.

13.33 Premodification by genitives

A noun phrase like a fisherman's cottage is ambiguous: the cottage belongs to a fisherman or belonged to a fisherman (or resembles the cottage of a fisherman). As distinct from a delightful cottage or a completed cottage, the determiner need not refer forward to the head: more usually, it refers only to the genitive. If the latter, then any intermediate modifiers between the determiner and the genitive must also refer only to the genitive. Thus

These nasty women's clothing

where these must predetermine the plural women's and the phrase must mean 'the clothing of these women' and not 'the nasty clothing of these women' which would require the order These women's nasty clothing. If 'the former ('the clothing of . . . ') then an intermediate modifier will be interpreted as referring to the head. Thus

This nasty women's clothing

would mean 'this nasty clothing belonging to (or designed for) women'. Ambiguous instances are however common: an old man's bicycle (contrast: a man's old bicycle) could mean 'the bicycle belonging to an old man' or 'an old bicycle designed for a man' (or even 'a bicycle designed for an old man').

Note
On genitive modification in general, see 4.67 ff.

13.34 Premodification by nouns

Noun premodifiers are often so closely associated with the head as to be regarded as compounded with it (App I.34 ff.). In many cases, they appear to be in a reduced-explicitness relation with prepositional postmodifiers:

The question of partition — The partition question
The door of the cupboard — The cupboard 'door
A village in Sussex — A Sussex 'village

But not all noun premodifiers have prepositional phrase analogues:

Bernard Miles was both actor and producer — The actor-producer
13.35
Attention must be drawn to two important features in noun premodifications.

(1) Plural nouns usually become singular (cf. 4.33 Note b), even those that otherwise have no singular form:

The leg of the trousers ~ The trouser leg

But while singularization is normal it is by no means universal (cf: arms race), especially with noun premodification that is not hardening into a fixed phrase or compound: The committee on promotions ~ The promotions committee.

(2) According to the relationship between the two nouns, the accent will fall on the premodifier or the head; for example, An iron rod but A lover story. The conditions under which the latter stress pattern is adopted are by no means wholly clear but they are also connected with the conventionalizing of a sequence in the direction of compounding.

A notable constraint against making postmodifying phrases into premodifying nouns is the relative impermanence of the modification in question. Thus while The table in the corner will readily yield The corner table, we cannot do the same with

The girl in the corner (spoke to me) ~ *The corner girl . . .

We must insist again that this is not a property of the lexical item (in this instance, corner) but of the semantic relation. Premodification confers relative permanence which befits the assignment to a corner of a table or even a waiters, but not a girl as such.

Multiple premodification
13.36
With single head
The three types of multiple modification specified in 13.27 apply to premodification also. More than one premodifier may be related to a single head, with no grammatical limit on the number:

His brilliant book ~ His last book ~ His (. . .) book ~ His last brilliant (. . .) book

This is however misleading in giving the impression that the multiple modifiers constitute an unordered and coordinate string. It usually follows a recursive process:

His book ~ His brilliant book ~ His [last (brilliant book)]

13.38 With modified modifier
We would here mean that of several brilliant books we are speaking only of his last one; by contrast

His book ~ His last book ~ His [brilliant (last book)]

indicates that his last book was brilliant without commitment to whether any of his others were. In some instances, however, we do indeed have multiple modifications in which no priority among modifiers need be assumed; to these we may give separate prosodic emphasis or introduce commas in writing:

His last brilliant book

or formally coordinate them. Thus there would be little difference between

His forceful, lucid remarks and His lucid (and) forceful remarks

When such coordinated modifiers relate to properties that are normally thought to conflict, the coordinator will probably not be and:

His handsome but dirty face ~ His dirty but handsome face

13.37 With multiple head
Modification may apply to more than one head (cf 9.57):

The new table ~ The new table and chairs

The multiple head thus produced can now be subject to recursive or coordinate modification:

The new table and chairs ~ {The beautiful new table and chairs

If we coordinated learned papers and books as in (He wrote) learned papers and books, we would suggest that learned applies to both papers and books. To clarify, we can either re-order (books and learned papers) or introduce separate determiners (some learned papers and some books).

13.38 With modified modifier
We have already seen two types of modification with modified modifier:

His really quite unbelievably delightful cottage (13.28)
These nasty women's clothing (13.33)

In a third type, the noun premodifier can be itself premodified by either
adjective or a noun and, if the latter, this can in turn be similarly pre-modified:

The office furniture → [The small office furniture
   The tax office furniture
   The property tax office furniture →
   The house property tax office furniture

It should be noted, however, that if we were to introduce an adjective in this last noun phrase, already clumsy and improbable, (i) it would have to come immediately after the determiner, and (ii) it would normally be interpreted as relating directly to the head furniture rather than to house, the only other possibility:

The (pleasant [〈house property tax〉 office] furniture)

This is not to say however that obscurity cannot exist or that noun pre-modifiers can modify only the next following noun. Consider A new giant size cardboard detergent carton, where size does not premodify cardboard and cardboard does not premodifying detergent but where the linear structure is rather:

A 〈new (giant size) [cardboard (detergent carton)]〉

13.39
Other complexities in premodification

A friendship between a boy and girl becomes A boy and girl friendship. A committee dealing with appointments and promotions can readily be described as The appointments and promotions committee, while one whose business is the allocation of finance can be The allocation of finance committee.

A noun phrase in which there is noun premodification can be given the denominal affix which puts it into the 'consisting of' class of adjectives (5.20) while retaining the noun premodifier; hence, from party politics we have a party political broadcast.

Similarly, a noun phrase having a denominal adjective may itself take a denominal affix to become a premodifier in a noun phrase. For example, beside cerebrospinalgia (= 'palsy' of the cerebrum), we have cerebral palsied children which has the structure (cf. 13.32, App I.21):

{[(cerebral palsy)ed] children} and not *{cerebral (palsied children)}

Note

There are analogies in the group genitive: 4.74. Coordination gives rise to numerous difficulties in premodification. Beside the relatively explicit children with impaired speech, we have the premodified form speech-impaired children. But since speech and hearing are so often jointly impaired, we are involved in the need to have a corresponding premodification, speech(·) and hearing(·) impaired children, clear enough in spoken English but possibly requiring clumsy hyphenation to make it clear in writing.

13.41 Classes of adjectives

Relative sequence of premodifiers

DENOMINAL AND NOMINAL

The item that must come next before the head is the type of denominal adjective often meaning 'consisting of', 'involving', or 'relating to', and this can be preceded by a wide range of premodifying items:

the
   {extravagant}
   pleasant
      only
   London

social life
   a
   city
   mere
   United States

problem

Next closest to the head is the noun premodifier, already exemplified with London and city in the foregoing examples. When two nouns premodify, one which corresponds to the head as object to verb will follow one relating to material or agency:

a
   {detergent}
   container
   cardboard
   container
   detergent
   carton

my
   {cig·aret·te}
   lighter
   my
   gas
   cigarette lighter
   not *my cigarette gas lighter

13.41 CLASSES OF ADJECTIVES

Next before a noun modifier, the most important class of items is the adjective of provenance or style:

a
   Russian trade delegation
   Gothic church architecture

and preceding this type is the participle:

a
   carved
   Gothic doorway
   some
   interlocking Chinese designs

Preceding the participle, we have adjectives of colour:

a
   black
dividing line
   green
carved idol

These are preceded by adjectives of age, together with the premodifiers and postmodifiers that these and other freely gradable adjectives may have:

an
   old
clothing
   an
   really
everly
   elderly
   trained nurse

a
   very
   young
   physics student
   a
   large
   enough
   lecture room

Next comes the large class that we may call 'general', except that between 'general' and colour (and usually all other modifiers to the right) comes the diminutive unstressed use of little. Thus, not *an old little blue ornament, but:
There are more striking examples:

I had a nice glass of beer but in an ugly glass

This is not as contradictory as it may seem, since it is only in the second noun phrase that glass is premodified by an adjective; in the first, it is better to regard glass of beer as a complex unit modified as a whole but with glass being less a concrete noun than a unit of measure. So too with a weak cup of tea, and phrases of the form kind/sort of N which take premodifiers plainly related to N rather than sort, both in semantics and in concord:

A big awkward sort of carton
These big awkward kind of cartons

Discontinuous modification more aptly applies to examples like the following (cf 5.5):

Comparable facilities to ours
Different production figures from those given earlier

The prepositional phrases here do not directly relate to the head (as they do in roads to London, people from the village) but to the premodifying adjective: ‘facilities comparable to ours’, ‘figures different from those’. Compare also The tall man that I saw with The first man that I saw (‘The man that I saw first’); ‘An attractive scheme financially’ (‘A scheme which is financially attractive’); cf 5.23 Note a.

Most discontinuities, however, are brought about by interpolating a parenthesis or the finite verb of the sentence (where the noun phrase is subject) between the head and the postmodifier; and the usual motive is to correct a structural imbalance (cf 14.30) as in ‘The story is told that he was once a boxer’, or to achieve a more immediate clarity as in:

The woman is by the door, who sold me the tickets and told me the play doesn’t begin till three

Discontinuous modification

It is not uncommon for the noun phrase to be interrupted by other items of clause structure. Note for instance the time adjunct between the head and postmodifier in the following:

You’ll meet a man tomorrow carrying a heavy parcel
FOURTEEN
FOCUS, THEME, AND EMPHASIS

14.1
In previous chapters, particularly Chapter 7, we have seen how English sentences are built up from various phrase types which serve a range of
constructual functions within the grammar (subject, verb, adverbial,
etc). We have also seen (7.9 ff) how the elements which have these functions have also a different kind of function (a participant role) describable
in terms such as 'agentive', 'recipient', 'attribute'. In this final chapter,
we come to a third way in which one may view these parts of the sentence:
as items which can be manipulated within the structure of sentences for
different kinds of prominence. There are three kinds to be considered:
focus, theme, and emotive emphasis. Studying these aspects of linguistic
structure makes one aware of language as a sequentially organized com-
communication system, in which judicious ordering and placing of emphasis
may be important for the proper understanding of the message and its
implications. For illustrative purposes, we generally use independent
clauses which constitute simple sentences.

Information focus
14.2
End-focus and contrastive focus
We start by considering how the English language organizes a spoken
message into units of information, as signalled by intonation (cf App
II.7 ff). Each tone unit represents a unit of information, and the place
where the nucleus falls is the focus of information. As the clause is the
unit of grammar that most closely corresponds to the tone unit, the best
way to consider the positioning of the information focus is to relate it to
clause structure, taking examples in which clause and tone unit corre-
respond in extent.
The neutral position of focus is what we may call END- FOCUS, that is
(generally speaking) chief prominence on the last open-class item or
proper noun in the clause (App II.4):

14.3 Contrastive focus on words and syllables
Dylan Thomas was born in swansea
Special or contrastive focus, however, may be placed at earlier points,
and so may fall on any of the non-final elements of the clause. For
example:
Focus at S:
[Who was born in Swansea?] Dylan thomas was (born in
Swansea)
Focus at V:
[Dylan Thomas was married in Swansea, wasn't he?] no,
he was born in Swansea
Focus at O₂:
[I hear you're painting the bathroom blue.] no, I'm painting the
living-room blue
Focus at A:
[Have you ever driven a cadillac?] yes, I've driven one
Contrastive focus can also be signalled by placing the nucleus on a final
item which normally would not have end-focus; for instance, on closed-
system items like pronouns and prepositions:
Who are you working for? (not with)
He was speaking to mǐ (not to you)

Note
The principle that focus normally comes at the end of a tone unit explains why a
parenthesis (which is normally bordered by tone-unit boundaries) can be used rhetorically
to throw emphasis on a word immediately preceding it:
And this, [in mǐ, why I refused]

14.3 Contrastive focus on words and syllables
The above examples show that whichever element is contrastive receives
nuclear prominence on its last fully stressed syllable. Intonation can also
focus more narrowly on a particular word of a phrase, rather than phrase
of a clause:
DyLan Thomas was born in 1914 (not Edward Thomas)
I put them on the bed (not under it)
or even on part of a word, with a contrastive shift from normal word-
stress:
I'm afraid that bureaucracy can be worse than autocracy
Normally word-stress, and hence nuclear prominence, would fall on the
second syllable: bukreacry and autocracy.
14.4 Given and new information
Focus is related to the difference between **given** and **new** information; that is to say, between information already supplied by context and information which has not been prepared for in this way. The focus, signalled by the nucleus, indicates where the new information lies, and the unit carrying such information has the nucleus in final position. Hence if the nucleus falls on the last stressed syllable of the clause (according to the end focus principle), the new information could, for example, be the entire clause, or the predication of the clause, or the last element of the clause. In the following sentence, we mark three possible extents of new information in the same sentence; each of the three questions indicates how much is already assumed by speaker and audience before the reply is made:

**Whole clause is new** (neutral information focus):

---

**NEW**

[What’s on today?] We’re going to the races

Predication is new:

---

**NEW**

[What are we doing today?] We’re going to the races

Final adverbial is new:

---

**NEW**

[Where are we going today?] We’re going to the races

By contrast, where the new item comes earlier in the clause, the prosodic form is distinctive:

---

**NEW**

[Who’s going to the races?] We are going to the races

14.5 Variation in the scope of new information
Different interpretations are also possible when the nucleus occupies the terminal part of a complex non-final element. Compare:

---

**NEW**

William Wordsworth is my favourite English poet

(not John Keats)

---

William Wordsworth is my favourite English poet

(not William Shakespeare)

If the nucleus comes on the final word, either the whole phrase or only the final part of it may be ‘new’. ‘New’, therefore, may be varied in scope from a whole clause to a single word, or even to a single syllable.

---

**NEW**

Is your father at home? (Contrast Is your father out?)

---

[There may be more than one contrast. 1 element in the same clause. In the following there are three:]

ο Dylan Thomas was born in nineteen-forty-seven in Swansea, but

ον Thomas was born in eighteen-eighty-nine in Anglesey

14.6 Focus on the operator
One type of focus so far ignored is focus on the operator (cf 14.35), which often has the function of signalling contrast between positive and negative meaning. Where the verb phrase is without an item that can function as operator, do is introduced:

---

[A: I thought John worked hard.]  B: But he did work hard.
[A: Why haven’t you had a bath?]  B: I haven’t had a bath.
[A: Look for your shoes.]  B: I am looking for them.
[A: Surely he can’t drive a bus?]  B: No, but he can drive a car.

When the operator is positive, the meaning is ‘Yes in contrast to No’; when the operator is negative, the meaning is the opposite contrast:

---

So you haven’t lost, after all! (‘I thought you had’)

The operator emphasizes positivity or negativity when it bears the focus (as it normally does) in elliptical replies (10.29):

---

[A: Have you seen my books?]  B: No, I haven’t.
[A: Does this bell work?]  B: Yes, it does.
With a rise or fall-rise intonation, focus on past and future auxiliaries often puts contrastive emphasis on the tense rather than on the positive or negative polarity:

He owns — or do own — a Rolls Royce.
We’ve sold out, but we will be getting some.

Similarly, the nucleus on auxiliaries such as may and ought to often signals a contrast between the supposed real state of affairs, and a state of affairs thought desirable or likely:

The opinion polls may be right (‘but I suspect they’re not’)
My purse ought to be here (‘but it probably isn’t’)

14.7 Ellipsis and substitution
We have referred to the use of the operator in elliptical replies (14.6). In general, an important reason for ellipsis is to focus attention on new information by avoiding repetition of given information (9.1 ff, 9.21 ff, 10.44 ff):

I haven’t spoken to your brother yet, but I will later today
(= will speak to your brother later today)
A: When are you seeing her? B: Tomorrow.
(= I’m seeing her tomorrow)

A similar effect is achieved by substituting pro-forms for given information (10.25 ff):

Give Joan the red cup and take the blue one for yourself
(the blue one = the blue cup)
Susan won a prize last year and will do so again this year
(will do so = will win a prize)

Ellipsis and substitution are useful in unambiguously marking the focus of information in written English, where intonation is absent (cf. 14.15).

Voice and reversibility
14.8 Voice, end-focus, and end-weight
Three factors contribute to the presentation of the content of a clause in one particular order rather than another. One is the tendency to place new information towards the end of the clause — the principle of end-focus (14.2). Another is the tendency to reserve the final position for the more complex parts of a clause or sentence — the principle of end-weight.

14.10 Theme and inversion
Since it is natural to express given information briefly (e.g., by pronoun substitution), these two principles work together, rather than against one another.

A third factor is the limitation of possible clause structures to those outlined in 7.2, with their associated sets of participant roles (7.9 ff). These restrictions determine, for example, that an ‘agentive’ role cannot be expressed by an object or complement, but only by the subject, or by the agent of a passive clause. From this, one sees the importance of the passive voice as a means of reversing the normal order of ‘agentive’ and ‘affected’ elements, and thus of adjusting clause structure to end-focus and end-weight.

A: Who makes these chairs? B: They’re made by ERCOL.

A finite clause as subject is readily avoided by switching from the active to the passive voice, in accordance with the principle of end-weight:

(That he was prepared to go to such lengths astounded me)
I was astounded that he was prepared to go to such lengths.

14.9 Converse
Quite apart from the grammatical contrast between active and passive, the language possesses other grammatical or lexical means for reversing the order of roles:

{An uncle, three cousins, and two brothers benefited from the will}
{The will benefited an uncle, three cousins, and two brothers}
{An unidentified blue liquid was in the bottle}
{The bottle contained an unidentified blue liquid}
{A red sports car was behind the bus}
{The bus was in front of a red sports car}

The items or sequences in italics are converses; i.e., they express the same meaning, but with a reversal of the order of participants. The second sentence in each case is generally preferable, since the element with the definite determiner, containing given information (4.20), would normally not take terminal focus.

Theme and inversion
14.10 Theme
The initial unit of a clause (with the exception of initial adverbials referred to in 14.11 Note) may be called its THEME. Apart from the last stressed element of clause structure (that which most naturally bears
information focus), the theme is the most important part of a clause from the point of view of its presentation of a message in sequence.

The expected or 'unmarked' theme of a main clause is

1. Subject in a statement: He bought a new house
2. Operator in a yes-no question: Did he buy a new house?
3. Wh-element in a wh-question: Which house did he buy?
4. Main verb in a command: Buy a new house

The theme may be characterized as the communicative point of departure for the rest of the clause.

The two communicatively prominent parts of the clause, the theme and the focus, are typically distinct: one is the point of initiation, and the other the point of completion. The theme of a clause is 'given information' more often than any other part of it. Yet the two can coincide, for instance, when the focus falls on the subject:

[Who gave you that magazine?] n.t. gave it to me

14.11
Thematic fronting or 'marked theme'

One may take as theme of a clause some element not usually assuming that function. Elements placed initially for thematic prominence vary in style and effect.

In informal speech, it is quite common for an element to be fronted with nuclear stress, and thus to be 'marked' (or given special emphasis) both thematically and informationally:

C₂ as theme:

job his name is

C₃ as theme:

Relaxation you call it!

O₄ as theme:

Really good cocktails they made at that hotel.

It is as if the thematic element is the first thing that strikes the speaker, and the rest is added as an afterthought. The possible insertion of a comma suggests that the non-thematic part is almost a tag (14.38) in status: Joe, his name is.

A second type of marked theme is found in rhetorical style, and helps to point a parallelism between two units in the clause and two related units in some neighbouring clause of contrasting meaning:

14.12 Inversion

Prepositional complement as theme:

His face I'm not fond of (but his character I despise)

O₄ as theme:

... but his character I despise

C₄ as theme:

richt may be (but that doesn't mean I'm happy)

Predication as theme:

(I've promised to do it,) so I do it I shall

A as theme:

In London I was alone, and in London I'll die

Such clauses often have double information focus, one nucleus coming on the theme, and the other on a later (usually terminal) part of the clause.

One may thirdly distinguish examples characteristic of written English, and in which the marked theme seems to have the negative function of ensuring that end-focus falls on the most important part of the message:

Most of these problems a computer could take in its stride

To this list may be added ten further items of importance

Note
Some adverbials (mainly disjuncts and conjuncts) appear characteristically in initial position, and so should not be accorded thematic status at all. However, certain adverbials, especially those which would otherwise immediately follow an intransitive or intensive verb, may be treated as 'marked theme' when placed initially. Furthermore, adjustment of end-focus may also involve the initial placing of adverbials.

Inversion

14.12

SUBJECT-VERB INVERSION

Here comes the bus (A V S)

There, at the summit, stood the castle in its medieval splendour (A A V S A)

In went the sun and down came the rain (A V S, A V S)

Equally inexplicable was his behaviour towards his son (C V S)

'Go away!,' said one child; 'And don't come back!' growled another. (... V S, ... V S) (cf 11.52)

This type of inversion (cf 8.28) is mainly found in clauses of Types SVA and SVC where a normally post-verbal element is so tied to the verb that
when that element is ‘marked’ theme the verb is ‘attracted’ into pre-subject position. The last example illustrates a different type of inversion, with ‘verbs of saying.

Note
Adverbial there in the second example is stressed, and so is distinguished from the unstressed existential there (14.19 ff), which can also appear in preverbal position.

14.13
SUBJECT-OPERATOR INVERSION

So absurd was his manner that everyone stared at him
(11.44 Note) [1]
Far be it from me to condemn him (7.64) [2]
Under no circumstances must the switch be left on (7.37) [3]
Hardly had I left before the quarrelling started (7.39) [4]
I worked and so did the others (10.29 ff) [5]
Well may he complain of the misfortunes that have befallen him (formal) [6]
Throwing the hammer is champion William Anderson, a shepherd from the Highlands of Scotland [7]

The inversion of [6] is decidedly literary in tone, and unlike the preceding examples, is optional. Normal subject-verb order, with the adverb following the auxiliary, would usually be preferred. Example [7] is a journalistic type of inversion, in which the predication is fronted in order to bring end-focus on a complex subject.

14.14
Theme in subordinate clauses

In subordinate clauses, the usual items occurring as theme are subordinators, wh-elements, and the relative pronoun that. Other items occur as theme only in idiomatic or literary constructions of minor importance:

Should you change your plan ... (11.25 Note d) [8]
Keen though I am ... (11.26 Note) [9]

The first example is a conditional clause, and the others are conditional-concessive clauses.

Cleft and pseudo-cleft sentences

14.15
CLEFT SENTENCES

A special construction which gives both thematic and focal prominence to a particular element of the clause is the cleft sentence, so called because it divides a single clause into two separate sections, each with its own verb.

Most cleft sentence statements begin with the pronoun it followed by the verb be, which in turn is followed by the element on which the focus falls. From a single clause such as John wore his best suit to the dance last night, it is possible to derive four cleft sentences, each highlighting a particular element of the clause:

S as focus:
It was John who/that wore his best suit to the dance last night

O₄ as focus:
It was his best suit (that) John wore to the dance last night

A₃ as focus:
It was last night (that) John wore his best suit to the dance

A₄ as focus:
It was to the dance that John wore his best suit last night

The cleft sentence unambiguously marks the focus of information in written English, where intonation is absent. The highlighted element has the full implication of contrastive focus: the rest of the clause is taken as given, and a contrast is inferred with other items which might have filled the focal position in the sentence. Thus each of the above sentences has an implied negative, which can be made explicit, as in the following examples:

It wasn’t Jim, but John, who/that...
It wasn’t to the theatre, but (to) the dance...

Apart from S, O₄, and A, the two less common clause elements O₃ and C₃ can marginally act as the focal element of a cleft sentence:

O₃ as focus:

It was John (that) he gave the book
(but It was John (that) he gave the book to, or It was to John (that) he gave the book, with focus on John as prepositional complement, is more likely)

C₃ as focus:

It’s dark green that we’ve painted the kitchen

V does not occur at all as focus, but the restriction is sometimes circumvented by using the verb in a non-finite form and substituting do for it in the second part of the sentence:

It’s teaching that he does for a living
Note The introductory part of a cleft sentence is largely restricted to It is or It was though other forms of be occur: It must have been his brother that you saw

14.16 THE ‘RELATIVE CLAUSE’ IN CLEFT SENTENCES The final part of the clause, after the focal element, is obviously close in structure to a restrictive relative clause: pronouns used in relative clauses (who, that, zero pronoun) are also used to introduce cleft sentences, and they can be fronted, even from a position in a prepositional phrase:

It’s the girl that I was complaining about (not the boy)

There are differences, however, from relative clauses, in that the wh-forms are rare in comparison with that and zero. Characteristic intensification is also different:

It was the dog I gave the water to (dog is focus in cleft sentence)
It was the dog I gave the water to (dog is head of postmodified noun phrase)

A further difference is that the focal element in cleft sentences may be an adverbial:

It was because he was ill (that) we decided to return
It was in September (that) I first noticed it

A wh-pronoun cannot be used at all in cleft sentences where the focal element is an adverbial.

Note
[a] The cleft sentence structure can be used in questions, exclamations, and subordinate clauses:
Was it for this that we suffered and toiled?
Who was it who interviewed you?
What a glorious bonfire it was you made!
He told me that it was because he was ill that they decided to return

[b] The focusing function of the cleft sentence may be compared with that of the additive and restrictive adverbs too, only, etc (8.8 ff).

14.17 PSEUDO-CLEFT SENTENCES
Like the cleft sentence proper, the pseudo-cleft sentence makes explicit the division between given and new parts of the communication. It is an SVC sentence with a wh-relative nominal clause as subject or complement. The following are virtually synonymous:

14.18 Sentences of the pattern She’s a pleasure to teach

It’s a good rest that you need most
A good rest is what you need most

The pseudo-cleft sentence occurs more often, however, with the wh-clause as subject:

What you need most is a good rest

And it is less restricted than the cleft sentence in that, through use of do as pro-form (10.29), it permits marked focus to fall on the verb or predicative:

What he’s done is (to) spoil the whole thing
What John did to his suit was (to) ruin it

The complement or ‘focus’ of these sentences is normally in the form of an infinitival clause (with or without to).

Progressive or perfective aspect in the original sentence is regularly represented in the wh-clause of the pseudo-cleft sentence. With the progressive, the aspect is equally reflected in the non-finite clause and this is quite often the case also with the perfective:

They are ruining the economy
→ What they are doing is ruining the economy
They have ruined the economy,
→ What they have done is ruined the economy

In other respects, the pseudo-cleft sentence is more limited than the cleft sentence. Only with what-clauses does it freely commute with the cleft sentence construction. Clauses with who, where, and when are sometimes acceptable, but mainly when the wh-clause is subject-complement:

The police chief was who I meant
Here is where the accident took place

But whose, why, and how, for example, do not easily enter into the pseudo-cleft sentence construction.

14.18 Sentences of the pattern She’s a pleasure to teach

There is a type of construction that gives the emphasis of thematic position in the main clause to the object or prepositional object of a nominal clause. The item so fronted replaces anticipatory it as subject of the main clause (cf 14.24 ff):

To teach her is a pleasure → It’s a pleasure to teach her
→ She’s a pleasure to teach

It’s fun for us to be with Margaret → Margaret is fun for us to be with
There is a similar construction for be sure and be certain, seem and appear, be said, be known, etc (cf 12.13). In these cases, however, the corresponding construction with anticipatory it requires a that-clause, and it is the subject of the nominal clause that is fronted:

- It seems that you've made a mistake
  → You seem to have made a mistake

**Existential sentences**

14.19

Existential sentences are principally those beginning with the unstressed word there, and are so called because when unstressed there is followed by a form of the verb be, the clause expresses the notion of existence:

> There is nothing healthier than a cold shower

(‘Nothing healthier exists than a cold shower’)

There is a regular relation of equivalence between existential clauses with there + be and clauses of the standard types (7.2). The equivalence applies, however, only if the clause of the normal pattern has (1) an indefinite subject, and (2) a form of the verb be in its verb phrase. We may derive existential clauses from regular clauses by means of a general rule:

subject + (auxiliaries) + be + predication

→ there + (auxiliaries) + be + subject + predication

The subject of the original clause may be called the ‘notional’ subject of the there-sentence, so as to distinguish it from there itself, which for most purposes is the ‘grammatical’ subject (14.20). Existential there is a device for leaving the subject position vacant of content; there may be regarded as an empty ‘slot-filler’. As we have seen (14.10) the subject of a clause is thematic in typically conveying given information. But when the subject is an indefinite noun phrase, it introduces new information (4.20). Hence, in sentences like A book is in the cupboard there is a certain awkwardness, which may be avoided by introducing there and postponing the indefinite noun phrase to a non-thematic position: There is a book in the cupboard.

Examples of the seven clause types (7.2) are:

**SVC:** Something must be wrong → There must be something wrong

**SVA:** Was anyone around? → Was there anyone around?

**SY:** No one was waiting → There was no one waiting

**SVO:** Plenty of people are getting promotion → There are plenty of people getting promotion

14.20 **Existential there as subject**

**SVOC:** Two bulldozers have been knocking the place flat → There have been two bulldozers knocking the place flat

**SVOA:** A girl is putting the kettle on → There's a girl putting the kettle on

**SVOO:** Something is causing her distress → There's something causing her distress

Passive versions also occur:

**SY_pass:** A whole box has been stolen → There has been a whole box stolen

**SY_passC:** No shops will be left open → There'll be no shops left open

*Note*

(a) The ‘bare existential’ sentence simply postulates the existence of some entity or entities. It has a simple clause structure there + be + indefinite noun phrase:

Undoubtedly, there is a God (‘God exists’)

There have always been wars (‘Wars have always existed/taken place’)

(b) The rule that existential sentences should have an indefinite noun phrase as ‘notional subject’ prevents the derivation of sentences like There’s the money in the box from The money is in the box. This limitation can be waived, however, in answers to existential questions (actual or implied):

- A: Is there anyone coming to dinner?
  - B: Yes, there's Harry and there's also Mrs Jones

Also acceptable is the indefinite exclamatory the followed by the superlative as in:

- There's the oddest-looking man standing at the front door!

(c) Existential there occurs widely in dependent clauses:

- Let me know if there's anyone waiting

It is also fronted as subject in a type of sentence discussed in 14.18:

- There appears to be something wrong with the engine

14.20 **Existential there as subject**

The there of existential sentences differs from there as an introductory adverb both in lacking stress, and in behaving in most ways like the subject of the clause:

(a) It often determines concord, governing a singular form of the verb (especially in declarative sentences) even when the following ‘notional subject’ is plural (see 7.18 Note a):

- There's two patients in the waiting room (informal)

occurs alongside:

- There are two patients in the waiting room.
(b) It can act as subject in yes-no and tag questions:

Is there any more soup?
There's nothing wrong, is there?

(c) It can act as subject in infinitive and -ing clauses:

I don't want there to be any misunderstanding
He was disappointed at there being so little to do

14.21
Existential sentences with 'relative clauses'
There is an important additional type of existential sentence which consists of there + be + noun phrase + clause resembling a postmodifying clause (cf 14.16). Such sentences can be related to sentences of basic clause types without the two restrictions mentioned in 14.19: the verb need not be a form of the verb be, and although there must be an indefinite element, it need not be subject:

Something keeps upsetting him
  → There's something (that) keeps upsetting him
I'd like you to meet some people
  → There's some people (that) I'd like you to meet

It is interesting that the pronoun that can be omitted even when it is subject of the 'relative clause', something not permissible according to the rule for normal relative clause formation.

There is also a common existential sentence pattern there + be + noun phrase + to-infinitive clause:

There was no one for us to talk to
There's (always) plenty of housework to do

Such infinitive clauses are also allied to relative clauses (cf 13.16), as we see on comparing

At last there was something to write home about
with the stiffly formal construction
At last there was something about which to write home

This type of existential sentence sometimes has a definite noun phrase as notional subject:

There's the man next door to consider

Note
Also there is a restricted idiomatic construction consisting of there + be + negative + participial -ing clause:
There's no telling what he'll do

14.22
Existential sentences with verbs other than be
We have finally to consider a less common, more literary type of existential clause in which there is followed by a verb other than be:

There exist similar medieval crosses in different parts of the country
There may come a time when Europe will be less fortunate
Not long after this, there occurred a revolution in public taste

This construction, which may be accounted for by a simple rule S + V → there + V + S (where S is indefinite), is equivalent in effect and style to subject-verb inversion after an initial adverbial. One may notice that the there can be freely omitted in sentences of the structure A + there + V + S:

in front of the carriage (there) rode two men in uniform

The notional subject of the sentence, again, usually has indefinite meaning, and the verb is selected from verbs of existence, position and movement (lie, stand, come, etc).

14.23
Existential sentences with have
Corresponding to the type of existential sentence discussed in 14.19 (there + be + S + predication) there is a type in which the thematic position is not 'empty', but is filled by a noun phrase subject preceding the verb have (or especially in BrE, have got):

He has several friends in China

(cf There are several friends (of his) in China; Several friends (of his) are in China - Type SVA)

I have two buttons missing (on my jacket)

(cf There are two buttons missing ...; Two buttons are missing ... - Type S')

They had a few supporters helping them

(cf There were a few supporters helping them; A few supporters were helping them - Type SVO)

The subject of have refers to a person, thing, etc, indirectly involved in the existential proposition. Often the subject's role is that of 'recipient' (7.11); but the nature of the 'recipient's' involvement in the sentence can be very vague, and the more specific meanings of have (eg possession) are not necessarily implied. A sentence such as My friend had his watch
stolen, in fact, indicates not possession, but lack of possession. The relation of the subject to the rest of the clause can often be expressed by other means, eg by a genitive:

He has a brother in the navy
 (= There is a brother of his in the navy; A brother of his is in the navy)

Unlike the *there*-existential clause, the *have*-existential clause can have a ‘notional subject’ with definite meaning:

He has his eldest son in a boarding school
The car had its roof damaged
(= There was its roof damaged)

Furthermore, sentences with an underlying clause structure *SVA* often have a pronoun prepositional complement which refers back to the subject of *have*:

He had his wife working for him
(= His wife was working for him)
The trees had loads of apples on them

*Have*-existential sentences can also contain relative and infinitive clauses:

I’ve something I’ve been meaning to say to you
(= There’s something . . .)
He has a great deal to be thankful for

The infinitive clause cannot have a subject introduced by for in this construction, as its semantic function has already been appropriated by the subject of *have*; contrast:

There’s a great deal for him to be thankful for

Note
[a] In the passive, the verb is generally actional rather than statal (cf 12.15 Note b):
My friend had his watch stolen implies ‘Someone stole my friend’s watch’ rather than ‘My friend was without a watch because it was stolen’.

[b] In a further use of this construction (especially, but not necessarily, with the passive) the subject of *have* gives up its ‘recipient’ role for one of indirect agency; *He had all his enemies imprisoned* is most likely to mean ‘He caused all his enemies to be imprisoned’.

Postponement
Extrapolation
14.24

There are devices that have the effect of removing an element from its normal position, and placing it towards or at the end of the sentence.

14.26 Extrapolation of participle and other clauses

These devices of postponement serve the two principles of end-focus (14.2) and end-weight (14.8).

We use the term extrapolation for postponement which involves the replacement of the postponed element (especially a nominal clause) by a substitute form.

14.25 Extrapolation of a clausal subject

A clausal subject is often placed at the end of the sentence, and the subject position is filled by the anticipatory pronoun *it*. The resulting sentence thus contains two subjects, which we may identify as the postponed subject (the clause which is notionally the subject of the sentence) and the anticipatory subject (*it*). A simple rule for deriving a sentence with subject extrapolation from one of more regular ordering is:

subject + predicate → *it* + predicate + subject

But it is worth emphasizing that for clausal subjects, extrapolation is more usual than the basic position before the verb:

*SIC*: I’m a pity to make a fool of yourself
(= To make a fool of yourself is a pity)
*SVA*: It’s on the cards that income tax will be abolished
*SV*: It doesn’t matter what you do
*SPO*: It surprised me to hear him say that
*SVO*: It makes her happy to see others enjoying themselves
*SVPred*: It is said that she slipped arsenic into his tea
*SVPred*: It was considered impossible for anyone to escape

14.26 Extrapolation of participle and other clauses

Most kinds of nominal clause may be extrapolated. A notable exception is the nominal relative clause; thus *Whoever said that was wrong* cannot be rendered *It was wrong whoever said that*. Extrapolation of a participle clause is possible:

It was easy getting the equipment loaded
(= Getting the equipment loaded was easy)

but is not very common outside informal speech. Informal examples frequently involve negative + use/good:

It’s no use telling him that
It wouldn’t be any good trying to catch the bus

Note
[a] For certain constructions (cf 12.18, 12.19 Note b) which have all the appearance of clausal extrapolation (*It seems/appears/happened/chanced/etc*), the corresponding
non-extraposed version does not occur. For example, there is no sentence *That
everything is fine seems to correspond with It seems that everything is fine. In such
cases, we may say that the extraposition is obligatory.
(b) Clauses with extraposed subject must be distinguished from superficially similar
clauses in which it is a personal pronoun or empty 'prop' subject: It's good to eat
(e.g. 'This fish is good to eat'); It's lovely weather to go fishing.

14.27
EXTRAPOSITION OF A CLAUSAL OBJECT
In SVO C and SVO A clause types, nominal clauses can or must undergo
extraposition from the position of object:

\[
\begin{align*}
SVO C \{ & \text{(cf. I find working here exciting; Working here is exciting)} \\
& \text{He made it his business to settle the matter} \\
SVO A \{ & \text{(cf. I owe my acquittal to you)} \\
& \text{Something put it into his head that she was a spy}
\end{align*}
\]

14.28
Postponement of object in SVO C and SVO A clauses
When the object is a long and complex phrase, final placement for end-
focus or end-weight is often preferred in SVO C and SVO A clause-types, but
there is no substitution by it:

[A] Shift from S V O A C to S V C A O A order:
They pronounced guilty every one of the accused except the
man who had raised the alarm

[B] Shift from S V O A A to S V A O A:
I confessed to him the difficulties I had found myself in
We heard from his own lips the story of how he had been
stranded for days without food

14.29
Order of direct objects, indirect objects, and particles
There is a free interchange, provided there are no pronouns involved,
between the two orderings

(a) O A + O A + O A + prepositional phrase (7.6)
(b) particle + O A + O A + particle (12.3)

The choice between the two is generally determined by the principles of
end-focus and end-weight:

14.31 Pronouns in apposition
(a) The twins told mother all their secrets
(b) He gave all his heirlooms away

14.30 Discontinuous noun phrases
Sometimes only part of an element is postponed. The most commonly
affected part is the postmodification of a noun phrase, the postponement
resulting in a discontinuous noun phrase (13.42):

A rumour circulated that he was secretly engaged to the Marchioness
(cf. A rumour that . . . circulated)
The time had come to decorate the house for Christmas:

The noun phrase can be a complement or object, as well as subject:
What business is it of yours? (cf. What business of yours is it?)
We heard the story from his own lips of how he was stranded for
days without food

Discontinuity often results, too, from the postponement of postmodifying
phrases of exception (6.40):

All of us were frightened except the captain
Focus, theme, and emphasis 14.32

Note
With some other cases of pronominal apposition, it is customary to postpone the second appositive to a position immediately following the operator rather than to the end of the sentence:

They’re none of them experts
They don’t either of them eat enough
We’ve all made up our minds

Similarly both and each (cf. 9.42).

14.32
Other discontinuities

Comparative constructions of various types are frequently discontinuous. If we think of a comparative clause functionally as forming the postmodification of the comp-element (11.37ff), then the demands of end-focus or end-weight often result in its separation from the head:

He showed less pity to his victims than any other blackmailer in the history of crime (cf. 5.5)

The equivalent sentence without postponement would be extremely awkward: “He showed less pity than any other blackmailer in the history of crime to his victims.” In other cases, the comparative clause, unless postponed, would anticipate the parallel structure in the main clause, making ellipsis virtually impossible:

More people own houses than used to years ago
(rather than “More people than used to years ago own houses.”) Final position for comparative clauses following too, so, and enough is normal, and therefore discontinuity is bound to arise whenever the comp-element is not in final position:

I was so thrilled by the present that I forgot to thank you

Other adjective phrases are occasionally discontinuous:

I was afraid after that to leave the children alone

14.33
Structural compensation

As part of the principle of end-weight in English, there is a feeling that the predicate of a clause should where possible be longer than the subject, thus a principle of structural compensation comes into force. With the SVp pattern, one-word predicates are rare, and there is a preference for expressing simple present or past actions or states by some other, circumlocutory means. For example, the verb sang is very rarely used as a predicate in itself, although semantically complete. We may easily say He sang well or He was singing, but would rarely say simply He sang.

14.35 Stress on operators

A common means of ‘stretching’ the predicate into a multi-word structure is the progressive aspect, as we have just seen. Another is the construction consisting of a verb of general meaning (have, take, give, etc) followed by an ‘effected object’. The curt He ate, He smoked, or He swam can be replaced by He had a meal, He had a smoke, He had a swim (cf. 7.15). Similarly, the habitual use of the present or past in He smokes and He smoked can be expressed by an SVC structure: He is/ was a smoker.

Emotive emphasis

14.34

Apart from the emphasis given by information focus and theme, the language provides means of giving a unit purely emotive emphasis. We have noted in various clausal a number of features of this type. They include exclamations (7.63), the persuasive do in commands (7.58ff), interjections, expletives, and intensifiers (5.14, 5.23ff, 8.12ff), including the general clause emphazizers such as actually, really, and indeed. A thorough study of emotive expressions would take us into the realms of figures of speech such as simile, hyperbole, and irony. Here we confine ourselves to two devices which fall squarely within the province of grammar.

14.35

Stress on operators

If an auxiliary is stressed or given nuclear prominence, the effect is often to add exclamatory emphasis to the whole sentence:

That will be nice! What are you doing? We have enjoyed ourselves!

Auxiliary do is introduced where there would otherwise be no operator to bear the emphatic stress:

You do look a wreck. He does look pale. You did give me a fright.

This device is distinct from that of placing information focus on the operator (14.6). In the first place, emotive emphasis on the operator is not necessarily signalled by pitch prominence: ordinary sentence stress can have a similar effect. Secondly, emotive emphasis has no contrastive meaning; by saying That will be nice, for example, we do not imply that now or in the past things have been the opposite of nice. Further intensification, if desired, can be achieved by placing an emphazizer such as really or certainly in front of the operator: It really does taste nice.
14.36  Non-correlative so and such
In familiar speech, and especially perhaps in the speech of older women, stress is also applied to the determiner such and to the adverb so, to give exclamatory force to a statement, question, or command:

He's súch a nice man!
Why are you súch a small boy?
Don't upset yourself! so!

Again, for extra emphasis, the exclamatory word so or such may be given nuclear prominence: I'm sO PLEased. So and such in statements are almost equivalent to how and what in exclamations (7.63):

They're such delightful children!
What delightful children they are!

Note
Other words of strong emotive import may take a nuclear tone for special emotive force:
I wish you'd listen!
I'm terribly sorry!

Reinforcement 14.37
Reinforcement by repetition and pronouns
Reinforcement is a feature of colloquial style whereby some item is repeated (either completely or by pronoun substitution) for purposes of emphasis, focus, or thematic arrangement. Its simplest form is merely the reiteration of a word or phrase for emphasis or clarity:

It's far, far too expensive (cf 5.33)
I agree with every word you've said - every single word

A reinforcing pronoun is sometimes inserted, in informal speech, within a clause where it substitutes for an initial noun phrase (cf 9.52 Note b):

This man I was telling you about - na used to live next door to me

The speaker may insert the pronoun because the initial phrase is too long and unwieldy to form the subject of the sentence without awkwardness or danger of confusion or because he cannot in the act of speaking think of any way of continuing without restructuring the sentence and therefore decides to make a fresh start.

14.38  Noun phrase tags
The opposite case arises when a noun phrase tag (cf 9.52 Note a) is added to the end of a sentence in informal speech, clarifying the meaning of a pronoun within it:

They're all the same, these politicians

The tag generally occurs in a separate tone unit, with a rising tone. It can be inserted parenthetically, as well as placed finally:

He's got a good future, your brother, if he perseveres
An operator is added to the noun phrase for greater explicitness in some dialects. We have therefore a tag statement rather than a tag noun phrase:

That was a lark, that was!
He likes a drink now and then, Jim does

Bibliographical note
Theme, focus, emphasis, and related matters are treated in Firbas (1960); Halliday (1967-8) and (1970); Huddleston (1971), Chapter 8; Lees (1960b); Rosenbaum (1967); Svartvik (1966).
APPENDIX I
WORD-FORMATION

I.1
A form to which a rule of word-formation is applied is called a base (as distinct from stem: see Note below), and the chief processes of English word-formation by which the base may be modified are:

(a) adding a prefix to the base, with or without a change of word-class (eg: author → co-author) (App I.12 ff)
(b) adding a suffix to the base, with or without a change of word-class (eg: drive → driver) (App I.13 ff)

I.2
Prefixation

Prefixes do not generally alter the word-class of the base. Productive prefixes normally have a light stress on their first (or only) syllable, the main stress of the word coming on the base: pre-fabricated. This stress pattern will be assumed in the examples in the following tables, unless words are marked to the contrary.

I.3
Negative prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>UN-</td>
<td>‘the opposite of’</td>
<td>adjectives</td>
</tr>
<tr>
<td>(cf App I.4)</td>
<td>‘not’</td>
<td>participles</td>
</tr>
<tr>
<td></td>
<td></td>
<td>unfair</td>
</tr>
<tr>
<td></td>
<td></td>
<td>unassuming</td>
</tr>
<tr>
<td></td>
<td></td>
<td>unexpected</td>
</tr>
<tr>
<td>NON-</td>
<td>‘not’</td>
<td>various classes</td>
</tr>
<tr>
<td></td>
<td></td>
<td>non-smoker</td>
</tr>
<tr>
<td></td>
<td></td>
<td>non-drip (paint)</td>
</tr>
<tr>
<td>IN-</td>
<td>(as for un-)</td>
<td>adjectives</td>
</tr>
<tr>
<td></td>
<td></td>
<td>insane</td>
</tr>
<tr>
<td>DIS-</td>
<td>(as for un-)</td>
<td>adjectives</td>
</tr>
<tr>
<td>(cf App I.4)</td>
<td></td>
<td>verbs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>disloyal</td>
</tr>
<tr>
<td></td>
<td></td>
<td>dislike</td>
</tr>
<tr>
<td></td>
<td></td>
<td>disfavour</td>
</tr>
<tr>
<td>A-</td>
<td>‘lacking in’</td>
<td>adjectives</td>
</tr>
<tr>
<td></td>
<td></td>
<td>amoral</td>
</tr>
<tr>
<td></td>
<td></td>
<td>asymmetry</td>
</tr>
</tbody>
</table>

Note
[6] Non- can normally be regarded as corresponding to class negation: non-smoker = one who does not smoke. It frequently contrasts with in- in expressing binary (nongradable) contrast, rather than the opposite end of a scale: eg: non-scientific vs un-scientific.
[7] In- is realized as /i/ before /l/, eg: illogical, im- before bilabials, eg: improper, and /ɪ/ before /f/, eg: irrelevant.
I.4
Reversative or privative prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>UN- 'to reverse action'</td>
<td>verbs</td>
<td>untie, unhorse</td>
</tr>
<tr>
<td></td>
<td>'to deprive of'</td>
<td></td>
</tr>
<tr>
<td>DE- 'to reverse action'</td>
<td>verbs</td>
<td>defrost</td>
</tr>
<tr>
<td></td>
<td>abstract nouns</td>
<td>deforestation</td>
</tr>
<tr>
<td>DIS- (as for un-)</td>
<td>verbs abstract nouns</td>
<td>disconnect</td>
</tr>
<tr>
<td></td>
<td>participles nouns</td>
<td>discoloured discontent</td>
</tr>
</tbody>
</table>

I.5
Pejorative prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>MIS- 'wrongly'</td>
<td>verbs abstract nouns participles</td>
<td>misinform, misconduct, misleading</td>
</tr>
<tr>
<td></td>
<td>abstract nouns</td>
<td></td>
</tr>
<tr>
<td>MAL- 'bad(ly)'</td>
<td>verbs abstract nouns participles adjectives</td>
<td>maltreat, malfunction, malformed, malodorous</td>
</tr>
<tr>
<td></td>
<td>participles adjectives</td>
<td></td>
</tr>
<tr>
<td>PSEUDO- 'false, imitation'</td>
<td>nouns adjectives</td>
<td>pseudo-intellectual, (n or adj)</td>
</tr>
</tbody>
</table>

Note
For other prefixes with pejorative overtones, see ARCH-, OVER-, UNDER-, and HYPER- (App I.6). Like pseudo- is QUASI.

I.6
Prefixes of degree or size

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARCH- 'highest, worst'</td>
<td>nouns (mainly human)</td>
<td>archduke, arch-enemy</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SUPER- 'above, more than, better'</td>
<td>nouns adjectives</td>
<td>superman, supermarket, supernatural</td>
</tr>
<tr>
<td></td>
<td>(cf App I.8)</td>
<td></td>
</tr>
<tr>
<td>OUT- 'to do something faster, longer, etc than . . .'</td>
<td>verbs (mainly intrans)</td>
<td>outrun, outline</td>
</tr>
</tbody>
</table>

1.7
Word-formation

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUR- 'over and above'</td>
<td>nouns</td>
<td>surtax</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SUB- 'lower than,'</td>
<td>adjectives</td>
<td>subhuman, substandard</td>
</tr>
<tr>
<td>(cf App I.8)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>OVER- 'too much'</td>
<td>verbs participles</td>
<td>overeat, overdressed, overconfident</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>UNDER- 'too little'</td>
<td>verbs participles</td>
<td>undercook, underprivileged</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>HYPER- 'extremely'</td>
<td>adjectives</td>
<td>hypercritical</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>ULTRA- 'extremely, beyond'</td>
<td>adjectives</td>
<td>ultra-violet, ultra-modern</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>MINI- 'little'</td>
<td>nouns</td>
<td>mini, skirt</td>
</tr>
</tbody>
</table>

Note
Mini- is often used for humorous coinages. The contrasting prefixes maxi- ('large', 'long') and midi- ('medium') are less common, eg: maxi-skirt.

1.7
Prefixes of attitude

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO- 'with, joint'</td>
<td>verbs nouns</td>
<td>cooperate, co-pilot</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>COUNTER- 'in opposition to'</td>
<td>verbs nouns</td>
<td>counteract (also counterfact), counter-revolution</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>ANTI- 'against'</td>
<td>nouns adjectives</td>
<td>anti-missile (attributive), anti-social, anti-clockwise</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>PRO- 'on the side of'</td>
<td>nouns adjectives</td>
<td>pro-Common Market (attrib), pro-communist</td>
</tr>
</tbody>
</table>

Note
Anti- suggests simply an attitude of opposition, while counter- suggests action in opposition to or in response to a previous action.
### I.8 Locative prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUPER-</td>
<td>'over'</td>
<td>nouns</td>
</tr>
<tr>
<td>SUB-</td>
<td>'beneath,</td>
<td>nouns</td>
</tr>
<tr>
<td></td>
<td>'lesser in rank'</td>
<td>adjectives</td>
</tr>
<tr>
<td>INTER-</td>
<td>'between,'</td>
<td>denominal</td>
</tr>
<tr>
<td></td>
<td>'among'</td>
<td>adjectives</td>
</tr>
<tr>
<td>TRANS-</td>
<td>'across, from</td>
<td>denominal</td>
</tr>
<tr>
<td></td>
<td>'one place to</td>
<td>adjectives</td>
</tr>
<tr>
<td></td>
<td>'another'</td>
<td>verbs</td>
</tr>
</tbody>
</table>

### I.9 Prefixes of time and order

<table>
<thead>
<tr>
<th>meaning</th>
<th>added to:</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>FORE-</td>
<td>'before'</td>
<td>mainly verbs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>abstract nouns</td>
</tr>
<tr>
<td>PRE-</td>
<td>'before'</td>
<td>nouns</td>
</tr>
<tr>
<td></td>
<td></td>
<td>adjectives</td>
</tr>
<tr>
<td>POST-</td>
<td>'after'</td>
<td>nouns</td>
</tr>
<tr>
<td></td>
<td></td>
<td>adjectives</td>
</tr>
<tr>
<td>EX-</td>
<td>'former'</td>
<td>human nouns</td>
</tr>
<tr>
<td>RE-</td>
<td>'again,' 'back'</td>
<td>verbs</td>
</tr>
<tr>
<td></td>
<td></td>
<td>abstract nouns</td>
</tr>
</tbody>
</table>

**Note**
As an exception to the statement in App 1.2, pre- and post- normally involve conversion from noun to adjective.

### I.10 Number prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>UNIT-, MONO-</td>
<td>'one'</td>
</tr>
<tr>
<td></td>
<td>unilateral, monotheism</td>
</tr>
<tr>
<td>BI-, DI-</td>
<td>'two'</td>
</tr>
<tr>
<td></td>
<td>bilingual, dipole</td>
</tr>
<tr>
<td>TRI-</td>
<td>'three'</td>
</tr>
<tr>
<td></td>
<td>tripartite</td>
</tr>
<tr>
<td>MULTI-, POLY-</td>
<td>'many'</td>
</tr>
<tr>
<td></td>
<td>multi-racial, polysyllabic</td>
</tr>
</tbody>
</table>

### I.13 Word-formation

**Note**
*Bimonthly* is notoriously ambiguous, in that it can mean either 'every two months' or 'twice every month'. *Biweekly* has the same ambiguity. *Biannual* normally has only the meaning 'every two years' (in contrast with *bimennial* 'twice a year'), but many speakers find it as ambiguous as *bimonthly*.

### I.11 Other prefixes

<table>
<thead>
<tr>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO-</td>
<td>'self'</td>
</tr>
<tr>
<td></td>
<td>autobiography</td>
</tr>
<tr>
<td>NEO-</td>
<td>'new, revived'</td>
</tr>
<tr>
<td></td>
<td>neo-Gothic</td>
</tr>
<tr>
<td>PAN-</td>
<td>'all, world-wide'</td>
</tr>
<tr>
<td></td>
<td>pan-African</td>
</tr>
<tr>
<td>PROTO-</td>
<td>'first, original'</td>
</tr>
<tr>
<td></td>
<td>prototype</td>
</tr>
<tr>
<td>SEMI-</td>
<td>'half'</td>
</tr>
<tr>
<td></td>
<td>semicircle</td>
</tr>
<tr>
<td>VICE-</td>
<td>'deputy'</td>
</tr>
<tr>
<td></td>
<td>vice-president</td>
</tr>
</tbody>
</table>

### I.12 Conversion prefixes

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) nouns → particpial</td>
<td>(a) bewigged</td>
</tr>
<tr>
<td>adjectives</td>
<td>bespectacled</td>
</tr>
<tr>
<td>(b) verbs, adjectives</td>
<td>(b) bedazzle</td>
</tr>
<tr>
<td>nouns</td>
<td>becoming</td>
</tr>
<tr>
<td>(transitive verbs)</td>
<td>bewitch</td>
</tr>
<tr>
<td>(b) bedazzle</td>
<td>bewitch</td>
</tr>
</tbody>
</table>

### I.13 Classification of suffixes

Unlike prefixes, suffixes frequently alter the word-class of the base; for example, the adjective *kind*, by the addition of the suffix *-ness*, is changed into an abstract noun *kindness*.

We shall group suffixes not only by the class of word they form (as noun suffixes, verb suffixes, etc) but also by the class of base they are typically added to (denominational, i.e. from nouns, de-adjectival, de- verbal suffixes, etc). More usefully, we may extend this latter terminology,
where convenient, to the derived words themselves, and talk of worker as  
*VERBAL noun, hopeful* as a *DENOMINAL* adjective, etc.  
On stress with suffixation, see App II.2.

Note
[c] Inflectional suffixes, if any, *always* follow derivational suffixes: *workers*.
[b] Deverbal nouns do not include the 'gerund' class of nouns ending in -ing (waiting, etc.) which are designated *VERBAL nouns* (I.13.23). Because of the complete productivity of the verbal noun category, the relation between verbal nouns and the corresponding verbs is considered to be purely grammatical rather than derivational. Another class of words having arguably the same status of full productivity is that of *AGENTIAL nouns* (App I.16): worker, etc. Notice that although not all verbs have a corresponding institutionalized (or 'permanulement') agential noun (trick ~ trickier, flirt ~ flouter), it is always possible to create an *ad hoc* or 'temporary' agential noun in a frame such as a *regular* . . . -er of N:
John regularly flouts authority ~ *John is a flouter*  
John is a regular flouter of authority

### L.14  
**Noun → noun suffixes**

<table>
<thead>
<tr>
<th>added to + to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>[A] occupational</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>-STER, -TER</td>
<td>nouns → personal nouns</td>
<td>'person engaged in an occupation or activity'</td>
</tr>
<tr>
<td>-ER</td>
<td>nouns → nouns, (cf App I.16)</td>
<td>varied meanings, eg 'inhabitant of X'</td>
</tr>
<tr>
<td><strong>[B] diminutive or feminine</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>-LET</td>
<td>count nouns → count nouns</td>
<td>'small, unimportant'</td>
</tr>
<tr>
<td>-ETTE</td>
<td>nouns → nouns</td>
<td>(a) 'small, compact'</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(b) 'imitation'</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(c) 'female'</td>
</tr>
<tr>
<td>-ESS</td>
<td>animate nouns → animate nouns</td>
<td>'female'</td>
</tr>
<tr>
<td>-Y, -IE</td>
<td>nouns → nouns</td>
<td>daddy, auntie</td>
</tr>
</tbody>
</table>

### L.15  
**Word-formation**

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>[C] status, domain</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>-HOOD nouns → abstract nouns</td>
<td>'status'</td>
<td>boyhood</td>
</tr>
<tr>
<td>-SHIP (as for -hood)</td>
<td>'status, condition'</td>
<td>friendship, dictatorship</td>
</tr>
<tr>
<td>-DOM (as for -hood)</td>
<td>'domain, condition'</td>
<td>kingdom, stardom</td>
</tr>
<tr>
<td>-OCRACY (as for -hood)</td>
<td>'system of government'</td>
<td>democracy</td>
</tr>
<tr>
<td>-ERY chiefly nouns → (a) abstract noun: (a) 'behaviour'</td>
<td>(a) slavery</td>
<td>(b) refinery, munition</td>
</tr>
<tr>
<td></td>
<td>(b) concrete count nouns: (b) 'place of activity or abode'</td>
<td>(c) machinery</td>
</tr>
<tr>
<td></td>
<td>(c) non-count nouns: (c) 'collectivity'</td>
<td></td>
</tr>
</tbody>
</table>

**[D] Other**

| -ING | count nouns → non-count nouns | 'the substance of which N is composed' | panelling |
| -FUL | count nouns → count nouns | 'the amount which N contains' | mouthful |

Note
[a] The diminutive suffix -ette is added to various word-classes, usually with a mildly contemptuous flavour: prisettling, underteling.
[b] The suffix -y,-ie largely restricted to familiar contexts, indicates endearment or familiarity. It is frequently added to a clipped form of the base eg: movies (esp AmE: 'moving pictures').

### L.15  
**Noun/adjective → noun/adjective suffixes**

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-ITE</td>
<td>nouns (chiefly names) → personal nouns</td>
<td>'member of community faction/type'</td>
</tr>
<tr>
<td>-IAN nouns (chiefly proper) → personal nouns, non-gradable adjectives</td>
<td>'pertaining to . . .'</td>
<td>Indonesian, republican</td>
</tr>
<tr>
<td>-IZE (as for -ize)</td>
<td>'nationality'</td>
<td>Chi'nese</td>
</tr>
</tbody>
</table>
### L.16 Verb → noun suffixes

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-ER, -OR verbs (mainly dynamic) → nouns (mainly personal)</td>
<td>agentive and instrumental</td>
<td>driver, receiver, actor</td>
</tr>
<tr>
<td>-ANT verbs → nouns</td>
<td>agentive and instrumental</td>
<td>inhabitant, disinfectant</td>
</tr>
<tr>
<td>-EE verbs → personal nouns</td>
<td>passive</td>
<td>employee</td>
</tr>
<tr>
<td>-ATION verbs → (a) abstract nouns (b) collective nouns</td>
<td>(a) 'state, action' (b) 'institution'</td>
<td>exploration, organization</td>
</tr>
<tr>
<td>-MENT verbs → nouns (chiefly abstract)</td>
<td>'state, action'</td>
<td>amazement</td>
</tr>
<tr>
<td>-AL verbs → nouns (chiefly count abstract)</td>
<td>'action'</td>
<td>refusal, dismissal</td>
</tr>
<tr>
<td>-ING verbs → (a) abstract nouns (b) concrete nouns</td>
<td>(a) 'activity' (b) 'result of activity'</td>
<td>driving, building</td>
</tr>
<tr>
<td>-AGE verbs → non-count abstract nouns</td>
<td>'activity, result of activity'</td>
<td>drainage</td>
</tr>
</tbody>
</table>

### L.17 Adjective → noun suffixes

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-NESS adjectives → abstract nouns</td>
<td>'state, quality'</td>
<td>happiness</td>
</tr>
<tr>
<td>-ITY (as for -ness)</td>
<td>'state, quality'</td>
<td>sanity</td>
</tr>
</tbody>
</table>

### L.18 Verb suffixes

<table>
<thead>
<tr>
<th>added to → to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-IFY nouns, adjectives → verbs (chiefly transitive)</td>
<td>causative</td>
<td>simplify</td>
</tr>
<tr>
<td>-IZE (as for -ify) (Br.Eng. also -ise)</td>
<td>causative</td>
<td>popularize</td>
</tr>
<tr>
<td>-EN adjectives → verbs (a) transitive (b) intransitive</td>
<td>(a) causative (b) 'become X'</td>
<td>(a) deafen (b) dauden</td>
</tr>
</tbody>
</table>

### L.19 Noun → adjective suffixes

<table>
<thead>
<tr>
<th>added to→ to form</th>
<th>meaning</th>
<th>examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-FUL nouns (chiefly abstract) → gradable adjectives</td>
<td>'having . . .', 'giving . . .', 'helpful</td>
<td></td>
</tr>
<tr>
<td>-LESS nouns → adjectives</td>
<td>'without . . .'</td>
<td>childless</td>
</tr>
<tr>
<td>-LY noun (chiefly concrete) → gradable adjectives</td>
<td>'having the qualities of . . .'</td>
<td>cowardly</td>
</tr>
<tr>
<td>-LIKE (as for -ly)</td>
<td>'having the qualities of'</td>
<td>childlike</td>
</tr>
<tr>
<td>-Y nouns (chiefly concrete non-count) → gradable adjectives</td>
<td>'like . . .', 'covered with . . .'</td>
<td>creamy, hairy</td>
</tr>
</tbody>
</table>
1.20 Some adjective suffixes common in borrowed and neo-classical words

<table>
<thead>
<tr>
<th>Suffix</th>
<th>Used to form</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-AL (also -tal, -ical)</td>
<td>primarily non-gradable adjectives</td>
<td>criminal, editorial, musical</td>
</tr>
<tr>
<td>-IC</td>
<td>gradable or non-gradable adjectives</td>
<td>heroic</td>
</tr>
<tr>
<td>-IVE (also -ative, -itive)</td>
<td>gradable or non-gradable adjectives</td>
<td>attractive, affirmative, sensitive</td>
</tr>
<tr>
<td>-OUS (also -eous, -ious)</td>
<td>primarily gradable adjectives</td>
<td>virtuous, courteous, venomous</td>
</tr>
</tbody>
</table>

Note
[a] In some adjectives, -ic alternates with -ical, with a difference of meaning:
    - an economic miracle vs. the car is economical to run
      (‘in the economy’ vs. ‘money-saving’)
    - a historic building vs. historical research
      (‘with a history’ vs. ‘pertaining to history’)
[b] There are several less common neo-classical affixes, among which -ory, -ate and -or are particularly notable: revolutionary, affectionate, obligatory. Adjectives in -ory alternate (with or without stress shift) with nouns in -tion: obligatory ~ obligation, satisfactory ~ satisfaction.

1.21 Other adjective suffixes

<table>
<thead>
<tr>
<th>Suffix</th>
<th>Used to form</th>
<th>Meaning</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-ABLE, -IBLE</td>
<td>verbs (chiefly transitive)</td>
<td>be V-ed</td>
<td>readable, forcible</td>
</tr>
<tr>
<td>-ISH</td>
<td>gradable adjectives</td>
<td>somewhat</td>
<td>youngish</td>
</tr>
<tr>
<td>-ED</td>
<td>nouns or noun phrases</td>
<td>having ...</td>
<td>balconied</td>
</tr>
</tbody>
</table>

1.22 Adverb suffixes

<table>
<thead>
<tr>
<th>Suffix</th>
<th>Used to form</th>
<th>Meaning</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>-LY</td>
<td>adverbs of manner, viewpoint, etc</td>
<td>in a ... manner, etc</td>
<td>happily, strangely</td>
</tr>
<tr>
<td>-WARD(S)</td>
<td>adverbs, nouns</td>
<td>manner/direction</td>
<td>backward(s)</td>
</tr>
<tr>
<td>-WISE</td>
<td>nouns</td>
<td>in the manner of ...</td>
<td>crabwise</td>
</tr>
<tr>
<td>-LIKE</td>
<td>adverbs</td>
<td>as far as ...</td>
<td>weather-wise</td>
</tr>
</tbody>
</table>

Note
Also -STYLE and -FASHION (‘in the manner/style of’) are sometimes used as adverbial suffixes: They ate American-style (cf. 8.20).

Conversion
1.23 Conversion and suffixation

Conversion is the derivational process whereby an item changes its wordclass without the addition of an affix. For example, the verb release (as in They released him) corresponds to a noun release (as in They ordered his release), and this relationship may be seen as parallel to that between the verb acquit and the noun acquittal.

1.24 Verb → noun

[A] 'State' (from stative verbs to nouns): doubt, love
[B] 'Event/activity' (from dynamic verbs): laugh, walk
[C] 'Object of V': answer ('that which is answered'), catch
[D] 'Subject of V': bore ('someone who bores/is boring'), chort
[E] 'Instrument of V': cover ('something that covers things'), wrap
[F] 'Manner of V-ing': throw, walk
[G] 'Place of V': retreat, turn

1.25 Adjective → noun

Miscellaneous examples are daily ('daily newspaper'), comic ('comic actor') (young) marrieds ('young married people'; informal). The
adjective → noun conversion can usually be explained in terms of a well-established adjective+noun phrase from which the noun has been elided.

I.26
Noun → verb

[A] 'To put in/on N': bottle, corner
[B] 'To give N to provide with N': coat ('give a coat of paint, etc') to', mask
[C] 'To deprive of N': peel ('remove the peel from'), skin
[D] 'To... with N as instrument': brake, knife ('stab with a knife')
[E] 'To be/act as N with respect to...': nurse, referee
[F] 'To make/change... into N': cash, cripple
[G] 'To (a) sen.l(b) go by N': (a) mail, ship; (b) bicycle, motor

I.27
Adjective → verb

[A] (transitive verbs) 'to make (more) adj': calm, dirty
[B] (intransitive verbs) 'to become adj' (generally adjectives in Type A can also have this function): dry, empty

Sometimes a phrasal verb is derived from an adjective by the addition of a particle: calm down ('to become calm')

This category of conversion competes with -en suffixation (App I.18), and sometimes both derivations are available for the same adjective:

He blacked/blackened his face with soot

I.28
Minor categories of conversion

I [Conversion from closed-system words to nouns:
This book is a must for the student of aerodynamics

II] Conversion from phrases to nouns:
Whenever I gamble, my horse is one of the also-rans
(I.e. one of the horses which 'also ran' but was not among the winners)

III] Conversion from phrases to adjectives:
an under-the-weather feeling I feel very under-the-weather
(I.e. indisposed)

IV] Conversion from affixes to nouns:
Patriotism, and any other items you'd like to name

I.29
Change of secondary word-class: nouns

(a) Non-count → count
(i) 'A unit of N': two coffees ('cups of coffee')
(ii) 'A kind of N': Some paints are more lasting than others
(iii) 'An instance of N' (with abstract nouns): a difficulty

(b) Count → non-count
'N viewed in terms of a measurable extent' (normally only after expressions of amount): a few square feet of floor

(c) Proper → common (initial capital usually retained)
(i) 'A member of the class typified by N': a Jeremiah ('a gloomy prophet')
(ii) 'A person, place, etc called N': There are several Cambridges ('places called Cambridge') in the world
(iii) 'A product of N or a sample or collection of N's work': a Rolls Royce ('a car manufactured by Rolls Royce'), a Renoir, a (complete) Shakespeare
(iv) 'Something associated with N': wellingtons, a sandwich

(d) Stative → dynamic
He's being a fool ('He's behaving like a fool')

I.30
Change of secondary word-class: verbs

(a) Intransitive → transitive
'Cause to V': ran the water

(b) Transitive → intransitive
(i) 'Can be V-ed' (often followed by an adverb such as well or badly): Your book reads well
(ii) 'To V oneself': Have you washed yet? ('washed yourself')
(iii) 'To V someone/something/etc': We have eaten already
(iv) 'To be V-ed': The door opened

(c) Intransitive → intensive
(i) Current meaning: He lay flat
(ii) Resulting meaning: He fell flat

(d) Intensive → intransitive
The milk turned (i.e. 'turned sour')

(e) Monotransitive → complex transitive
(i) Current meaning: We catch them young
(ii) Resulting meaning: I wiped it clean.
I.31
Change of secondary word-class: adjectives
(a) Non-gradable → gradable
I have a very legal turn of mind
(b) Stative → dynamic
He's just being friendly ('acting in a friendly manner')

I.32
Approximate conversion: voicing and stress shift
In some cases, conversion is approximate rather than complete: that is, a word, in the course of changing its grammatical function, may undergo a slight change of pronunciation or spelling. The most important kinds of alteration are (1) voicing of final consonants, and (2) shift of stress.

(1) Voicing of final consonants (noun → verb)
advice → advise, thief → thief, sheath → sheathe, and (not shown in spelling) house → house

(2) Shift of stress (see App II.2)
When verbs of two syllables are converted into nouns, the stress is sometimes shifted from the second to the first syllable:
conduct, conflict, contrast, convert, convict, export, extract, import, insult, permit, present, produce, rebel, record

Occasionally, a word of more than two syllables varies in this way: overflow (v) → 'overflow' (n). There are many examples of dissyllabic noun-verb pairs which do not differ in stress; for example, 'contact' (v), 'contact' (n), and debate (v), debate (n).

Compounds
I.33
A compound is a unit consisting of two or more bases (App I.1). There is no one formal criterion that can be used for a general definition of compounds in English (cf 13.34 f); on stress cf App II.3.

We concentrate on the productive or creative types of compounding, and indicate the syntactic relations of the compounding elements by paraphrases. For example, the two compounds playboy and call-girl are superficially similar, consisting of verb + noun. Yet the relations of their elements are different:
playboy ~ the boy plays, ie verb + subject
call-girl ~ X calls the girl, ie verb + object

I.36 Word-formation
Noun compounds
I.34
SUBJECT AND VERB COMPOUNDS
SUNRISE ~ the sun rises
noun + deverbal noun
Very productive type
bee-sting
earthquake
headache
RATTLESNAKE ~ the snake rattles
verb + noun
flashlight
hangman
DANCING GIRL ~ the girl dances
verbal noun + noun
firing squad
washing machine

I.35
VERB AND OBJECT COMPOUNDS
SIGHTSEEING ~ X sees sights (cf App I.39)
noun + verbal noun
n (Number is neutralized)
Very productive type
air-conditioning
brainwashing
dressmaking
story-telling
taxpayer ~ X pays taxes
taxon + agentive or instrumental noun
n (Number is neutralized)
Very productive type
gamekeeper
record-player
songwriter
window-cleaner

BLOODTEST ~ X tests blood
count nouns
noun + deverbal noun
book review
haircut
birth-control
self-control

CALL-GIRL ~ X calls the girl
verb + noun
knitwear

CHEWING GUM ~ X chews gum
verbal noun + noun
cooking apple
spending money

I.36
VERB AND ADVERBIAL COMPOUNDS
SWIMMING POOL ~ X swims in the pool
verb + noun
Very productive type
typing paper
adding machine
walking stick

DAYDREAMING (cf App I.40)
~ X dreams during the day
noun + verbal noun
sun-bathing
sleepwalking
handwriting
## Appendix 1.37

### I.37

#### VERBLES COMPOUNDS

| WINDMILL ~ *the wind [powers] the mill* | hydrogen bomb |
| noun + noun | motorcycle |

| TOY FACTORY ~ *the factory [produces] toys* | oil well |
| noun + noun | tear gas |

| BLOODSTAIN ~ *the blood [produces] stains* | hay fever |
| noun + noun | sawdust |

| DOORKNOB ~ *the door [has] a knob* | shirt-sleeves |
| noun + noun | table leg |
| Very productive type | television screen |

| GIRL-FRIEND ~ *the friend [is] a girl* | oak tree |
| noun + noun | tape measure |

| DARKROOM ~ *the room [is] dark* | hardboard |
| adjective + noun | madman |

| FROGMAN ~ *the man [is] like a frog* | goldfish |
| noun + noun | kettledrum |
| Very productive type | tissue paper |

| SNOWFLAKE ~ *the flake [consists of] snow* | bread-crumbs |
| noun + noun | sand dune |

| ASHTRAY ~ *the tray [is] for ash* | coffee time |
| noun + noun | facelift |
| Very productive type | fire engine |

### L.38

#### BAHUVRIHI COMPOUNDS

| PAPERBACK | noun + noun |
| ~ *[the book has] a paper back* | adjective + noun |
|+A *bahuvrihi compound* | blockhead |
| names an entire thing by | hunchback |
| specifying some feature | pot-belly |
| | paleface |

### Adjective compounds

#### L.39

| MAN-EATING ~ *X* eats men (cf App I.35) | breath-taking |
| noun + -ing participle | heart-breaking |

### L.40

#### VERB AND ADVERBIAL COMPOUNDS

| OCEAN-GOING ~ *X* goes across oceans (cf App I.36) | law-abiding |
| noun + -ing participle | mouth-watering |

| HEARTFELT ~ *X* feels it in the heart | handmade |
| noun + -ed participles | self-employed |

| HARD-WORKING ~ *X* works hard | easy-going |
| adjective/adverb + -ing participle | good-looking |

| QUICK-FROZEN ~ *X* is frozen quickly | far-fetched |
| adjective/adverb + -ed participle | new-laid |

### L.41

#### VERBLES COMPOUNDS

| CLASS-CONSCIOUS ~ *X* is conscious with respect to class | duty-free |
| noun + adjective | homesick |

| GRASS-GREEN ~ *X* is green like grass | brick red |
| noun + adjective | sea-green |

| BRITISH-AMERICAN (initiative) ~ *the British and the Americans jointly made an initiative* | bitter-sweet |
| adjective + adjective | deaf-mute |

#### Note

The first element of coordination compounds frequently ends in -o and is not itself an independent word, e.g., *psycholinguistics, Anglo-American*.
I.42 Verb compounds

<table>
<thead>
<tr>
<th>SIGHTSEE ~ X sees sights</th>
<th>house-hunt</th>
</tr>
</thead>
<tbody>
<tr>
<td>noun + verb</td>
<td>lip-read</td>
</tr>
<tr>
<td>SPRING-CLEAN ~ X cleans in the spring</td>
<td>baby-sit</td>
</tr>
<tr>
<td>noun + verb</td>
<td>sleep-walk</td>
</tr>
</tbody>
</table>

Note
These examples are 'back-formations' from such nouns as *sightseeing* (App I.35) and *spring cleaning* (App I.36), and from a historical viewpoint cannot be described as noun + verb compounds.

I.43 Reduplicatives
Some compounds have two or more elements which are either identical or only slightly different; eg: goody-goody ('affectionately good', informal). The difference between the two elements may be in the initial consonants, as in *walkie-talkie*, or in the medial vowels, eg: *criss-cross*. Most of the reduplicatives are highly informal or familiar, and many derive from the nursery, eg: *din-din* ('dinner'). The most common uses of reduplicatives are:

(a) to imitate sounds, eg: *tick-tock* (of clock)
(b) to suggest alternating movements, eg: *seesaw*
(c) to disparage by suggesting instability, nonsense, insincerity, vacillation, etc, eg: *higgledy-piggledy*, *wissy-wissy*
(d) to intensify, eg: *tip-top*

I.44 Clipping
The term 'clipping' denotes the subtraction of one or more syllables from a word. The shortening may occur at:

(a) the beginning of the word: *phone ~ telephone*
(b) the end of the word (more commonly): *photo ~ photograph*
(c) at both ends of the word (rare): *flu ~ influenza*

The clipped form tends to be used especially in informal style.

I.45 Blends
In a blend at least one of the elements is fragmentary when compared with its corresponding uncompounded word form. For example *brunch* (esp AmE, "a meal subsuming breakfast and lunch") is derived from *br(eakfast) + (l)unch*. Many blends have only a short life and are very informal, but some have become more or less fully accepted in the language, eg: *motel* from *motor + hotel*, *smog* from *smoke + fog*, *transistor* from *transfer + resistor*.

I.46 Acronyms
Acronyms are words formed from the initial letters (or larger parts) of words. New acronyms are freely produced, particularly for names of organizations.

(1) Acronyms pronounced as sequences of letters can be called 'alphabetisms':
(a) The letters represent full words: *C.O.D. ~ cash on delivery, UN ~ the United Nations*
(b) The letters represent elements in a compound or just parts of a word: *TV ~ television, GHQ ~ General Headquarters*

(2) Many acronyms are pronounced as words, eg: *radar* (from 'radio detecting and ranging').

Bibliographical note
Marchand (1969) is the most comprehensive reference work on English word-formation, but cf also Adams (1973). For bibliography, see Stein (1973).
II.1 Stress, rhythm, and intonation are all concerned with the perception of relative prominence. We speak of stress when we are considering the prominence with which one part of a word or of a longer utterance is distinguished from other parts. Thus we say that indignant has stress on the second syllable or that the word like is stressed in ‘Does he like it?’:

Indignant

We speak of rhythm when we are considering the pattern formed by the stresses perceived as peaks of prominence or beats, occurring at somewhat regular intervals of time, the recurring beats being regarded as completing a cycle or ‘measure’. Thus, as a language with a tendency for ‘stress-toned’ rhythm, English often shows an identity of rhythm in sentences like the following, provided that the number of syllables does not vary too widely:

John’s at home tonight
John’s there now

The professor’s in London this evening

We speak of intonation when we associate relative prominence with pitch, the aspect of sound which we perceive in terms of ‘high’ or ‘low’; thus we can say that the ‘intonation nucleus’ in the following sentence has a ‘falling tone’ (App II.7):

The man has gone.

II.2 Stress within the word

There is a binary opposition — stress versus no stress — though it is often relevant to distinguish an intermediate or secondary stress. We mark stress with a high vertical stroke before the syllable carrying the stress, leaving lack of stress unmarked. When a stronger stress needs to be indicated, a double vertical mark is used, and where it is desirable to indicate secondary stress, there is a low vertical stroke before the syllable concerned. For example:

Several pretty women

native words and early French adoptions tend to have the main stress on the root syllable and to keep it there, regardless of the affixes that word-formation may add:

kingly
kingliness
un-kingly

stand-ing
understand-ing
misunderstand-ing

passion
passionately

By contrast, with the more recent adoptions and coinages, especially those based on words from the classical languages, the place of the stress varies according to the affixation:

telegraph
antepenultimate
penultimate

telegraphy
telegraphic

telepathy
telepathic

photograph
photography
photographic

transport
transportable
transportation

argument
argumentative
argumentation

The last two items exemplify an important generalization: all abstract nouns ending in -ion are stressed on the syllable preceding this ending.

Similar penultimate examples with adjectival -ic (App I.20):

phonetic
phonemic
economy
economic

emblem
emblematic

sympathy
sympathetic

and antepenultimate with nominal -ity and nominal or adjectival -ian:

unanimous
unanimity

library
librarian

grammar
grammarian

By contrast, -ite leaves the place of the accent unchanged:

Trotsky
Trotskyite

Jefferson
Jeffersonite

A fairly numerous set of words that can operate without affixal change as noun or adjective on the one hand, and as verb on the other, have an accentual difference in the two functions (App I.32); for example:

noun or adjective: conduct, contrast, attribute, present, etc

verb: conduct, contrast, attribute, present, etc
In one of these (contrast) and in several of the other examples that might have been cited (eg: export), there is a tendency to discontinue a separate verb form and to use in all functions the form as stressed for the noun.

II.3 Compounds
In contrast to noun phrases like a black bird, corresponding compound nouns (App I.34 ff) are generally stressed on the first element but with a strong secondary stress on the second element:

blackbird blackboard greenfly
eartquake waitingroom fire-extinguisher

When such a compound is made part of another compound, the stress and secondary stress are re-distributed to give the same rhythm: light-house but lighthouse-keeper.

A somewhat smaller number of compounds have phrasal stress pattern:

apple sauce first rate

Such compounds are often not nouns, but verbs (back-fire), adverbs (henceforth), and especially adjectives (knee-deep, flat-footed). Some examples are variable:

field marshal or field marshal; overseas or lover seas

In any case, the stress often shifts from second component to first when the compound is being used attributively in a noun phrase:

The room is downstairs but A downstairs room
His work is firstclass but His firstclass work

Note
In AmE there is a strong tendency to give initial stress to compounds, and in normal AmE use we have for example apple sauce; lawn; trends; back; fire. This stress distribution occurs quite often in BrE also.

II.4 Stress in phrases and other syntactic units
Stress distribution provides a firm basis for distinguishing between different underlying relations:

A toy factory produces toys; a toy factory is a toy
A bullfight involves bulls; a bull calf is a young bull
A French teacher teaches French; a French teacher is French
A slate quarry yields slate; a slate roof is made of slate

A heavier stress (though usually realized as an intonation nucleus: App II.7) marks the head of a lengthy premodified noun phrase, the final item of a heavily postmodified noun phrase, the last lexical item of a clause, and similar points of grammatical importance:

A realistic little toy factory
The toy factory he got for his birthday
That's the address he sent the letter to

II.5 Contrastive stress
We can interfere with normal accentuation to highlight any word we please by means of contrastive stress, again often realized by means of intonation. In this way, for example, the closed-system words like ond, of, hate (which normally have /a/) and often consonant loss as well) are pronounced with the vowel and consonant values that these words have in isolation:

A: John and Mary went /on/
B: Really! John and Mary? /and/

Contrastive stress is not limited to sequences longer than the word: the normal accentuation in the word can also be distorted at the speaker's will if he wants to make a contrastive point. Thus instead of unhapp y one might say unhappy in a context such as

A: She was looking unhappy tonight
B: You thought so? She seemed unhappy to me

Note
Contrastive stress can also override the distinctions made in App II.4: in I said she was a French teacher, not a fresh teacher, we could be referring to nationality.

II.6 Rhythm
Broadly speaking and in the absence of contrastive stress, English connected speech has stresses on the (stressed syllables of) open-class items, and absence of stress upon the closed-system words accompanying them:

He told his mother
He sent it to his mother
That's the address he sent the letter to
She was looking happy tonight

The natural rhythm of English, when unaffected by other factors such as hesitation which may slow down the speaker or excitement which may
speed him up, provides roughly equal intervals of time between the stresses (cf. App II.1).

But absolute regularity of rhythm is the exception rather than the rule. When the intervals between stresses achieve something like equality, the stylistic effect is oppressive. One exception is in counting; when we have to count a fairly large number of items, we tend to adopt quite naturally a strictly regular rhythm:

'three ...' 'four ...' 'seventeen ...' 'eighteen ...' 'nineteen ...' 
'seventy-four ...' 'seventy-five ...' 'seventy-six ...' a hundred-and-'three
'a hundred-and-'four ...'

So too when we are compiling an inventory, giving a list of names, or the like. Insistent regularity may also be introduced in religious discourse, in reading poetry, or for emphasis. In ordinary discourse, it is common when one is implying repetition of something which ought to be accepted without argument, and especially again perhaps when the speaker is expressing irritation or sarcasm:

You should 'never move the 'papers 'on my 'desk

getIntonation

II.7

Tone unit, nucleus, and the falling tone

Intonation is normally realized in tone units consisting of a sequence of stressed and unstressed syllables but on occasion the unit may consist of a single pitch-prominent syllable. The peak of greatest prominence is called the nucleus of the tone unit and it is indicated in this book by being printed in small capitals. The first prominent syllable in a tone unit is the onset, and it is commonly preceded by one or more syllables with light stress and on a low pitch. Its position can be indicated by a preceding thin vertical (') and the end of the tone unit by a thick vertical (‖). Some of the earlier examples are now given, with stresses reinterpreted where relevant:

(a) He ['told his 'mother]
(b) That's the ad['dress he 'sent the 'letter to]
(c) She was ['lookin g 'happ y to 'night]
(d) You ['thought so]
(e) She ['seemed un 'happ y to me]

Pitch prominence is usually associated with pitch change, and the com monest change is a FALL. We would expect a fall on the nuclear syllable in (a) and (b) above, as in most sentences of English. We expect a fall also in questions beginning with a wh-word, as in (f) and (h), on one-word

II.8

The rising tone

The next commonest tone is the RISE, used when we wish to indicate that our utterance is non-final or that we are leaving it open and inconclusive. This may be because we are counting or listing and have not come to the last item; or because another clause is going to follow; or because we seek a response from someone (but not by means of a wh-question):

... ['twelv e] ['thirteen] ['forty-'en] ['fifteen]
There are ['fifteen]
[When he cômes] I ['welcomed him]
I ['saw him this mûrnûng] and in[vited him to dîner]
You're [going alâady] [must you]

Some of the examples in App II.7 might well have a rising nucleus, especially (g) perhaps, not so much in order to make it a question as to suggest politely that a (confirmatory) comment would be welcome. Alternatively, one might add a tag question (7.48 f.), with a falling nucleus:

She was ['lookin g 'happ y to 'night] ['was n't she]

Since a rise lacks dogmatic finality, it enables us to make an imperative gentle and persuasive:

[Don't be un 'ples ânt]

Other nuclear tones

II.9

There are no nuclear tones anything like so common as the fall and the rise, but four other tone contours are nevertheless important. The FALL-RISE occurs in many 'contingency' environments (for example as the nucleus of a conditional clause), but it is perhaps especially common with initial adverbials (8.3):

I'll [see him if he cômes]
[if finally] we de[cided not to go]

The converse of this, the RISE-FALL, must be sharply distinguished from it since it is really a rather persuasive variant of the falling tone, used to
express a genuine or sarcastic warmth or on the other hand a feeling of
surprise or shock:

[That’s wonderful]
He’s a complete fool.

Rarest of all is the level tone. This is perhaps a variant of the rise, and
it is used to suggest (often somewhat pompously) the exact predictability
of what is to follow:

He [drank] he [stole] he was [soon despised]

II.10
The remaining tone pattern, fall-plus-rise, is probably used more
often than any other except fall and rise, but we have left it till the end be-
cause, unlike the others, this pattern has two nuclei. Especially in BrE, it
would be expected in example (e) of App II.7:

She [seemed unhappy to me]

The nucleus is always a peak of ‘information’ content in the tone unit;
with the fall-plus-rise we have two such peaks of information interest,
and they are related, the first being superordinate. When we first intro-
duced this example (App II.5), it was in order to illustrate ‘contrastive
stress’. Now contrastive stress often involves moving a tonal nucleus from
its normal, unmarked position onto the contrasted item. But this need not
entail removing all nuclear prominence from elsewhere in the sentence.
The fall-plus-rise allows the speaker to express a double contrast, and in
the present example he in effect says (a) ‘She seems unhappy rather than
happy’, and (b) ‘This is my view as opposed to yours’.
The fall-plus-rise is commonly used with marked focus (cf. 14.2 ff), with
the fall placed on the displaced and focused item, the rise on the final
lexical item in the tone unit. For example:

It’s his [wife] that I don’t like = The [one that I don’t like] is
his [wife]
It’s his [wife] that’s always nasty
beside the unmarked
I [don’t like his wife] His [wife is always nasty]

II.11
Prosodic marking compared with punctuation
In so brief a sketch we must ignore other features of oral English such as
pitch height, pitch range, tempo. Even so, we now have a system of con-
ventions capable of expressing on paper for spoken English what the sys-
tem of punctuation marks does for written English. There are numerous
respects in which conventional punctuation is inadequate, but we need
mention here only one or two such points to show how our prosodic nota-
tion both explains and transcends the difficulty.
For example, although in rather informal punctuation we can indicate
emphasis (usually by means of italics), we cannot distinguish emphases of
radically different sound and value:

(a) You shouldn’t give her any flowers
    (= You must give her no flowers at all)
(b) You shouldn’t give her any flowers
    (= You must give her only certain flowers)

But prosodic notation adequately represents the difference we hear:
(a) You [shouldn’t give her any flowers]
(b) You [shouldn’t give her any flowers]

Consider now the prosodic realizations which give sharply different
meanings to the various members within each of the following sets of
sentences; in each case we begin with the ‘unmarked’ and most neutral
form the sentence might have:

(1) I should [go]
    I should [go] (Is that your advice?)
    [I should go] (Not you!)
    I [should go] (And I defy you to deny it)
    I [should go] (But I don’t think I will)

(2) Somebody must have [taken it]
    Somebody [must have taken it] (It’s no use your arguing)
    Somebody must have [taken it] (Even if you didn’t)

(3) You [said he would come]
    You [said he would come] (I was personally doubtful)
    You [said he would come] (You didn’t say that his wife was
    coming as well)
    You [said he would come] (But that doesn’t mean he really
    will)
    You [said he would come] (And, my goodness, there he is!)

Bibliographical note
A detailed account of all prosodic systems is given in Crystal (1969), especially Chap-
ters 4 ff, and these are related to style in Crystal and Davy (1969). On stress, see Gin-
son (1970), especially Part III; Halle and Keyser (1971), Chapter 1. On rhythm, see
Abercrombie (1967), Chapter 6; Leech (1969b), Chapter 7. On AmE intonation, see
Pike (1945).
III.5 Punctuation

(1) Word division at the end of a line. Natural breaks (orthographic, syllabic, morphological) are observed; thus establishment not *establis-hment. BrE practice tends to favour morphological breaks (structure), AmE syllabic (structure).

(2) The division, especially in BrE, of words not regarded as wholly established units (anti-war, flower-power) and the function of phrasal units used as premodifiers (a case of the fourth century but a fourth-century vase: cf. 13.38 f).

III.4 The comma

The comma separates items in lists; coordinate clauses (especially those with but); adverbial clauses and phrases, especially initial ones, from subordinate clauses; a vocative from the rest of the sentence. To illustrate each in turn:

The farmer owned sheep, cattle, pigs(,) and poultry.

The lecture was good, but few people were present.

When she saw him, she burst out laughing.

John, do you know Mary's address?

A comma cannot separate subject from predicate or verb from object:

*A man of his great abilities, would always be successful.

*John thought, that the weather would improve.

Note

[a] With initial conjuncts and disjuncts, a comma is virtually obligatory, but it is often optional after adjectives: Incidentally, he sings . . .; Frankly, he chased . . .; Frequently, he works . . .: cf. 8.2.

[b] A restrictive relative clause cannot be separated by a comma from its antecedent if the noun phrase, while a non-restrictive clause is regularly so separated (13.3):

You should have asked the man who left yesterday
You should have asked Mary, who left yesterday.

III.5 Included units

The two commonest types of included unit are (1) parenthetic or subordinate matter, and (2) quotation or other reference to a different linguistic sphere. The punctuation marking such included units must be correlative, one occurrence indicating the beginning of the inclusion, a second occurrence indicating its completion.

(1) Parenthetic matter may be adverbial, appositive, or structurally unrelated. The punctuation marks are commas, parentheses ('brackets', BrE), or dashes:
The other man, David Johnson, refused to leave.
John (or perhaps his wife) will collect the parcel.
David Johnson — I don’t know why — refused to leave.

As the above examples suggest, parentheses subordinate more definitely than commas, and dashes are particularly suitable for informal ‘asides’.

(2) Direct speech is enclosed in single or double quotation marks (in BrE called also ‘inverted commas’; they are usually single, especially in print); quotation within quotation uses both to mark the distinction:

‘I heard “Keep out” being shouted,’ he explained.

Reference outside the variety of English being used is similarly marked:

A carafe of *plonk* accompanied the meal.

### III.6 Specification

The functions most commonly specified by punctuation signs are questions, exclamations, genitives, contractions, and abbreviations.

John has gone already?

Isn’t she beautiful!

In these examples, the specification signs are especially relevant since the grammatical form would otherwise suggest that the first is a statement and the second a question. The exclamation mark is, however, sparingly used in English and it does not occur with epistolary formulae or (normally) with vocatives or imperatives.

The apostrophe is used in writing the genitive singular and plural (thus marking the difference between dogs, dog’s, and dogs’) and in the informal contractions, especially of the negative particle and of auxiliaries with pronoun subjects: *John didn’t; he’ll; I’ve*.

Abbreviations by initials are indicated by capitals with or without periods (*P.T.O.*, *P.T.O*), or by lower case letters where the absence of periods is less common (*i.e.*, *e.g.*). Shortened forms of words normally have a period (*Prof*), though this need not be so if the abbreviation ends with the last letter (*Dr*).

**Note**

[a] After the initial greeting in a letter, there is either a comma (BrE, informal AmE) or a colon (AmE), the first sentence then beginning on the next line with a capital:

Dear Mr Johnson,

Several weeks have passed since...
